Narayanan, 2011-09-15 Human in the Loop Simulations is a compilation of articles from experts in the design development and use of human in the loop simulations The first section of the handbook consists of papers on fundamental concepts in human in the loop simulations such as object oriented simulation development interface design and development and performance measurement The second section includes papers from researchers who utilized HITL simulations to inform models of cognitive processes to include decision making and metacognition The last section describes human in the loop processes for complex simulation models in trade space exploration and epidemiological analyses Human in the Loop Simulations is a useful tool for multiple audiences including graduate students and researchers in engineering and computer science

Human-in-the-Loop Machine Learning Robert (Munro) Monarch, 2021-08-17 Human in the Loop Machine Learning lays out methods for humans and machines to work together effectively Summary Most machine learning systems that are deployed in the world today learn from human feedback However most machine learning courses focus almost exclusively on the algorithms not the human computer interaction part of the systems This can leave a big knowledge gap for data scientists working in real world machine learning where data scientists spend more time on data management than on building algorithms Human in the Loop Machine Learning is a practical guide to optimizing the entire machine learning process including techniques for annotation active learning transfer learning and using machine learning to optimize every step of the process Purchase of the print book includes a free eBook in PDF Kindle and ePub formats from Manning Publications About the technology Machine learning applications perform better with human feedback Keeping the right people in the loop improves the accuracy of models reduces errors in data lowers costs and helps you ship models faster About the book Human in the Loop Machine Learning lays out methods for humans and machines to work together effectively You ll find best practices on selecting sample data for human feedback quality control for human annotations and designing annotation interfaces You ll learn to create training data for labeling object detection and semantic segmentation sequence labeling and more The book starts with the basics and progresses to advanced techniques like transfer learning and self supervision within annotation workflows What s inside Identifying the right training and evaluation data Finding and managing people to annotate data Selecting annotation quality control strategies Designing interfaces to improve accuracy and efficiency About the author Robert Munro Monarch is a data scientist and engineer who has built machine learning data for companies such as Apple Amazon Google and IBM He holds a PhD from Stanford Robert holds a PhD from Stanford focused on Human in the Loop machine learning for healthcare and disaster response and is a disaster response professional in addition to being a machine learning professional A worked example throughout this text is classifying disaster related messages from real disasters that Robert has helped respond to in the past Table of Contents PART 1 FIRST STEPS 1 Introduction to human in the loop machine learning 2 Getting started with human in the loop machine learning PART 2

Human-in-the-Loop Robot Control and Learning Luka Peternel,Jan Babič,Erhan Oztop,Tetsunari Inamura,Dingguo Zhang,2020-01-22 In the past years there has been considerable effort to move robots from industrial environments to our daily lives where they can collaborate and interact with humans to improve our life quality One of the key challenges in this direction is to make a suitable robot control system that can adapt to humans and interactively learn from humans to facilitate the efficient and safe co existence of the two The applications of such robotic systems include service robotics and physical human robot collaboration assistive and rehabilitation robotics semi autonomous cars etc To achieve the goal of integrating robotic systems into these applications several important research directions must be explored One such direction is the study of skill transfer where a human operator s skilled executions are used to obtain an autonomous controller Another important direction is shared control where a robotic controller and humans control the same body tool mechanism car etc Shared control in turn invokes very rich research questions such as co adaptation between the human and the robot where the two agents can benefit from each other s skills or must adapt to each other s behavior to achieve effective cooperative task executions The aim of this Research Topic is to help bridge the gap between the state of the art and above mentioned goals through novel multidisciplinary approaches in human in the loop robot control and learning
