Documents and Their Scientific Examination Charles Ainsworth Mitchell, 1922 From the PREFACE THE scientific examination of documents as a branch of forensic chemistry has been strangely neglected and hitherto there has been no work dealing fully with the subject from all points of view The present book is based upon personal experience extending over many years and includes the results of a great variety of investigations on such subjects as the composition and behavior of inks pencil pigments sealing wax and other writing materials in connection with their use upon documents Some of these

results have been communicated to scientific societies and subsequently published in their journals and so have had the advantage of being discussed and criticized by experts in the respective subjects The questions of the materials upon which the writing typing or printing appears of handwriting of finger prints photography and microscopical examination are all inseparably connected with the scientific examination of documents and these I have dealt with in due proportion to the whole subject bearing in mind works already available For the purpose of presenting expert evidence in legal cases criminal charges the investigation of anonymous letters and the like such studies are of material importance and as little information on the chemical questions involved was available I had to make prolonged laboratory experiments to obtain trustworthy results and these records should prove of service to others In connection with the chemical examination of documents I am privileged to make use of numerous details of cases and observations recorded by Mr A Lucas Director of the Government Laboratory Cairo whose excellent work on Forensic Chemistry contains short sections on the subject My best thanks are also due to Mr A E Osborn of New York for valuable information kindly sent to me and for several illustrations as well as for permission to quote from his standard work **Questioned Documents Suspect Documents, Their Scientific Examination** Wilson R. Harrison,1958 **Review of The Scientific Examination of Documents, Methods and Techniques, Second Edition** SC. McKasson,2000 In the preface to this edition the author points out that the object of the book is to provide an outline of the subject and that the intended audience is those interested individuals outside the field of document examination Most books on document examination contain some disclaimer of this sort that they are intended for lawyers or investigators who may have need for the services of a professional document examiner and have more than a passing interest of what expertise in the field is comprised In most texts this is a sort of cover story strategy designed to serve one or more of the following purposes to provide some protection to experienced document examiners maybe especially the authors themselves when a cross examining attorney tries to use the book as an authority in the field or learned treatise to prevent the naive from using the text as the sole training source or perhaps to extend the longevity of the work since an overview would not tend to go out of date quite as fast as a treatise Most authors then attempt to be a textbook reference for document examiners despite their claims to the contrary *Forensic Document Examination in the 21st Century* Miriam Angel,Jan Seaman Kelly,2020-12-21 Forensic Document Examination in the 21st Century covers the latest technology and techniques providing a complete resource on contemporary issues and methods in forensic document examination Forensic document examiners provide their findings as expert testimony in court Due to rapid changes in technology including digital documents printing and photocopying capabilities and more there is a great need for this up to date reference The examination of documents can include comparison of handwriting or hand printing detection of alterations or photocopier and computer manipulation restoration or decipherment of erased and obliterated writing visualization of latent impressions the identification of printing processes and differentiation of inks Computer generated

documents are prevalent and electronically captured signatures are becoming more widespread meaning the knowledge of advances in technology and adoption of new validated techniques and methods of document examination are crucial to the reliability of forensic opinions Forensic Document Examination in the 21st Century includes the latest research on the subject and with contributions from leading experts on their various areas of expertise The book will be a welcome addition to the literature and support the foundational basis for methods and procedures for use it expert testimony in court serving as a resource for forensic document examiners trainees and those in the criminal and legal communities who use the services of expert document examiners and witnesses *Encyclopedia of Forensic Science* Suzanne Bell, 2008 Presents an alphabetical encyclopedia of the forensic science principles used in investigating crime scenes and suspects

Questioned Documents

Albert Sherman Osborn, 1929 The purpose of this book is to assist in the discovery and proof of the facts in any investigation or legal inquiry involving the genuineness of a document Definite instructions are given regarding the investigation of the several classes of questioned documents Since the first edition of this book was issued eighteen years ago there has been a revolution in many American courts in the methods and procedure relating to the proof of the facts in disputed document cases It can hardly be believed now that less than fifteen years ago no standard of comparison no genuine writing whatever could be introduced either to prove genuineness or forgery in the United States federal courts or in the state courts of many states In the great majority of courts however there is now a helpful and receptive attitude that tends to make a trial at law involving a disputed document as it should be a legally supervised scientific investigation Courts are more and more distinguishing between mere opinions and clear demonstrative evidence between honest and competent witnesses and dishonest and incompetent fakirs and pretenders A hope is again expressed that this new and enlarged work will aid in promoting justice
