Screening For Down's Syndrome:

Screening for Down's Syndrome J. G. Grudzinskas, 1994-11-17 This important new publication summarises the recent exciting advances in screening for Down's syndrome. It addresses important clinical questions such as risk assessment, who to screen, when to screen, which techniques to use, and the organisation of screening programmes nationally and internationally. An international and authoritative team of authors has been invited to assess the latest developments in this rapidly advancing area. The volume provides a critical and much needed evaluation of the potential and limitations of new and established techniques for screening for Down's syndrome. It will serve as an essential source of information for all those involved in pre-natal diagnosis and the provision of obstetric care.

Screening for Down Syndrome in the First Trimester Jurgis Gediminas Grudzinskas, R. Humphry T. Ward, 1997 This book provides a concise yet comprehensive source of current information on Down syndrome. Research workers, scientists, medical graduates, and paediatricians will find it an excellent source for reference and review. This book focuses on exciting areas of research on prenatal diagnosis, Down syndrome screening after assisted reproduction techniques, noninvasive techniques, genetic counselling, and ethical issues. Whilst aimed primarily at research workers on Down syndrome, we hope that the appeal of this book will extend beyond the narrow confines of academic interest and be of interest to a wider audience, especially parents and relatives of Down syndrome patients.

Guide to Clinical Preventive Services DIANE Publishing Company, 1997-03 An exhaustive report on recommended clinical preventive services that should be provided to patients in the course of routine clinical care, including screening for vascular, neoplastic, and infectious diseases, and metabolic, hematologic, ophthalmologic, and ontologic prenatal and musculoskeletal disorders. Also, mental disorders and substance abuse counseling and immunization. The majority of deaths below age 65 are preventable. This Guide results from the most comprehensive evaluation and synthesis of preventive interventions to date.

Screening in Disease Prevention Walter Werner Holland, Susie Stewart, 2005 Screening for disease has become a widely accepted concept in health care. Screening in Disease Prevention takes a critical look at the practice of screening throughout the various stages of life. The book highlights three current challenges: the increasing consumer media and commercial focus on health in general and screening in particular; providing accurate and understandable information; and tackling the continuing variation in the uptake of screening between different areas of the country and different socio-economic groups. Screening in Disease Prevention is important reading for public health professionals, particularly those involved in screening programs. Policy makers and shapers, medical researchers, pressure groups, and support organizations for people with screenable conditions will also find it a valuable reference.
