Rivers And Lakes Science Earth:

Rivers & Lakes Chris Oxlade, 2002 Part of a series exploring the astounding habitats of the world around us this is a study of rivers lakes It presents scientific and geographical information in an easy to read style focusing on green issues and how mankind has affected the environment It should be particularly useful for pupils studying areas of the curriculum involving geography and ecological topics Colourful diagrams and photographs are included **Lakes, Rivers, and Streams** Mina Flores, 2016-12-15 Water covers about 70 percent of Earth's surface Most water is located in Earth's oceans but Earth's freshwater is found in the lakes rivers and streams located around the globe This title encourages readers to dive deep into Earth's freshwater bodies Readers learn about important science concepts such as the water cycle and how bodies of water form Age appropriate text makes complex earth science concepts accessible for young readers Readers will be delighted by the photographs that accompany this well researched text Satellite Altimetry for Earth Sciences Frédéric Frappart, Ole Andersen, Sergey Lebedev, Guillaume Ramillien, 2019-04-09 Satellite altimetry is a radar technique for measuring the

topography of the Earth's surface It was initially designed for measuring the ocean's topography with reference to an ellipsoid and for the determination of the marine geoid Satellite altimetry has provided extremely valuable information on ocean science e.g. circulation surface geostrophic currents eddy structures wave heights and the propagation of oceanic Kelvin and Rossby waves With more than 25 years of observations it is also becoming vital to climate research providing accurate measurements of sea level variations from regional to global scales Altimetry has also demonstrated a strong potential for geophysical cryospheric and hydrological research and is now commonly used for the monitoring of Arctic and Antarctic ice sheet topography and of terrestrial surface water levels This book aims to present reviews and recent advances of general interest in the use of radar altimetry in Earth sciences Manuscripts are related to any aspect of radar altimetry technique or geophysical applications We also encourage manuscripts resulting from the application of new altimetric technology SAR SARin and Ka band and improvements expected from missions to be launched in the near future i.e. SWOT

Earth Science and Applications from Space National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Earth Science and Applications from Space: A Community Assessment and Strategy for the Future, 2007-10-01 Natural and human induced changes in Earth's interior land surface biosphere atmosphere and oceans affect all aspects of life Understanding these changes requires a range of observations acquired from land sea air and space based platforms To assist NASA NOAA and USGS in developing these tools the NRC was asked to carry out a decadal strategy survey of Earth science and applications from space that would develop the key scientific questions on which to focus Earth and environmental observations in the period 2005 2015 and beyond and present a prioritized list of space programs missions and supporting activities to address these questions This report presents a vision for the Earth science program an analysis of the existing Earth Observing System and recommendations to help restore its

capabilities an assessment of and recommendations for new observations and missions for the next decade an examination of and recommendations for effective application of those observations and an analysis of how best to sustain that observation and applications system

Directions T. Narock,P. Fox,2015-07-14 The geosciences are one of the fields leading the way in advancing semantic technologies This book continues the dialogue and feedback between the geoscience and semantic web communities Increasing data volumes within the geosciences makes it no longer practical to copy data and perform local analysis Hypotheses are now being tested through online tools that combine and mine pools of data This evolution in the way research is conducted is commonly referred to as e Science As e Science has flourished the barriers to free and open access

to data have been lowered and the need for semantics has been heightened. As the volume, complexity and heterogeneity of data resources grow, geoscientists are creating new capabilities that rely on semantic approaches. Geoscience researchers are actively working toward a research environment of software tools and interfaces to data archives and services with the goals of full scale semantic integration beginning to take shape. The members of this emerging semantic e Science community are increasingly in need of semantic based methodologies, tools and infrastructure. A feedback system between the geo and computational sciences is forming. Advances in knowledge modeling, logic based hypothesis checking, semantic data integration and knowledge discovery are leading to advances in scientific domains which in turn are validating semantic approaches and pointing to new research directions. We present mature semantic applications within the geosciences and stimulate discussion on emerging challenges and new research directions.

Vision and Voyages for Planetary Science in the Decade 2013-2022 National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Planetary Science Decadal Survey, 2012-01-30

In recent years planetary science has seen a tremendous growth in new knowledge. Deposits of water ice exist at the Moon's poles. Discoveries on the surface of Mars point to an early warm wet climate and perhaps conditions under which life could have emerged. Liquid methane rain falls on Saturn's moon Titan creating rivers, lakes and geologic landscapes with uncanny resemblances to Earth's. *Vision and Voyages for Planetary Science in the Decade 2013-2022* surveys the current state of knowledge of the solar system and recommends a suite of planetary science flagship missions for the decade 2013-2022 that could provide a steady stream of important new discoveries about the solar system. Research priorities defined in the report were selected through a rigorous review that included input from five expert panels. NASA's highest priority large mission should be the Mars Astrobiology Explorer-Cacher (MAX-C), a mission to Mars that could help determine whether the planet ever supported life and could also help answer questions about its geologic and climatic history. Other projects should include a mission to Jupiter's icy moon Europa and its subsurface ocean and the Uranus Orbiter and Probe mission to investigate that planet's interior structure, atmosphere and composition. For medium size missions *Vision and Voyages for Planetary Science in the Decade 2013-2022* recommends that NASA select two new missions to be included in its New Frontiers program which explores the solar system with frequent mid size spacecraft missions. If NASA cannot stay within budget for any of these proposed flagship projects it should focus on smaller, less expensive missions. First *Vision and Voyages for Planetary Science in the Decade 2013-2022* suggests that the National Science Foundation expand its funding for existing laboratories and establish new facilities as needed. It also recommends that the program enlist the participation of international partners. This report is a vital resource for government agencies supporting space science, the planetary science community and the public.
