Consuming Architecture Daniel Maudlin, Marcel Vellinga, 2014-03-05 Projecting forward in time from the processes of design and construction that are so often the focus of architectural discourse Consuming Architecture examines the variety of ways in which buildings are consumed after they have been produced focusing in particular on processes of occupation appropriation and interpretation Drawing on contributions by architects historians anthropologists literary critics artists film makers photographers and journalists it shows how the consumption of architecture is a dynamic and creative act that involves the creation and negotiation of meanings and values by different stakeholders and that can be expressed in different voices In so doing it challenges ideas of what constitutes architecture architectural discourse and architectural education how we understand and think about it and who can claim ownership of it Consuming Architecture is aimed at students in architectural education and will also be of interest to students and researchers from disciplines that deal with architecture in terms of consumption and material culture

Planning for a Material World Laura Lieto, Robert A. Beauregard, 2015-11-06 Today urban scholars think of cities and regions as evolving through networks of human associations technologies and natural ecologies This being the case planners are faced with the task of navigating a profoundly material world Planning with and for humans alone is unacceptable in the unfolding of urban processes non human things cannot be ignored This inclusive vision has consequences for how planners envision the connections among norms technologies and life worlds as well as how they design and implement their plans The contributors to this volume utilize a variety of examples ecologically sensitive regional planning in Naples Italy congestion pricing in New York City and public participation in Europe among others to explore how planners engage a heterogeneous and restless world Inspired by assemblage thinking and actor network theory each chapter draws on this new materialism to acknowledge in quite pragmatic ways that spatial politics is a process of becoming that is inseparable from the materiality of urban practices

Urban Transformations and the Architecture of Additions Rodrigo Perez de Arce, 2014-08-07 Rodrigo Perez de Arce's essay Urban Transformations and Architectural Additions was published during the formative stages of Post Modernism at the point where theory was becoming seriously established Jencks first essays formalising the term Post Modernism in architecture and the revised Learning from Las Vegas were published the previous year In planning terms modernism had become associated with comprehensive redevelopment and forms of urban organisation that ignored context history and any sense of tradition De Arce considered the essential nature of buildings and the richness of historic urban form and explored how robust that essence was over time He looked at the value of essential remnants and rich complexities in maintaining a sense of continuity and relevance Having explored the adaptation process in history de Arce went on to see how such a process might be simulated in contemporary cities with modern buildings using additions and layers to change them from objects in infinite windswept space to being part of a rich urban fabric which described urban place To do this he used concrete examples housing schemes by James Stirling new government centres in Chandigarh and Dacca and more prosaic 60 s housing blocks The paper had a fundamental influence on the way that architects and planners thought about the nature of cities as dynamic organisms that were tangible to human beings completely opposite to the systems thinking of

the time It contributed to ideas about the importance of street place and city block which influenced so much recent regeneration practice As we enter a phase of development where the reuse and adaptation of existing buildings is becoming paramount from both an economic and sustainable point of view Perez de Arce s paper gives important insights into how to think about the process positively

Architectural Drawings as Investigating Devices Marianna Charitonidou,2023-07-10 Architectural Drawings as Investigating Devices explores how the changing modes of representation in architecture and urbanism relate to the transformation of how the addressees of architecture and urbanism are conceived The book diagnoses the dominant epistemological debates in architecture and urbanism during the 20th and 21st centuries It traces their transformations paying special attention to Le Corbusier and Ludwig Mies van der Rohe s preference for perspective representation to the diagrams of Team 10 architects to the critiques of functionalism and the upgrade of the artefactual value of architectural drawings in Aldo Rossi John Hejduk Peter Eisenman and Oswald Mathias Ungers and finally to the reinvention of architectural programme through the event in Bernard Tschumi and the Office for Metropolitan Architecture OMA Particular emphasis is placed on the spirit of truth and clarity in modernist architecture the relationship between the individual and the community in post war era architecture the decodification of design process as syntactic analogy and the paradigm of autonomy in the 1970s and 1980s architecture the concern about the dynamic character of urban conditions and the potentialities hidden in architectural programme in the post autonomy era This book is

based on extensive archival research in Canada the USA and Europe and will be of interest to architects artists researchers and students in architecture architectural history theory cultural theory philosophy and aesthetics Unorthodox Ways to Think the City Teresa Stoppani,2018-12-07 This book argues that architecture and the city and their processes can be better understood by drawing categories from disciplines that exceed the architectural and urban cultural context It performs an open intellectual reading that traverses architecture and architectural theory but also art theory and history cartography philosophy literature and cultural studies to unfold a series of figures that are ambiguously placed between the representation and the construction of space in architecture and the city The paradigm and philosophy the island and the city the map and representation the model and making and the questioning of form performed by dust are explored beyond their definition as processes that differently make space between architecture and the city and are proposed as unorthodox analytic techniques to decipher contemporary spatial complexity The book analyses how these figures have been employed at different times and in different creative disciplines beyond architecture and in relation to changing notions of space and traces the role that they have played in the shift towards the dynamic that has taken place in contemporary theory and design research What emerges is the idea of an architecture of the city that is not only physical but is largely defined by the way in which its physical spaces are regulated lived and perceived but also imagined and projected *InfoWorld* ,1992-02-03 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects **InfoWorld** ,1994-05-23 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects The Editor; the Journal of Information for Literary Workers ,1915 **The Editor** ,1915
