## Scientific Procedures:

Scientific Procedures L. Tondl, 2012-12-06 For a decade we have admired the incisive and broadly informed works of Ladislav Tondl on the foundations of science. Now it is indeed a pleasure to include this book among the Boston Studies in the Philosophy of Science. We hope that it will help to deepen the collaborative scholarship of scientists and philosophers in Czechoslovakia with the English reading scholars of the world. Professor Ladislav Tondl was born in 1924 and completed his higher education at the Charles University in Prague. His doctorate was granted by the Institute of Information Theory and Automation. He was a professor and scientific research worker at the Institute for the Theory and Methodology of Science, which was a component part of the Czechoslovak Academy of Sciences. Tondl's principal fields of interest are the methodology of the empirical and experimental sciences, logical semantics, and cybernetics. For many years he collaborated with Professor Albert Perez and others at the Institute of Information Theory and Automation in Prague, and he has undertaken fruitful collaboration with logicians in the Soviet and Polish schools and been influenced by the Finnish logicians as well among them Jaakko Hintikka. We list below a selection of his main publications. Perhaps the most accessible in presenting his central conception of the relationship between modern information theory and the methodology of the sciences is his 1965 paper with Perez, On the Role of Information Theory in Certain Scientific Procedures. Statistics of scientific procedures on living animals Great Britain: Home Office, 2011-07-13 Statistics of scientific procedures on living Animals Great Britain 2010 The Scientific Process S.D. Ross, 2012-12-06 Some preliminary observations must be made concerning the nature and purpose of this study. What I have attempted here is an essay in the metaphysics of science and not the philosophy of science. Rather than concentrating on the details of theory construction and the formal structure of scientific systems, I have treated science as an enterprise, a developing process within human experience. I have used such an approach in order to analyze science in its relationship to other human enterprises such as art and philosophy and to clarify its unique goals and characteristics. Often the concepts employed in descriptions of scientific methods are conceived too narrowly by broadening the focus of attention. I have attempted to characterize in a fairly general fashion the goals and methods of science. This has led to formulations which may seem at first glance to depart radically from some well established distinctions of the philosophy of science. I hope that it will be clear, however, that such formulations arise at a different level of analysis and concern very different problems from those of the logic of science. In particular, I am concerned with the general goals of science. These must not be confused with the narrower principles of method employed in science at any given time. The Journal of Philosophy, Psychology and Scientific Methods, 1920 *The Bureaucracy of Empathy* Shira Shmueli, 2023-07-15 *The Bureaucracy of Empathy* revolves around two central questions: What is pain? And how do we recognize, understand, and ameliorate the pain of nonhuman animals? Shira Shmueli investigates these ethical issues through a close and careful history of the origins, implementation, and enforcement of the 1876 Cruelty to Animals Act of Parliament.

which for the first time imposed legal restrictions on animal experimentation and mandated official supervision of procedures calculated to give pain to animal subjects Exploring how scientists bureaucrats and lawyers wrestled with the problem of animal pain and its perception Shmueli traces in depth and detail how the Act was enforced the medical establishment's initial resistance and then embrace of regulation and the challenges from anti vivisection advocates who deemed it insufficient protection against animal suffering She shows how a bureaucracy of empathy emerged to support and administer the legislation navigating incongruent interpretations of pain This crucial moment in animal law and ethics continues to inform laws regulating the treatment of nonhuman animals in laboratories farms and homes around the world to the present

Legislation relating to animals has ancient origins and in many civilizations certain species have held particular significance be it religious cultural nutritional or sporting As a general rule the law was primarily concerned with animals as property rather than in need of protection until the 19th century Since the 1970s animal law has proved to be a growth area in the production and enforcement of both national and international legislation This has been particularly so in the areas of conservation and welfare and there has been extensive legal and philosophical consideration of the status of animals This book is not intended to be a standard text but rather a handbook in the true sense a guide for the lay person namely to help the non lawyer to understand the basic concepts of animal law and to provide the lawyer who is the lay person in the world of animal science with an introduction to relevant concepts and literature which are not normally found in the conventional legal texts *Animal Welfare: Limping Towards Eden* John Webster, 2008-04-15
