Universal Jurisdiction: The Sierra Leone Profile Justice Bankole Thompson,2015-03-12 The doctrine of universal jurisdiction has evolved throughout modern times in the context of global criminal justice as a paramount agent of combating impunity emanating from international criminality Sierra Leone as a

member of the international community and the United Nations has in recent times been a pioneer in the progressive application and development of international criminal law in the African region. Despite this role, the country's profile, both in terms of the incorporation and application of the doctrine of universal jurisdiction, is deficient in several major respects, falling far short of its dual international obligation not to provide safe havens from justice for perpetrators of international crimes and to combat impunity from such criminogenic acts. Hence, a compelling reason for the author to write this book was to provide a seminal scholarly work on the subject, articulating the existing state of the law in Sierra Leone and highlighting the deficiencies in the law and factors inhibiting the exercise of universal jurisdiction in this UN member state. It was also to propose necessary substantive and procedural law reforms in the state's jurisprudence on the subject. The book is recommended reading for practitioners and scholars in international criminal law and related disciplines. Its accessibility is highly enhanced by relevant tables and summaries of each chapter.

Justice Rosolu J. B. Thompson is Professor Emeritus of Criminal Justice Studies, Eastern Kentucky University, USA. He was a member of and Presiding Judge in Trial Chamber I of the Special Court for Sierra Leone.

Theories of Change Karen Wendt, 2021-05-07

Today it has become strikingly obvious that companies no longer operate in an environment where only risk, return, and volatility describe the business environment. The business has to deal with volatility plus uncertainty plus complexity and ambiguity (VUCA) that requires new qualities, competencies, frameworks, and it demands a new mind set to deal with the VUCA environment in investment funding and financing. This book builds on a new megatrend beyond resilience called anti-fragility. We have had the black swan financial crisis and the red swan COVID. The Bank for International Settlements is preparing for regenerative capitalism, block chain based analysis of financial streams, and is aiming to prevent the Green Swan, the climate crisis, to lead to the next lockdown. In the light of the UN 17 Sustainable Development Goals, what is required is Theories of Change. Written by experts working in the fields of sustainable finance, impact investing, development finance, carbon divesting, innovation scaling, finance impact, entrepreneurship, social stock exchanges, alternative currencies, Initial Coin Offerings (ICOs), ledger technologies, civil action, co-creation, impact management, deep learning, and transformation leadership, the book begins by analysing existing Theories of Change frameworks from various disciplines and creating a new integrated model, the meta framework. In turn, it presents insights on creating and using Theories of Change to redirect investment capital to sustainable companies while implementing the Sustainable Development Goals and the Paris Climate Agreement. Further, it discusses the perspective of planetary boundaries as defined by the Stockholm Resilience Institute and investigates various aspects of systems, organizations, entrepreneurship, investment, and finance that are closely tied to the mission ingrained in the Theory of Change. As it demonstrates solutions that ensure the parity of profit, people, and planet through dynamic change, it can effectively address the needs of entrepreneurs and business. By exploring these concepts and their application, the book helps create and shape new markets and opportunities.

Sustainable Development Rumen Gechev, 2005

The criteria for sustainable

development have become a decisive factor in the formulation and assessment of economic policy models. By its nature, sustainable development is a multidimensional category; therefore, it requires an interdisciplinary approach. This study is focused on the economic aspects of sustainable development. However, the analysis includes the interdependences of the noneconomic dimensions. The author proposes a new definition for sustainable development that incorporates those dimensions and suggests a new GDP matrix that better integrates the quantitative and the qualitative parameters of the economic output including its effect on the environmental equilibrium.

Advances in Visual Information Systems Robert Laurini, 2000-10-18. Presently in our world, visual information dominates. The turn of the millenium marks the age of visual information systems. Enabled by picture sensors of all kinds, turning digital visual information will not only enhance the value of existing information; it will also open up a new horizon of previously untapped information sources. There is a huge demand for visual information access from the consumer. As well, the handling of visual information is boosted by the rapid increase of hardware and Internet capabilities. Advanced technology for visual information systems is more urgently needed than ever before, not only new computational methods to retrieve, index, compress, and uncover pictorial information, but also new metaphors to organize user interfaces. Also, new ideas and algorithms are needed which allow access to very large databases of digital pictures and videos. Finally, we should not forget new systems with visual interfaces integrating the above components into new types of image, video, or multimedia databases and hyperdocuments. All of these technologies will enable the construction of systems that are radically different from conventional information systems. Many novel issues will need to be addressed: query formulation for pictorial information, consistency management thereof, indexing, and assessing the quality of these systems. Historically, the expression Visual Information Systems can be understood either as a system for image information or as a visual system for any kind of information.
