Scientific And Religious Belief:

The Big Questions in Science and Religion Keith Ward, 2008-05 Can religious beliefs survive in the scientific age Are they resoundingly outdated Or is there something in them of great importance even if the way they are expressed will have to change given new scientific context These questions are among those at the core of the science religion dialogue An Anglican priest who was once an atheist offers compelling insights into the often contentious relationship between diverse religious views and new scientific knowledge He identifies ten basic questions about the nature of the universe and human life Among these are Does the universe have a goal or purpose Do the laws of nature exclude miracles Can science provide a wholly naturalistic explanation for moral and religious beliefs Has science made belief in God obsolete Are there any good science based arguments for God Ward considers concepts from Buddhism Confucianism Taoism Islam Hinduism Judaism and Christianity while featuring the speculations of cosmologists physicians mathematicians and philosophers Scientific Explanation and Religious Belief Michael G. Parker, Thomas M. Schmidt, 2005 Contributions from an international conference held December 11 13 2002 at the Institute for Philosophy of Religion at the Johann Wolfgang Goethe University in Frankfurt

Facets of Faith and Science Jitse M. van der Meer, 1996 This first volume explores the specific roles of metaphysical and religious beliefs in explanation and theory construction in the natural sciences It surveys modes of interaction between religion and science paying attention to the sensitivities required for their historiography **Science, Religion and Deep Time** Lowell Gustafson, Barry Rodrigue, David Blanks, 2022-07-05 This book examines the meaning of religion within the scientific evidence based history of our known past since the big bang While our current major religions are only centuries or millennia old our volume discusses the origins and development of human religious practice and belief over our species existence of 300 000 years The volume also connects the scientific approach to natural and social history with ancient truths of our religious ancestors using new lines of inquiry new technologies new modes of expression and new concepts It brings together insights of natural scientists social scientists philosophers writers and theologians to discuss narratives of the universe The essays discuss that to apprehend religion scientifically or to interpret and explain science theologically the subject must be examined through a variety of disciplinary lenses simultaneously and raise several theoretical philosophical and moral problems With a singular investigation into the meaning of religion in the context of the 13.8 billion year history of our universe this book will be indispensable for scholars and students of religious studies big history sociology and social anthropology philosophy and science and technology studies *A New Science of Religion* Greg Dawes, James Maclaurin, 2012-12-12 Religious belief once in the domain of the humanities has found a new home in the sciences Promising new developments in the study of religion by cognitive scientists and evolutionary theorists put forward empirical hypotheses regarding the origin spread and character of religious beliefs Different theories deal with different aspects of human religiosity some focus on religious beliefs while others focus on religious actions and still others on the origin of religious

ideas While these theories might share a similar focus there is plenty of disagreement in the explanations they offer This volume examines the diversity of new scientific theories of religion by outlining the logical and causal relationships between these enterprises Are they truly in competition as their proponents sometimes suggest or are they complementary and mutually illuminating accounts of religious belief and practice Cognitive science has gained much from an interdisciplinary focus on mental function and this volume explores the benefits that can be gained from a similar approach to the scientific study of religion

Exploring Science and Belief Michael Poole, 2007-10 Some scientists have religious beliefs we must ourselves be prepared and willing to make a reasoned presentation of our faith especially to young scientists who have all too often concluded that a serious faith in a personal God and objective pursuit of scientific truth are incompatible Professor Francis Collins Director National Human Genome Research Institute some do not the beliefs of most popular religions by scientific standards are based on evidence so flimsy that only an act of blind faith can make them acceptable Dr Francis Crick co discoverer of DNA's structure However science and belief are both very important for us Do we have to choose between them The view that science and belief are in conflict is a major stumbling block for many people today Michael Poole addresses this issue in Exploring Science and Belief Is science the ultimate test of what to believe Do its laws make belief in miracles impossible Has Darwin's work ruled out the idea of a creating God How did the universe develop Was it accidental or planned What will happen to it eventually Do we have any significance in it These are some of the questions addressed in Exploring Science and Belief Although he starts from what is for the theist the conviction for the agnostic the hypothesis and for the atheist the delusion that God exists Michael Poole also discusses evidence for God's existence

Faith Versus Fact Jerry A. Coyne, 2016-05-17 A superbly argued book Richard Dawkins author of The God Delusion The New York Times bestselling author of Why Evolution is True explains why any attempt to make religion compatible with science is doomed to fail In this provocative book evolutionary biologist Jerry A Coyne lays out in clear dispassionate detail why the toolkit of science based on reason and empirical study is reliable while that of religion including faith dogma and revelation leads to incorrect untestable or conflicting conclusions Coyne is responding to a national climate in which more than half of Americans don't believe in evolution members of Congress deny global warming and long conquered childhood diseases are reappearing because of religious objections to inoculation and he warns that religious prejudices in politics education medicine and social policy are on the rise Extending the bestselling works of Richard Dawkins Daniel Dennett and Christopher Hitchens he demolishes the claims of religion to provide verifiable

truth by subjecting those claims to the same tests we use to establish truth in science Coyne irrefutably demonstrates the grave harm to individuals and to our planet in mistaking faith for fact in making the most important decisions about the world we live in Praise for Faith Versus Fact A profound and lovely book showing that the honest doubts of science are better than the false certainties of religion Sam Harris author of The End of Faith **Religious Belief and Science** Glenn H. Utter,2024-12-12 This resource helps readers navigate and better understand the religious cultural and political impact of American views of religious faith and scientific inquiry Do different religious faiths and traditions hold varying views on Charles Darwin s theory of evolution How does religious belief shape American attitudes about vaccination and climate change How have American political affiliations been influenced by these controversies and debates This all in one resource provides answers to all these questions and more Coverage includes narrative chapters detailing how religious belief and science have intersected in the lives of Americans historically as well as how they shape our lives today Other features include scholarly essays discussing how people of different religious beliefs as well as people who are non religious view science and its role in American society biographical profiles of activists and opinion shapers tables and figures primary documents annotated bibliography and chronology of events Encyclopedia of Science and Religion ,2007 Publisher description How do the latest medical developments affect our beliefs in faith s healing power Can artificial intelligence compare with human consciousness Are genetic engineers interfering with Nature s work This reference work deals with these questions and others examining the issues and the history associated with the complex relationship between science and religion Articles by scientists of many fields philosophers and thinkers from all the major world religions present a variety of perspectives on the major scientific discoveries of our time and their effects on our religious belief system

Religion and the Challenges of Science Mr Richard Feist,Professor William Sweet,2013-05-28 Does science pose a challenge to religion and religious belief This question has been a matter of long standing debate and it continues to concern not only scholars in philosophy theology and the sciences but also those involved in public educational policy This volume provides background to the current science and religion debate yet focuses as well on themes where recent discussion of the relation between science and religion has been particularly concentrated The first theme deals with the history of the interrelation of science and religion The second and third themes deal with the implications of recent work in cosmology biology and so called intelligent design for religion and religious belief The fourth theme is concerned with conceptual issues underlying or implied in the current debates such as Are scientific naturalism and religion compatible Are science and religion bodies of knowledge or practices or both Do religion and science offer conflicting truth claims By illuminating contemporary discussion in the science religion debate and by outlining the options available in describing the relation between the two this volume will be of interest to scholars and to members of the educated public alike *Scientific and Religious Belief* Paul Weingartner,Elena Klevakina-Uljanov,Gerhard Schurz,1994 Providing insights into the interrelation

between scientific and religious belief this work covers features of belief in general and discusses distinctive properties between belief knowledge and acceptance These properties are considered in relation and comparison to religious belief

Scientism Mikael Stenmark, 2017-03-02 Can science tell us everything there is to know about reality The intellectual and practical successes of science have led some scientists to think that there are no real limits to the competence of science and no limits to what can be achieved in the name of science Accordingly science has no boundaries it will eventually answer all our problems This view and similar views have been called Scientism In this important book scientists views about science and its relationship to knowledge ethics and religion are subjected to critical scrutiny A number of distinguished natural scientists have advocated Scientism in one form or another Francis Crick Richard Dawkins Carl Sagan and Edward O Wilson and their impressive impact both inside and outside the sciences is considered Clarifying what Scientism is this book proceeds to evaluate its key claims expounded in questions such as Is it the case that science can tell us everything there is to know about reality Can science tell us how we morally ought to live and what the meaning of life is Can science in fact be our new religion Ought we to become science believers Stenmark addresses these and similar issues concluding that Scientism is not really science but disguised materialism or naturalism its advocates fail to see this not being sufficiently aware that their arguments presuppose the previous acceptance of certain extra scientific or philosophical beliefs
