## Sciences The Humanities:

**Computing in the Social Sciences and Humanities** Orville Vernon Burton, 2002 CD ROM contains Multimedia that provides unique approach to various disciplines in the social sciences and humanities Links to related resources *What Science Offers the Humanities* Edward Slingerland, 2008-02-11 What Science Offers the Humanities examines some of the deep problems facing the study of culture It focuses on the excesses of postmodernism but also acknowledges serious problems with postmodernism's harshest critics In short Edward Slingerland argues that in order for the humanities to progress its scholars need to take seriously contributions from the natural sciences and particular research on human cognition which demonstrate that any separation of the mind and the body is entirely untenable The author provides suggestions for how humanists might begin to utilize these scientific discoveries without conceding that science has the last word on morality religion art and literature Calling into question such deeply entrenched dogmas as the blank slate theory of nature strong social constructivism and the ideal of disembodied reason What Science Offers the Humanities replaces the human sciences divide with a more integrated approach to the study of culture **Overcoming the Two Cultures** Richard E Lee Jr, Immanuel Wallerstein, 2015-12-03 This book tells the story of how the very idea of two cultures the so called divorce between science and the humanities was a creation of the modern world system The contributors working from a common research framework trace the divorce of facts and values as part of the transition from feudalism to capitalism This led to a polarization between universalist science and the particularist humanities and finally to the creation of the social sciences as an uneasy intermediary in this epistemological debate The book addresses the contemporary attempts to overcome the division between the two cultures that emerge from science feminism race and ethnic studies cultural studies and ecology ending with an analysis of the culture wars and the science wars Contributors Volkan Aydar Ay se Betul Celik Mauro Di Meglio Mark Frezzo Ho fung Hung Biray Kolloup glu K3 4rl3 4 Agustin Lao Montes Eric Mielants Boris Stremlin Sunaryo Norihisa Yamashita Deniz Yukeseker *Creating Consilience* Edward Slingerland, Mark Collard, 2012-01-19 Calls for a consilient or vertically integrated approach to the study of human mind and culture have for the most part been received by scholars in the humanities with either indifference or hostility One reason for this is that consilience has often been framed as bringing the study of humanistic issues into line with the study of non human phenomena rather than as something to which humanists and scientists contribute equally The other major reason that consilience has yet to catch on in the humanities is a dearth of compelling examples of the benefits of adopting a consilient approach Creating Consilience is the product of a workshop that brought together internationally renowned scholars from a variety of fields to address both of these issues It includes representative pieces from workshop speakers and participants that examine how adopting such a consilient stance informed by cognitive science and grounded in evolutionary theory would concretely impact specific topics in the humanities examining each topic in a manner that not only cuts across the humanities natural science divide but also

across individual humanistic disciplines By taking seriously the fact that science humanities integration is a two way exchange this volume takes a new approach to bridging the cultures of science and the humanities The editors and contributors formulate how to develop a new shared framework of consilience beyond mere interdisciplinarity in a way that both sides can accept **The Logic of the Sciences and the Humanities** Filmer Stuart Cuckow Northrop,1983

Content Analysis for the Social Sciences and Humanities Ole R. Holsti,1969 Textbook on content analysis research method in social research with particular reference to the mass media process includes a literature survey of relevant aspects of social psychology and covers creative thinking in research planning cultural factors and sociological aspects of analysis the use of statistical methods the role of EDP systems and computers in content analysis in the social sciences and humanities etc Bibliography pp 195 to 221 *Human Sciences* Jens Hoyrup,2000-06-08 Human Sciences assesses the importance and value of the humanities historically and philosophically and makes the case for treating them as sciences Through careful examination of the characteristics they share with the natural and social sciences as well as what distinguishes them from other scientific fields the book argues that the humanities may be seen to correspond with the German Latin Wissenschaft scientia that is as systematic organized bodies of knowledge rather than as branches of knowledge that should necessarily emulate the quantitative and experimental approach of the natural sciences After analyzing the humanities from historical and philosophical perspectives the book presents a general philosophy of science that results from an analysis of the features that are shared by the humanities and the natural and social sciences and then applies some of these insights to philosophical problems of particular relevance for the humanities such as moral philosophy and the relation between art and cognition *Both Human and Humane* University of Pennsylvania. Graduate School of Arts and Sciences,1960 **The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education** National Academies of Sciences, Engineering, and Medicine,Policy and Global Affairs,Board on Higher Education and Workforce,Committee on Integrating Higher Education in the Arts, Humanities, Sciences, Engineering, and Medicine,2018-06-21 In the United States broad study in an array of different disciplines arts humanities science mathematics engineering as well as an in depth study within a special area of interest have been defining characteristics of a higher education But over time in depth study in a major discipline has come to dominate the curricula at many institutions This evolution of the curriculum has been driven in part by increasing specialization in the academic disciplines There is little doubt that disciplinary specialization has helped produce many of the achievement of the past century Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise grappling with ever more specialized and fundamental problems Yet today many leaders scholars parents and students are asking whether higher education has moved too far from its integrative tradition towards an approach heavily rooted in disciplinary silos These silos represent what many see as an artificial separation of academic disciplines This study reflects a growing concern that the approach to

higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time

*The Integration of the Humanities and Arts with Sciences Engineering and Medicine in Higher Education* examines the evidence behind the assertion that educational programs that mutually integrate learning experiences in the humanities and arts with science technology engineering mathematics and medicine STEM lead to improved educational and career outcomes for undergraduate and graduate students It explores evidence regarding the value of integrating more STEM curricula and labs into the academic programs of students majoring in the humanities and arts and evidence regarding the value of integrating curricula and experiences in the arts and humanities into college and university STEM education programs

*New Thinking in Complexity for the Social Sciences and Humanities* Ton Jörg, 2014-10-18 The underlying idea and motive for the book is that the notion of complexity may humanize the social sciences may conceive the complex human being as more human and turn reality as assumed in our doing social science into a more complex that is a richer reality for all The main focus of this book is on new thinking in complexity with complexity to be taken as derived from the Latin word *complexus* that which is interwoven The trans disciplinary approach advocated here will be trans disciplinary in two ways firstly by going beyond the separate disciplines within the fields of both natural sciences and social sciences and secondly by going beyond the separate cultures of the natural sciences and of the social sciences and humanities

**Scholarly Virtues in Nineteenth-Century Sciences and Humanities** Christiaan Engberts, 2022-11-27 Reflecting a growing interest in the history of knowledge this book explores the importance of scholarly virtues during the late nineteenth century The practice of science is moulded on notions of scholarly values such as diligence impartiality meticulousness and patience but here the author focuses on the virtues of collegial loyalty and critical independence By analysing how virtues were reflected in day to day scholarly work and examining the possibility that these virtues may have come into conflict with each other this book sheds light on what is often described as the moral economy of scholarship a metaphor which draws attention to the changeability of the expectations raised by virtue Highlighting the pre eminence and exemplary nature of German scholarship during the nineteenth century the author provides a detailed analysis of four evaluative practices used by scholars across the humanities social sciences and natural sciences in a number of German universities This allows a nuanced understanding of the complex relationship between collegial loyalty and critical independence in the academic working environment and draws comparisons across varying disciplines A welcome contribution to a growing field of research this book provides a comparative and transdisciplinary overview of scholarly virtues and will be of interest to those researching the history of science and the humanities

*Epistemic Virtues in the Sciences and the Humanities* Jeroen van Dongen, Herman Paul, 2017-12-21 This book explores how physicists astronomers chemists and historians in the late nineteenth and early twentieth centuries employed epistemic virtues such as accuracy objectivity and intellectual courage In doing so it takes the first step in providing an integrated history of the sciences and humanities It assists in addressing such

questions as What kind of perspective would enable us to compare organic chemists in their labs with paleographers in the Vatican Archives or anthropologists on a field trip with mathematicians poring over their formulas While the concept of epistemic virtues has previously been discussed primarily in the contexts of the history and philosophy of science this volume is the first to enlist the concept in bridging the gap between the histories of the sciences and the humanities Chapters research whether epistemic virtues can serve as a tool to transcend the institutional disciplinary boundaries and thus help to attain a post disciplinary historiography of modern knowledge Readers will gain a contextualization of epistemic virtues in time and space as the book shows that scholars themselves often spoke in terms of virtue and vice about their tasks and accomplishments This collection of essays opens up new perspectives on questions discourses and practices shared across the disciplines even at a time when the neo Kantian distinction between sciences and humanities enjoyed its greatest authority Scholars including historians of science and of the humanities intellectual historians virtue epistemologists and philosophers of science will all find this book of particular interest and value

**The logic of the sciences and the humanities** Filmer S. C. Northrop,1953      **Latour and the Humanities** Rita Felski,Stephen Muecke,2020-09-01 How does the work of influential theorist Bruno Latour offer a fresh angle on the practices and purposes of the humanities In recent years defenses of the humanities have tended to argue along predictable lines the humanities foster empathy the humanities encourage critical thinking the humanities offer a counterweight to the cold calculations of the natural and social sciences The essays in Latour and the Humanities take a different approach Exploring the relevance of theorist Bruno Latour s work they argue for attachments and entanglements between the humanities and the sciences while looking closely at the interests institutions and intellectual projects that shape the humanities within and beyond the university The collection which is written by a group of highly distinguished scholars from around the world is divided into two sections In the first part authors engage in depth with Latour s work while also rethinking the ties between the humanities and the sciences Essays argue for greater attention to the nonhuman world the urgency of climate change and more nuanced views of universities as institutions The second half of the volume contains essays that reflect on Latour s influence on the practices of specific disciplines including art the digital humanities film studies and political theory Inspiring conversation about the relevance of actor network theory for research and teaching in the humanities Latour and the Humanities offers a substantial introduction to Latour s work while discussing the humanities without falling back on the genres of either the sermon or the jeremiad This volume will be of interest to all those searching for fresh perspectives on the value and importance of humanistic disciplines and thought Contributors David J Alworth Anders Blok Claudia Breger Dipesh Chakrabarty Yves Citton Steven Connor Gerard de Vries Simon During Rita Felski Francis Halsall Graham Harman Antoine Hennion Casper Bruun Jensen Bruno Latour Heather Love Patrice Maniglier Stephen Muecke Barbara Herrnstein Smith Nigel Thrift Michael Witmore      Circular United States. Lindholm-Romantschuk,1998-01-26 This study explores the flow of information within and among academic disciplines in the social sciences and humanities through analyses of the patterns of scholarly book reviewing An elite sample of scholarly monographs published by university presses between 1971 and 1990 was used Beginning with Derek de Solla Price the measurement of communication within the disciplines of science has been ongoing In the present book that field of inquiry is summarized and provides a basis for examining the flow of information in the social sciences and humanities

**Overcoming the Two Cultures** Richard E. Lee,Immanuel Maurice Wallerstein,Volkan Aytar,2004 Explores the split between science and the humanities what caused it and the cultures that have grown out of it *New Thinking in Complexity for the Social Sciences and Humanities* Ton Jörg,2010 Annotation This text takes the complexity of our real world complexity not for granted but as a serious topic for our social sciences and humanities It is about the possibility of learning a new way of thinking about the real complexity of our world and opening up a new way of viewing and doing science

**The Subject Bibliography of the Social Sciences and Humanities** Barbara M. Hale,2014-05-17 International Series of Monographs in Library and Information Science Volume 12 The Subject Bibliography of the Social Sciences and Humanities focuses on subject bibliographies of the humanities and social sciences The manuscript first outlines the development of subject bibliography in the 16th up to 20th centuries including developments in subject bibliography of social sciences and humanities and theory of bibliography The book then discusses subject bibliography and flow of information Topics include information storage and retrieval scholarly communications and other library tools The text surveys the alphabetical and chronological arrangements of subject bibliographies including the arrangement of selected bibliographies Current and retrospective unannotated bibliographies and indexes current and retrospective bibliographical reviews and grading and abstracts are underscored The book is a vital reference for readers wanting to explore humanities and social sciences **The Science and the Humanities** ,19??
