Moving Objects Management Xiaofeng Meng,Jidong Chen,2011-01-27 We live in an age of rapid technological development The Internet already affects our lives in many ways Indeed we continue to depend more and more intrinsically on the Internet which is increasingly becoming a fundamental piece of societal infrastructure just as water supply electricity grids and transportation networks have been for a long time But while these other infrastructures are relatively static the Internet is undergoing swift and fundamental change Notably the Internet is going mobile The world has some 6 7 billion humans 4 billion mobile phones and 1 7 billion Internet users The two most populous continents Asia and Africa have relatively low Internet penetration and hold the greatest potentials for growth Their mobile phone users by far outnumber their Internet users and the numbers are growing rapidly China and India are each gaining about half a dozen million new phone users per month Users across the globe as a whole increasingly embrace mobile Internet devices with smart phone sales are starting to outnumber PC sales Indeed these and other facts suggest that the Internet stands to gain a substantial mobile component This mega trend towards mobile is enabled by rapid and continuing advances in key technology areas such as mobile communication consumer electronics g positioning and computing In short this is the backdrop for this very timely book on moving objects by Xiaofeng Meng and Jidong Chen

Generalized Jeffrey Conditionalization Dirk Draheim,2017-11-06 This book provides a frequentist semantics for conditionalization on partially known events which is given as a straightforward generalization of classical conditional probability via so called probability testbeds It analyzes the resulting partial conditionalization called frequentist partial F P conditionalization from different angles i e with respect to partitions segmentation independence and chaining It turns out

that F P conditionalization meets and generalizes Jeffrey conditionalization i e from partitions to arbitrary collections of events opening it for reassessment and a range of potential applications A counterpart of Jeffrey s rule for the case of independence holds in our frequentist semantics This result is compared to Jeffrey s commutative chaining of independent updates The postulate of Jeffrey s probability kinematics which is rooted in the subjectivism of Frank P Ramsey is found to be a consequence in our frequentist semantics This way the book creates a link between the Kolmogorov system of probability and one of the important Bayesian frameworks Furthermore it shows a preservation result for conditional probabilities under the full update range and compares F P semantics with an operational semantics of classical conditional probability in terms of so called conditional events Lastly it looks at the subjectivist notion of desirabilities and proposes a more fine grained analysis of desirabilities a posteriori This book appeals to researchers who are involved in any kind of knowledge processing systems F P conditionalization is a straightforward fundamental concept that fits human intuition and is systematically linked to one of the important Bayesian frameworks As such the book is interesting for anybody investigating the semantics of reasoning systems
