concerns himself only with the tool on the end of the robot arm He can think of the tool's frame of reference and computer subroutines automatically make the various articulations move so as to accomplish the desired tool manipulation As is often the case with statements of this kind they are appealing and generally well founded in technological feasibility But in order to turn the prediction into reality it requires the dedication and inventiveness of an international community of researchers The object of this book is to provide a window on to some of the advances made by this community which go towards the fulfilment of Engelberger's predictions A significant factor in the framework within which this work is being pursued is the phenomenal advance in the availability of inexpensive and highly compact computing power It becomes increasingly possible to imagine powerful microprocessors providing local intelligence at key points in a robot arm Joints gripper etc by being connected through a communications network and controlled by some specially designated supervisory microchip
