Luria Nebraska Neuropsychological Batter:

Item Interpretation of the Luria-Nebraska Neuropsychological Battery ,1982-01-01 The Luria Nebraska Neuropsychological Battery is a relatively new neurodiagnostic test and there is a growing demand for material on the more advanced aspects of its interpretation This book organized around the theoretical meaning of items the empirical correlations between items and the factor structure of the individual scales is a first response to that demand It will serve to give greater understanding of the psychological skills that underlie each item on the Luria Nebraska battery an understanding prerequisite to the techniques of syndrome analysis described in the writings of A R Luria and it will be particularly useful to those who have limited experience with actual case material The major part of the book is an analysis of each Luria Nebraska scale either item by item or as a unit For each scale the authors examine the theoretical intent of the items and the underlying skills according to Luria s theory They then present the results of item interrelations analysis to determine whether the items tap common skills Finally they describe the factor structure of the various scales exploring the interrelations of items within each scale In addition to analyzing the behavioral scales of the Luria Nebraska battery the book reviews a number of other empirical scales that further aid interpretation particularly the experimental localization scales that tap focal deficits in specific areas of the brain Also included are case histories that illustrate the process of diagnosis in patients who receive a series of Luria Nebraska batteries over the course of their treatment Finally the authors briefly discuss subcortical disorders an issue often ignored in clinical neuropsychological testing

Item Interpretation of the Luria-Nebraska Neuropsychological Battery Charles J. Golden,1982 **Clinical Application of Neuropsychological Test Batteries** Charles J. Golden,Gerald Goldstein,Theresa M. Incagnoli,2013-11-11 Clinical neuropsychology has become a field of major prominence during the past several years as well as a field of great complexity As a result of the extensive amount of activity that neuropsychology has experienced recently two major developments have emerged First several approaches have evolved regarding comprehensive neuro psychological assessment There are presently several standard test batteries in common use as well as an approach to assessment that does not make use of standard batteries but rather fits the evaluation accomplished to the particular diagnostic problems presented by the individual patient Second a great deal of specialization has emerged with assessment procedures developed for evaluation of specific types of neuropsychological deficit The purpose of this volume is to review these developments particularly with

reference to their implications for application in clinical settings The history of this book s development is of particular interest Some years ago the Veterans Administration became concerned with developing an optimal method of neuropsychological assessment for its many health care related facilities Initially the problem was conceptualized in terms of whether the VA should encourage wider use of the long established Halstead Reitan Neuropsychological Test Battery HRB or promote more extensive use of the recently developed Luria Nebraska Neuropsychological Test Battery LNNB A conference was funded to bring together authorities in clinical neuropsychology to discuss this matter and present a series of papers to invited psychologists from various VA facilities

LNNB Charles J. Golden,1985 Luria-Nebraska Neuropsychological Battery ,1980 *The Halstead-Reitan Neuropsychological Battery and the Luria-Nebraska Neuropsychological Battery When to Use Which?* L. I. Cripe,MADIGAN ARMY MEDICAL CENTER TACOMA WA.,1983 There are many assessment procedures and strategies in neuropsychology for determining the status of higher cortical functions Lezak 1983 Of these many approaches the Halstead Reitan Battery and the more recent Luria Nebraska Battery LNB are among the most frequently used by clinicians These two approaches are somewhat different in their origins underlying theories and administration Both have demonstrated an ability to discriminate between groups with and without brain dysfunction Golden 1981 The HRB has been in clinical operation for many years allowing numerous studies to be conducted with persons of varying neuropathologies Reitan and Davison 1974 The HRB has proven to discriminate the gamut of neuro behavioral dysfunctions to include the more subtle disorders e g seizure disorders mild closed head injuries learning disabilities transient ischemic attacks etc The LNB has not been available long enough to establish its ability to discriminate these more subtle disorders but there is some evidence to indicate that the potential exists
