The Justification of Science and the Rationality of Religious Belief Michael C. Banner, 1987 **Life Theories; Their Influence Upon Religious Thought** Lionel S 1828-1906 Beale, 2023-07-18 Written by the British physician and microscopist Lionel Smith Beale this book explores the relationship between scientific theories and religious beliefs Beale argues that advances in science have had a profound impact on how people understand the nature of life and the soul and he examines the ways in which religious thinkers have responded to these developments A fascinating exploration of the intersection between science and religion This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant **The Justification of Science and the Rationality of Religious Belief** Michael C. Faith, Hope and Doubt in Times of Uncertainty George Ellis, 2008 Given contemporary attacks on religious faith this lecture asks what are the intellectual resources and sources of spirituality that can sustain us in these times of uncertainty It suggests that human moral life is a search to understand and implement that true nature of morality It is centred in love with the idea of kenosis letting go playing a key role because of its transformational qualities This book argues the various scientific realities are all partial and inadequate Science can be powerful in the service of an integral view but must not attempt to supplant it Religion is still a key context for a consideration of ethics aesthetics metaphysics and meaning

The Religion of Science Paul Carus, 1896 **A Theology of Science** Robert Trundle, 2007-06 This book reveals a remarkable oddity about the mainstream philosophy of science While rejecting a noxious relativism it is unable to ascribe truth to scientific theories that also are divorced conceptually from ethics and politics There is much at stake since these dilemmas have led to a politicized truth whereby truth in these areas is often decided ideologically But the ideology and splintered areas collide head on with our awareness of ourselves and the world By relating a world of which we are phenomenologically conscious to a common sense reasoning a novel case is made for objective scientific truth a true causal principle and the principle's implication of a First Cause This Cause as a Creator of Nature begets moral norms intrinsic to scientific descriptions of our psycho biological nature since our nature was created as it ought to be affording a naturalistic ethics that can be as true as the science that informs it Medicine and its allied sciences are used to illustrate this moral import in terms of a revitalized support of the traditional family a perennial norm expressed by the dictum As the family goes so goes the state Thus a state's support of the family exemplifies how normative political claims can be as true as a scientific ethics that informs them The logical link of ethics to science and politics marks the reasoning implicit in a natural theology common to the major monotheistic religions And so despite the faults of all organizations this book suggests one reason why those religions flourished over the ages Outlasting the Roman Empire and modern ideologies that boasted vainly of reigning to the end of history the religions address a personal spirituality and fulfill human nature They render coherent an experienced world where truth coincides in science ethics politics and religion

REVIEW This book is one of those exceptional works which is both challenging in its philosophical sophistication and edifying in its moral argumentation The Review of Metaphysics Sept 2008 by Tom Michaud Read complete review at link below The Review of Metaphysics Vol 62 245 Sep 2008

Science, Religion and Reality Joseph Needham, 1925 [The Justification of Science and the Rationality of Science and the Rationality of Religious Belief](#) Michael C. Banner, 1990 **For Both Religion and Science** W. Curt Grosse, 2013-10 This is a new release of the original 1936 edition *On Some of the Characteristics of Belief, Scientific and Religious* John Venn, 1997 *The Mind of the Universe* Mariano Artigas, 2000 The Mind of the Universe written by a philosopher and physicist provides a study in which a competent presentation of physical

discoveries is combined with a rational search for philosophical presuppositions of science. An important contribution to the dialogue between religion and science it will inspire new attempts at bridging science and philosophy in their common search for the hidden meaning of the new scientific theories.

Rationality and Science Roger Trigg, 1993. Can science hope to provide a Theory of Everything, a final explanation of the nature of the Universe? Is science our sole source of knowledge? These questions are being increasingly asked and yet at the same time many distrust science and have become disillusioned with its effects on our world. Can science and scientific practice be justified? What are the rational foundations of science? Many contemporary philosophers are bewitched by the idea that there must be some neutral ground or a God's eye view to which we can appeal when we wish to justify a whole conceptual scheme. The impossibility of finding one drives many to relativism. How far can reason and the idea of reality be upheld in the face of this criticism? In this important new book Professor Trigg faces these issues squarely and examines how far it is possible to give reasons for trusting science. In defending a realist outlook Trigg aims to show that even physical science must be given metaphysical foundations. In so doing he explains and evaluates the views of Rorty, Wittgenstein, Quine, Putnam and Hawking amongst others. The limits of science and rationality are explored and the power of human reason is in the end upheld.

Rationality and Belief in Human Evolution Dan M. Kahan, 2016. This paper examines two opposing theories of disbelief in evolution. One, the bounded rationality account, attributes disbelief to the inability of individuals to suppress the strongly held intuition that all functional systems, including living beings, originate in intentional agency. The other, the expressive rationality account, holds that positions on evolution arise from individuals' tendency to form beliefs that signal their membership in and loyalty to identity-defining cultural groups. To assess the relative plausibility of these theories, the paper analyzes data on the relationship between study subjects' beliefs in evolution, their religiosity, and their scores on the Cognitive Reflection Test (CRT), a measure of critical reasoning proficiencies including the disposition to interrogate intuitions in light of available evidence. Far from uniformly inclining individuals to believe in evolution, higher CRT scores magnified the division between relatively religious and relatively nonreligious study subjects. This result was inconsistent with the bounded rationality theory, which predicts that belief in evolution should increase in tandem with CRT scores for all individuals regardless of cultural identity. It was more consistent with the expressive rationality theory, under which individuals of opposing cultural identities can be expected to use all the cognitive resources at their disposal to form identity-congruent beliefs. The paper discusses the implications for both the study of public controversy over evolution and the study of rationality and conflicts over scientific knowledge generally.

The Influence of Scientific and Religious Belief on Coping with Moral Uncertainty Jonathan Randal Teters, 2017. Research has shown that individuals often subscribe to an explanatory belief system to make sense of the world around them. Although the most well-studied explanatory belief system has been religion, for some people a commitment to science serves some of the same functions as religion, such as increasing well-being, reducing anxiety, and providing guidelines for making

moral judgments of others The goal of this study was to determine if belief in science sometimes serves as a functional equivalent to religion in terms of allowing an individual to evaluate the morality of their own actions If science serves a role similar to religion in terms of providing moral guidance individuals with a moralized belief in science should feel shame and guilt over moral transgressions when their beliefs are made salient an effect that has been observed among religious individuals whose beliefs are salient This study took was conducted in two waves In wave 1 participants completed the Santa Clara Strength of Religious Faith Questionnaire the Moralized Religiosity scale the Belief in Science scale and the Moralized Rationality Scale in order to assess the strength of their beliefs in religion and science and how strongly they moralized these beliefs In wave 2 participants completed a sentence unscrambling task in either a control condition a condition with science priming words or a condition with religious priming words Participants were then asked to reflect and write about a situation in their past in which they were unsure about the morality of their actions Finally participants completed a shortened version of the State Trait Anxiety Inventory and answered questions to assess their state guilt The results of the study indicated that religious individuals tended to be less anxious and individuals high in scientific belief tended to report higher levels of guilt Contrary to predictions religious individuals who were exposed to religious primes tended to feel lower levels of guilt Religious individuals also reported lower levels of anxiety when exposed to scientific primes These findings indicate that religion and belief in science do not appear to serve equivalent roles as belief systems Making scientific beliefs salient had no effect on guilt or anxiety in those who moralize scientific belief but making religious belief salient decreased guilt in religious individuals The implications of these findings are discussed in detail
