Beers, 2013-06-29 In this volume of the series *Human Brain Function Assessment and Rehabilitation* we cover the area of how brain function is assessed with behavioral or neuropsychological instruments These assessments are typically conducted by clinical neuropsychologists or behavioral neurologists and so we made an effort to present the somewhat differing approaches to these two related disciplines Clinical neuropsychologists are psychologists who typically utilize standardized tests while behavioral neurologists are physicians who generally assess brain function as part of the

clinical neurological evaluation Both approaches have much to offer The basic assumption of neuropsychological assessment is that the brain is the organ of behavior and therefore the condition of the brain may be evaluated with behavioral measures Neuropsychological tests are those measures found by research to be particularly sensitive to alterations in brain function An adequate neuropsychological test is a procedure that can be related to some objective measure of alteration in brain function Over the years these objective measures have changed but generally involve documentation through direct observation of brain tissue or through histological pathological neuroimaging or other laboratory procedures The methods described in the first two volumes of this series describe the neuroimaging procedures that are often used in the validation of neuropsychological tests

Neuropsychological Assessment of Neuropsychiatric and Neuromedical Disorders Igor Grant, Kenneth Adams, 2009-03-10 This is a major revision of a standard reference work for neuropsychologists psychiatrists and neurologists About one half of the book contains entirely new work by new contributors New topics not covered in the previous editions include consideration of common sources of neurocognitive morbidity such as multiple sclerosis diabetes and exposure to heavy metals psychiatric and behavioral disorders associated with traumatic brain injury neuropsychology in relation to everyday functioning the effects of cognitive impairment on driving skills and adherence to medical treatments The Third Edition aims to reflect the enormous developments in neuropsychology in terms of research clinical applications and growth of the discipline during the past decade At one time focused on mapping the cognitive and related consequences of brain injuries research in neuropsychology has now expanded to much broader considerations of the effects of systemic disease infection medications and inflammatory processes on neurocognition and emotion The Third Edition attempts to capture these developments while continuing to adhere to the objective of presenting them in a concise manner in a single volume
