The Role of Technology in Science: Philosophical Perspectives Sven Ove Hansson, 2015-05-05 This edited volume explores the interplay between philosophies in a wide ranging analysis of how technological applications in science inform our systems of thought Beginning with a historical background the volume moves on to explore a host of topics such as the uses of technology in scientific observations and experiments the salient relationship between technology and mechanistic notions in science and the ways in which today's vast and increasing computing power helps scientists achieve results that were previously unattainable Technology allows today's researchers to gather in a matter of hours data that would previously have taken weeks or months to assemble It also acts as a kind of metaphor bank providing biologists in particular with analogies the heart as a pump the nervous system as a computer network that have become common linguistic currency This book also examines the fundamental epistemological distinctions between technology and science and assesses their continued relevance Given the increasing amalgamation of the philosophies of science and technology this fresh addition to the literature features pioneering work in a promising new field that will appeal both to philosophers and scientific historiographers Thinking Practices in Mathematics and Science Learning James G. Greeno, Shelley V. Goldman, 2013-04-03

The term used in the title of this volume thinking practices evokes questions that the authors of the chapters within it begin to answer What are thinking practices What would schools and other learning settings look like if they were organized for the learning of thinking practices Are thinking practices general or do they differ by disciplines If there are differences what implications do those differences have for how we organize teaching and learning How do perspectives on learning cognition and culture affect the kinds of learning experiences children and adults have This volume describes advances that have been made toward answering these questions These advances involve several agendas including increasing interdisciplinary communication and collaboration reconciling research on cognition with research on teaching learning and school culture and strengthening the connections between research and school practice The term thinking practices is symbolic of a combination of theoretical perspectives that have contributed to the volume editors understanding of how people learn how they organize their thinking inside and across disciplines and how school learning might be better organized By touring through some of the perspectives on thinking and learning that have evolved into school learning designs Greeno and Goldman begin to establish a frame for what they are calling thinking practices This volume is a significant contribution to a topic that they believe will continue to emerge as a coherent body of scientific and educational research and practice **Thinking through Science and Technology** Glen Miller, Helena Mateus

Feist,Michael E. Gorman,2013 Print CourseSmart **The Artist-Philosopher in the Age of Addiction** George Smith,2025-03-17 George Smith argues that modern humanity suffers from a late stage pre fatal addiction to scientific technological thinking Like most pre fatal addictions this one will most likely result in one of three ways misery extinction or human transformation The question remains wherein lies the third way According to Smith mankind s chronic and as yet undiagnosed sickness originates in early Western metaphysics and has long been thoroughly globalized It explains

unstoppable extractionism and its relentlessly increasing by product carbon dioxide It also explains today's ever increasing rate of species extinction and the increasingly likely collapse of the biosphere Citing climate change tolerance and denial as symptomatic of pre fatal addiction Smith turns his analysis to Heidegger's question concerning technology and shows that even Heidegger had become hooked on scientific technological thinking Surrendering to his disease Heidegger steps back into meditative thought This in turn opens Heidegger to an East West mode of scientific poetic consciousness the thinking of artist philosophers such as Laozi Herderlin and Rachel Carson For Heidegger this way of thinking lays the path to mankind's transformative emancipation from an otherwise inescapable catastrophe The book will be of interest to scholars of the arts and culture histories of consciousness and climate studies

Heidegger's Conversations Katherine Davies,2024-09-01

Reading Martin Heidegger's five conversational texts together for the first time Heidegger's Conversations elaborates not only what Heidegger thought but how he did so by attending to the philosophical possibilities of the genre of these understudied texts written between 1944 and 1954 Though he wrote little on the topic of teaching and learning explicitly Katherine Davies shows Heidegger performed an implicit poetic pedagogy in his conversations that remains to be recognized Heidegger launched an experimental attempt to enact a learning of non representational non metaphysical thinking by cultivating a distinctly collaborative sensitivity to the call of the poetic Davies illustrates how each conversation emphasizes a particular pedagogical element non oppositionality making mistakes thinking in community poetic interpretation and the dangers of such pedagogy which together constitute the developmental arc of these texts Whether Heidegger is revising or reinforcing his own earlier pedagogical practices Davies argues that attending to the dramatic staging of the conversations offers a distinct vantage point from which to contend with Heidegger's philosophy and politics in the post war period

The Artist-Philosopher and Poetic Hermeneutics George

Smith,2021-12-30 Focusing on the aesthetic representation of trauma George Smith outlines the nexus points between poetics and hermeneutics and shows how a particular kind of thinker the artist philosopher practices interpretation in an entirely different way from traditional hermeneutics Taking a transhistorical and global view Smith engages artists writers

and thinkers from Western and non Western periods regions and cultures Thus we see that poetic hermeneutics reconstitutes philosophy and art as hybridizations of art and science the artist and the philosopher subject and object In turn the artist philosopher s poetic hermeneutic reconstitution of philosophy and art is meant to transform human consciousness This book will be of interest to artists and scholars working in studio practice art history aesthetics philosophy cultural studies history of ideas history of consciousness psychoanalytic studies myth studies literary studies and creative writing *Re-Thinking Science* Helga Nowotny, Peter B. Scott, Michael T. Gibbons, 2013-04-24 Re Thinking Science presents an account of the dynamic relationship between society and science Despite the mounting evidence of a much closer interactive relationship between society and science current debate still seems to turn on the need to maintain a line to demarcate them The view persists that there is a one way communication flow from science to society with scant attention given to the ways in which society communicates with science The authors argue that changes in society now make such communications both more likely and more numerous and that this is transforming science not only in its research practices and the institutions that support it but also deep in its epistemological core To explain these changes Nowotny Scott and Gibbons have developed an open dynamic framework for re thinking science The authors conclude that the line which formerly demarcated society from science is regularly transgressed and that the resulting closer interaction of science and society signals the emergence of a new kind of science contextualized or context sensitive science The co evolution between society and science requires a more or less complete re thinking of the basis on which a new social contract between science and society might be constructed In their discussion the authors present some of the elements that would comprise this new social contract *The Turn to Process* Kunal M. Parker, 2023-11-16 Explores the massive reorientation of American legal political and economic thinking from truths to methods between 1870 and 1970

Smith,Tim Hayslip,2025-02-14T00:00:00Z Thinking Systematics TSS is conceived as a toolkit for the mind designed to improve how we think about the world analyze information and pursue our goals Smith and Hayslip make a compelling argument that individual thinking and collective decision making are being systematically constrained within limits imposed by outmoded forms of cognition and the determination of privileged elites to perpetuate an unsustainable status quo The dialectical reasoning advocated in this wide ranging book aims to overcome those limits and to allow a much more profound understanding of the human condition in the 21st century Mainstream problem solving focuses almost exclusively on scientific technological fixes on one side and moral cultural remedies on the other But to comprehend our world adequately far more serious attention must be given to the specifically social economic and political arrangements shaping our lives Once embraced by growing numbers of people TSS strategies methods and habits of thought can contribute significantly to a new common sense one adequate to meeting the immense challenges facing humanity in our era
