Abstract: Intelligent energy management in renewable-based power distribution applications, such as microgrids, smart grids, smart buildings, and EV systems, is becoming increasingly important in the context of the transition toward the decentralization, digitalization, and decarbonization of energy networks. Arguably, many challenges can be overcome, and benefits leveraged, in this transition by the adoption of intelligent autonomous computer-based decision-making through the introduction of smart technologies, specifically artificial intelligence. Unlike other numerical or soft computing optimization methods, the control based on artificial intelligence allows the decentralized power units to collaborate in making the best decision of fulfilling the administrator's needs, rather than only a primitive decentralization based only on the division of tasks. Amongst the smart approaches, reinforcement learning stands as the most relevant and successful, particularly in power distribution management applications. The reason is it does not need an accurate model for attaining an optimized solution regarding the interaction with the environment. Accordingly, there is an ongoing need to accomplish a clear, up-to-date, vision of the development level, especially with the lack of recent comprehensive detailed reviews of this vitally important research field. Therefore, this paper fulfills the need and presents a comprehensive review of the state-of-the-art successful and distinguished intelligent control strategies-based RL in optimizing the management of power flow and distribution. Wherein extensive importance is given to the classification of the literature on emerging strategies, the proposals based on RL multiagent, and the multiagent primary secondary control of managing power flow in micro and smart grids, particularly the energy storage. As a result, 126 of the most relevant, recent, and non-incremental have been reviewed and put into relevant categories. Furthermore, salient features have been identified of the major positive and negative, of each selection.

Keywords: microgrid; smart grid; multiagent; artificial intelligence; decentralization; autonomy; renewable energy

1. Introduction

The control of renewable energy in modern power distribution applications, such as microgrids, smart grids, smart buildings, and electric vehicles (EVs) applications, is experiencing a large, fundamental transition due to several technological advances and environmental considerations. For instance, the world is gearing toward the enhancement of the introduction of renewable energy and transportation based on either EVs or alternative fuels, due to their economic, technical, and environmental advantages [1]. However, the current global electricity and alternative fuel generation is still a mixed fuel, with the supremacy of fossil fuel remaining in many regions of the world. In fact, both trends are fundamentally related since the use of renewable energy in charging EVs or generating alternative fuels such as hydrogen would significantly reduce greenhouse gas emissions [2]. Optimal power distribution control is the most prominent challenge in enhancing the penetration and sustainability of renewable energy and reducing the use of fossil fuels, due

Separation of Powers in African Constitutionalism Charles M. Fombad,2016-03-03 The new series Stellenbosch Handbooks in African Constitutional Law will engage with contemporary issues of constitutionalism in Africa filling a notable gap in African comparative constitutional law Separation of Powers in African Constitutionalism is the first in the series examining one of the critical measures introduced by African constitutional designers in their attempts to entrench an ethos of constitutionalism on the continent Taking a critical look at the different ways in which attempts have been made to separate the different branches of government the Handbook examines the impact this is having on transparent and accountable governance Beginning with an overview of constitutionalism in Africa and the different influences on modern African constitutional developments it looks at the relationship between the legislature and the executive as well as the relationship between the judiciary and the political branches Despite differences in approaches between the different constitutional cultures that have influenced developments in Africa there remain common problems One of these problems is the constant friction in the relationship between the three branches and the resurgent threats of authoritarianism which clearly suggest that there remain serious problems in both constitutional design and implementation The book also studies the increasing role being played by independent constitutional institutions and how they complement the checks and balances associated with the traditional three branches of government

A Theory of Global Governance Michael Zürn,2018-03-09 This book

offers a major new theory of global governance explaining both its rise and what many see as its current crisis The author suggests that world politics is now embedded in a normative and institutional structure dominated by hierarchies and power inequalities and therefore inherently creates contestation resistance and distributional struggles Within an ambitious and systematic new conceptual framework the theory makes four key contributions Firstly it reconstructs global governance as a political system which builds on normative principles and reflexive authorities Second it identifies the central legitimization problems of the global governance system with a constitutionalist setting in mind Third it explains the rise of state and societal contestation by identifying key endogenous dynamics and probing the causal mechanisms that produced them Finally it identifies the conditions under which struggles in the global governance system lead to decline or deepening Rich with propositions insights and evidence the book promises to be the most important and comprehensive theoretical argument about world politics of the 21st century

Russian Constitutionalism Andrei Medushevsky,2006-09-27 Medushevsky examines constitutionalism in Russia from Tsarist times to the present He traces the different attitudes to constitutionalism in political thought and in practice at different periods showing how the balance between authoritarianism and liberalism has shifted In addition he discusses the importance of constitutional developments for societies in transition and concludes that post communist constitutional development in Russia is still far from complete As an empirical resource Russian Constitutionalism takes a longer historical view than other books on this topic and it also goes further than this in its interpretive approach providing a greater understanding of Russian constitutionalism
