**Writing Science** Markus Asper,2013-06-26 Scientific and technological texts have not played a significant role in modern literary criticism This applies to Classics too despite the fact that a large part of the field s extant texts deal with questions of medicine mathematics and natural philosophy Focusing mostly on medical and mathematical texts this collection aims at approaching ancient Greek science and its texts from the cross disciplinary perspective of authorship Among the questions addressed are What is a scientific author In what respect does scientific writing differ from literary writing How does the author present himself as an authoritative figure through his text What strategies of trust do these authors employ These and related questions cannot be discussed within the typical boundaries of modern academic disciplines thus most of the sixteen authors many of them leading experts in the fields of ancient science bring a comparative perspective to their subjects As a result the collection not only offers a new approach to this vast area of ancient literature thus effectively discovering new possibilities for literary criticism it also reflects on our current forms of scientific and scholarly written communication      **A Companion to Science, Technology, and Medicine in Ancient Greece and Rome, 2 Volume Set**

*Ancient Greek and Roman Science* Liba Taub, 2023-04-25 Very Short Introductions Brilliant Sharp Inspiring Ancient Greece is often considered to be the birthplace of science and medicine and the explanation of natural phenomena without recourse to supernatural causes The early natural philosophers lovers of wisdom concerning nature sought to explain the order and composition of the world and how we come to know it They were particularly interested in what exists and how it is ordered ontology and cosmology They were also concerned with how we come to know epistemology and how best to live ethics At the same time the scientific thinkers of early Greece and Rome were also influenced by ideas from other parts of the world and incorporated aspects of Egyptian Babylonian and Indian science and mathematics in their studies In this Very Short Introduction Liba Taub gives an overview of the major developments in early science between the 8th century BCE and 6th century CE Focussing on Greece and Rome Taub challenges a number of modern misconceptions about science in the classical world which has often been viewed with a modern lens and by modern scientists such as the misconception that little empirical work was conducted or that the Romans did not do science unlike the Greeks Beginning with the scientific notions of Thales Pythagoras Parmenides and other Presocratics she moves on to Plato and Aristotle before considering Hellenistic science the influence of the Stoics and Epicurean ideas and the works of Pliny the Elder Eratosthenes and Ptolemy In her sweeping discussion Taub explores the richness and creativity of ideas concerning the natural world and the influence these ideas have had on later centuries
