Managing Green Technologies For Global Competitiveness:

Managing Green Technologies for Global Competitiveness Christian Madu, 1996-01-09 Environmental quality management is seen as a competitive strategy that could help a firm improve its bottom line. It is argued that being environmentally correct is good business that can provide competitive advantage to the firm in the long term and help it to survive and remain in business. To achieve environmental quality, top management must take the lead and refocus its objectives by redefining its customers. Rather than a focus only on direct customers who are consumers of the product, emphasis should be on the stakeholders of the environment since they can potentially influence the cost of doing business. The book starts by tracing the relationship between technology and the environment. Clearly, the quality of life we enjoy today is to a large extent a result of technological advances. However, environmental pollution is a byproduct of such advances and has contributed to declining the quality of life. Sustainable development is increasingly seen as a way of both maintaining technological advances and environmental quality. However, many have argued against sustainable development without looking at its long term goals and its potential of helping a business improve its bottom line and competitiveness. Clearly, there is a need for strategic planning in order to remain competitive through environmental quality planning. A corporate environmental quality model is therefore needed. Environmental quality management can also benefit from developments in the total quality management area. A great deal of attention is focused on how this could be achieved by adopting tools from total quality management, establishing environmental quality award programs and conducting environmental quality assessment. The book concludes by focusing on the needs to conserve the earth's limited natural resources and discussing some of the major environmental laws in the United States designed to protect the environment.

Competing on Quality and Environment Christian Ndubisi Madu, 2003. This work integrates two important issues that are shaping the future of businesses: total quality management (TQM) and environmental management. It presents the practice of quality and sustainable environmental management from a competitive posture. It develops a position to suggest that business firms can achieve competitiveness by developing strategies that focus on quality and environmental management practices. It demonstrates that quality and environmental management are not distinct topics but are interrelated and adopting strategies to concurrently achieve them may lead to higher customer satisfaction areas. In the TQM field, topics covered include the evolution of TQM management philosophies, quality function deployment, strategic quality planning and statistical quality control. In the environmental management field, topics covered include environmentally conscious manufacturing, sustainable strategies that include recycling, inverse manufacturing, remanufacturing, lean and agile manufacturing and life cycle assessment. The book also discusses the role of new technologies such as the Internet in achieving both high quality and sustainable practices. An integrative chapter is presented to tie both quality and environmental management practices together in achieving business competitiveness. Study of quality management and sustainable practices. Its content has implications for organizational competitiveness. ERP and Supply Chain Management Christian Ndubisi Madu, Chu-hua Kuei, 2005-06-10 Businesses today are faced with avalanche of information There is need to effectively manage information to serve customers better In today's highly competitive environment businesses need to be able to organize and coordinate their information so that a single view of information is maintained by all the service channels Information management can help to understand customers wants and needs and integrate such in product design It helps to manage inventory and reduces both cost and the cycle time to introduce new products to the marketplace Time to market is a critical issue in achieving competitiveness and without the availability of timely and accurate information it will not be possible to respond proactively to the changing market environment This book is about ERP and Supply Chain Management ERP is the short form for Enterprise Resource Planning The aim of ERP is to integrate the functions of the different business units and departments such as finance operations accounting and human resources This integration is necessary to organize and coordinate information that may be scattered in different departments and making them available in an organized format to the different decision centers where they may be needed Through this integrative approach the different functional units of the business are able to share a common database exchange information and have consistent view of their operations This consistent view is also presented to the customer thus improving the quality of customer service With the integration of the information system the different functional departments work together to achieve common organizational goals and objectives Without such integration common customer services such as order processing would be difficult to track and inconsistent information may be relayed by the different departments to the customer Supply chain management is an integral aspect of ERP Businesses today focus on their core competence It is no longer technically and economically feasible to focus on all activities Rather certain activities may be shifted to partners or vendors that have core competence in such areas Mercedes Benz may find it better to subcontract its radios to Bose while focusing on its car designing Yet these two companies may need to share key information on customers wants and needs as well as information on product designs Integrating a supplier into the common database helps in providing quality products and services that will satisfy the needs of the customer Information technology plays a

critical role in effective development of ERP system As many businesses develop online marketplace it becomes even more important to develop a single view of transactions to all value chain partners including customers manufacturer suppliers and other vendors This book therefore adopts a focus on ERP and Supply Chain Management to develop better plans to better serve the customer It adopts a management and a systemic perspective of these issues and does not deal with the software aspects of ERP The focus is on the fundamentals rather than on the advanced issues The book is intended to help managers executives and students to understand the basic concepts of ERP and Supply Chain Management

The House of Quality in a Minute Christian N. Madu, 2019-12-01 Quality function deployment QFD is an effective tool to help organizations to become more competitive by designing their products and services to satisfy customers requirements This book is precise and direct and focuses on the key issues in building the House of Quality otherwise known as Quality Function Deployment QFD By reading this book the manager understands how to solicit customer requirement information how design requirements are matched to customer requirements how priorities of customer needs are established and how activities are benchmarked Furthermore this new edition expands the topic to include process change initiatives on the premise that QFD cannot be achieved if the organization itself is not transformed to achieve customer satisfaction The manager is guided on how to solve critical problems to achieve customer satisfaction The book guides the reader to understand how companywide quality activities are related to QFD This association is often lacking in other presentations that treat QFD as if it is independent of other quality efforts such as process change initiative The book will therefore include information on related quality initiatives such as Identification of customer needs Benchmarking re engineering Strategic planning Quality assurance Stakeholder teams Cost control productivity improvement Six sigma
