Longair, 2003-12-04 A highly original and truly novel approach to theoretical reasoning in physics This book illuminates the subject from the perspective of real physics as practised by research scientists It is intended to be a supplement to the final years of an undergraduate course in physics and assumes that the reader has some grasp of university physics By means of a series of seven case studies the author conveys the excitement of research and discovery highlighting the intellectual struggles to attain understanding of some of the most difficult concepts in physics Case studies include the origins of Newton's law of gravitation Maxwell's equations mechanics and dynamics linear and non linear thermodynamics and statistical physics the origins of the concepts of quanta special relativity general relativity and cosmology The approach is the same as that in the highly acclaimed first edition but the text has been completely revised and many new topics introduced

Valdez, 2022-07-13 *Metaphysics Reconsidered* A Gnostic Reading of Kant By Juan Valdez This work sits at the tail end of a progression of studies into theology mysticism and philosophy which reaches its apex here philosophically It builds off of the understanding of the shared foundations of theological mystical and philosophical knowledge from antiquity that we explore in *Theology Reconsidered* and *Homo Mysticus* that have supported the development of advanced societies throughout human history and conjoins this knowledge with more modern conceptions of the world as reflected in scientific disciplines such as physics psychology and biology to establish a new system of metaphysics a postmodern system of metaphysics which accounts for philosophical skepticism as well as physical materialism and has both a psychological as well as physical element to it the world as it appears and the world as it is in Kantian terms In creating this model we first illustrate the

deficiencies of the prevailing metaphysical paradigm one that reflects a deep seated belief in the ontological supremacy of objective reality and find the source of these deficiencies point them out and then make some adjustments to the underlying system Kantian metaphysics primarily such that its misguided conclusions are both brought to light and at the same time corrected In so doing we in effect root our system of metaphysics the Metaphysics of Awareness directly into the Western philosophical tradition

Planck Brandon R. Brown,2015-05-01 Max Planck is credited with being the father of quantum theory and his work was described by his close friend Albert Einstein as the basis of all twentieth century physics But Planck's story is not well known especially in the United States A German physicist working during the first half of the twentieth century his library personal journals notebooks and letters were all destroyed with his home in World War II What remains other than his contributions to science are handwritten letters in German shorthand and tributes from other scientists of the time In *Planck Driven by Vision Broken by War* Brandon R Brown interweaves the voices and writings of Planck his family and his contemporaries with many passages appearing in English for the first time to create a portrait of a groundbreaking physicist working in the midst of war Planck spent much of his adult life grappling with the identity crisis of being an influential German with ideas that ran counter to his government During the later part of his life he survived bombings and battlefields surgeries and blood transfusions all the while performing his influential work amidst a violent and crumbling Nazi bureaucracy When his son was accused of treason Planck tried to use his standing as a German national treasure and wrote directly to Hitler to spare his son's life Brown tells the story of Planck's friendship with the far more outspoken Albert Einstein and shows how his work fits within the explosion of technology and science that occurred during his life This story of a brilliant man living in a dangerous time gives Max Planck his rightful place in the history of science and it shows how war torn Germany deeply impacted his life and work

Flight from Wonder Albert Rothenberg, 2015 Scientific breakthroughs have had far reaching social and physical effects on modern civilization yet until recently there have been relatively few investigations into the nature of scientific creativity itself *Flight from Wonder* reports the findings from an empirical study of 42 Nobel laureates in science from the United States and Europe concerning the creative processes that yield scientific innovation To this end Albert Rothenberg designed an interview scheme to delineate the content and sequences of processes that lead scientists to specific creative achievements He conducted interviews with Nobel laureates in the fields of medicine physiology physics and chemistry while carrying out matching interviews with a control group consisting of twelve accomplished engineers on the faculty of a leading engineering university Rothenberg's results demonstrate that the Nobel laureates perform three distinct cognitive creative processes to achieve key formulations and discoveries the detailed nature and structure of these findings were reviewed and corroborated by each of the Nobel laureates To supplement his findings Rothenberg engages with autobiographical accounts and work in progress manuscripts pertaining to the creative discoveries of outstanding scientists of the past including Albert Einstein Charles Darwin Max Planck Neils Bohr Hideki Yukawa and James Watson The book will interest students and general science readers fascinated by the development of scientific inquiry and innovation

The Matter of Facts Gareth Leng, Rhodri Ivor Leng, 2020-04-14 How biases the desire for a good narrative reliance on citation metrics and other problems undermine confidence in modern science Modern science is built on experimental evidence yet scientists are often very selective in deciding what evidence to use and tend to disagree about how to interpret it In *The Matter of Facts* Gareth and Rhodri Leng explore how scientists produce and use evidence They do so to contextualize an array of problems confronting modern science that have raised concerns about its reliability the widespread use of inappropriate statistical tests a shortage of replication studies and a bias in both publishing and citing positive results Before these problems can be addressed meaningfully the authors argue we must understand what makes science work and what leads it astray The myth of science is that scientists constantly challenge their own thinking But in reality all scientists are in the business of persuading other scientists of the importance of their own ideas and they do so by combining reason with rhetoric Often they look for evidence that will support their ideas not for evidence that might contradict them often they present evidence in a way that makes it appear to be supportive and often they ignore inconvenient evidence In a series of essays focusing on controversies disputes and discoveries the authors vividly portray science as a human activity driven by passion as well as by reason By analyzing the fluidity of scientific concepts and the dynamic and unpredictable development of scientific fields the authors paint a picture of modern science and the pressures it faces

Thomas Kuhn Alexander Bird, 2014-12-18 Thomas Kuhn 1922-96 transformed the philosophy of science His seminal 1962 work *The Structure of Scientific Revolutions* introduced the term paradigm shift into the vernacular and remains a fundamental text in the study of the history and philosophy of science This introduction to Kuhn's ideas covers the breadth of

his philosophical work situating *The Structure of Scientific Revolutions* within Kuhn's wider thought and drawing attention to the development of his ideas over time Kuhn's work is assessed within the context of other philosophies of science notably logical empiricism and recent developments in naturalized epistemology The author argues that Kuhn's thinking betrays a residual commitment to many theses characteristic of the empiricists he set out to challenge Kuhn's influence on the history and philosophy of science is assessed and where the field may be heading in the wake of Kuhn's ideas is explored **The**

Scientific Freedom Donald W. Braben, 2020-09-10 A radical and timely proposal for reinvigorating transformative scientific discovery So rich was the scientific harvest of the early 20th century that it transformed entire industries and economies Max Planck laid the foundation for quantum physics Barbara McClintock for modern genetics Linus Pauling for chemistry the list goes on In the 1970s the nature of scientific work started to change Increases in public funding for scientific research brought demands that spending be justified a system of peer review that selected only the research proposals promising the greatest returns and a push for endless short term miracles instead of in depth boundary pushing research A vicious spiral of decline began In *Scientific Freedom* Donald W Braben presents a framework to find and support cutting edge much needed scientific innovation Braben who led British Petroleum's Venture Research initiative which aimed to identify and aid researchers challenging current scientific thinking explains The conditions that catalyzed scientific research in the early 20th century The costs to society of our current research model The changing role of the university as a research institution How BP's Venture Research initiative succeeded by minimizing bureaucracy and peer review and the program's impact The selection budget

and organizational criteria for implementing a Venture Research program today Even in the earliest stages transformative and groundbreaking research can look unrecognizable to those who are accustomed to the patterns established by the past Support for this research can in fact be low risk and offer rich rewards but it requires rethinking the processes used to discover and sponsor scientists with groundbreaking ideas and then giving those innovators the freedom to explore First published in 2008 this new edition of Scientific Freedom includes over 30 redesigned charts and figures and a new foreword by Donald Braben
