Principles of Plant Breeding Robert W. Allard, 1999-05-10 As ancient as agriculture itself plant breeding is one of civilization's oldest activities Today world food production is more dependent than ever on the successful cultivation of only a handful of major crops while continuing advances in agriculture rely on successfully breeding new varieties that are well adapted to their human influenced ecological circumstances Plant breeding involves elements of both natural and cultural selection a process which operates on individual plants and on plant populations This book offers the most recent detailed knowledge of plant reproduction and their environmental interaction which can help guide new breeding programs and help insure continuing progress in providing more food for growing populations produced with better care of the environment

Romagosa,2012-12-06 Our requirement for plant breeders to be successful has never been greater However one views the forecasted numbers for future population growth we will need in the immediate future to be feeding clothing and housing many more people than we do inadequately at present Plant breeding represents the most valuable strategy in increasing our productivity in a way that is sustainable and environmentally sensitive Plant breeding can rightly be considered as one of the oldest multidisciplinary subjects that is known to humans It was practised by people who first started to carry out a settled form of agriculture The art as it must have been at that stage was applied without any formal underlying framework but achieved dramatic results as witnessed by the forms of cultivated plants we have today We are now learning how to apply successfully the results of yet imperfect scientific knowledge This knowledge is however rapidly developing particularly in areas of tissue culture biotechnology and molecular biology Plant breeding s inherent multifaceted nature means that alongside obvious subject areas like genetics we also need to consider areas such as statistics physiology plant pathology entomology biochemistry weed science quality seed characteristics repro ductive biology trial design selection and computing It therefore seems apparent that modern plant breeders need to have a grasp of wide range of scientific knowledge and expertise if they are successfully to a exploit the techniques protocols and strategies which are open to them
