Principles Of Process Research And Chemical Development In The Pharmaceutical Industry:

Principles of Process Research and Chemical Development in the Pharmaceutical Industry Oljan Repic, 1998 Dr Oljan Repic clearly explains the goals and basic principles of chemical development. He explores the crucial aspects of a new process that must be considered when scaling up a research synthesis to industrial levels. And with the help of many case studies and vignettes he delineates each phase of the development process. Key topics include qualities of an ideal process, techniques for minimizing impurities, criteria for cost effective synthesis of enantiopure compounds by resolutions, asymmetric synthesis and the chiral pool strategy, synthesis for labeling substances with hydrogen or carbon isotopes and new drug registration requirements. This book is an invaluable reference for professionals as well as an important source of guidance and inspiration for young chemists considering entering the field. *Process Chemistry in the Pharmaceutical Industry* Kumar Gadamasetti, 1999-05-06 Providing guidance for chemists and other scientists entering pharmaceutical discovery and development, this up to the minute reference presents contributions from an international group of nearly 50 renowned researchers offering a solid grounding in synthetic and physical organic chemistry and clarifying the roles of various special. Practical Process Research and Development Neal G. Anderson, 2012-05-23 Designed to provide a comprehensive step by step approach to organic process research and development in the pharmaceutical, fine chemical and agricultural chemical industries, this book describes the steps taken following synthesis and evaluation to bring key compounds to market in a cost effective manner. It describes hands on step by step approaches to solving process development problems including route, reagent and solvent selection, optimising catalytic reactions, chiral syntheses and green chemistry. Second Edition highlights. Reflects the current thinking in chemical process R D for small molecules. Retains similar structure and orientation to the first edition. Contains approx 85% new material. Primarily new examples, work up and prospective considerations for pilot plant and manufacturing scale up. Some new expanded topics e.g. green chemistry, genotoxins, enzymatic processes. Replaces the first edition although the first edition contains useful older examples that readers may refer to. Provides insights into generating rugged, practical, cost effective processes for the chemical preparation of small molecules. Breaks down process optimization into route, reagent and solvent selection, development of reaction conditions, workup, crystallizations and more. Presents guidelines for implementing and troubleshooting processes.

Active Pharmaceutical Ingredients Stanley Nusim, 2016-04-19 To successfully bring an Active Pharmaceutical Ingredient (API) to market, many steps must be followed to ensure compliance with governmental regulations. This book is an unparalleled guide to the development, manufacturing and regulation of the preparation and use of APIs globally. This second edition brings readers up to date with the quality control regulations for APIs that have been added or amended since the first edition. These updates help ensure that pharmaceutical professionals and drug manufacturers meet the established and required guidelines set forth by the US and international regulatory industries. Handbook of Green Chemistry and Technology James H. Clark,Duncan J. Macquarrie,2008-04-15 Sustainable development is now accepted as a necessary goal for achieving societal economic and environmental objectives Within this chemistry has a vital role to play The chemical industry is successful but traditionally success has come at a heavy cost to the environment The challenge for chemists and others is to develop new products processes and services that achieve societal economic and environmental benefits This requires an approach that reduces the materials and energy intensity of chemical processes and products minimises the dispersion of harmful chemicals in the environment maximises the use of renewable resources and extends the durability and recyclability of products in a way that increases industrial competitiveness as well as improve its tarnished image
