Boyer,2012-06-28 This study presents the concepts and contributions from before the Alexandrian Age through to Fermat and Descartes and on through Newton and Euler to the Golden Age from 1789 to 1850 1956 edition Analytical bibliography Index **Literature in the First Media Age** David Trotter,2013-12-16 The period between the World Wars was one of the richest and most inventive in the long history of

British literature Interwar literature stood apart by virtue of the sheer intelligence of the enquiries it undertook into the technological mediation of experience After around 1925 literary works began to examine the sorts of behavior made possible for the first time by virtual interaction And they began to fill up too with the look sound smell taste and feel of the new synthetic and semi synthetic materials that were reshaping everyday modern life New media and new materials gave writers a fresh opportunity to reimagine both how lives might be lived and how literature might be written Today such material and immaterial mediations have become even more decisive Communications technology is an attitude before it is a machine or a set of codes It is an idea about the prosthetic enhancement of our capacity to communicate The writers who first woke up to this fact were not postwar postmodern or post anything else some of the best of them lived and wrote in the British Isles in the period between the World Wars **The Selected Works of Arne Naess** Arne Naess,2007-11-17 Arne Naess is considered one of the most important philosophers of the twentieth century He has been a tremendously prolific author yet his works as a whole have remained largely unavailable until now Springer made available for the first time a definitive 10 volume collection of Arne Naess s life s works The Selected Works of Arne Naess The Selected Works of Arne Naess SWAN presents a major overview of Arne Naess s thinking and provides an extensive collection of this prolific philosopher s principal writings Some of Naess s most important publications have never before been available in English Many others are out of print Often his papers were published in obscure and inaccessible journals And because Naess has been so prolific many of his most important papers still remain unpublished The publication of SWAN makes Naess s work more fully accessible to scholars students and critics alike *Writing the History of Mathematics: Its Historical Development* Joseph W. Dauben,Christoph J. Scriba,2002-09-23 As an historiographic monograph this book offers a detailed survey of the professional evolution and significance of an entire discipline devoted to the history of science It provides both an intellectual and a social history of the development of the subject from the first such effort written by the ancient Greek author Eudemus in the Fourth Century BC to the founding of the international journal Historia Mathematica by Kenneth O May in the early 1970s *Serial Holdings in the Pennsylvania State University Libraries* Pennsylvania State University. Libraries,1975 *Encyclopaedia of the History of Science, Technology, and Medicine in Non-Westen Cultures* Helaine Selin,1997-07-31 The Encyclopaedia fills a gap in both the history of science and in cultural stud ies Reference works on other cultures tend either to omit science completely or pay little attention to it and those on the history of science almost always start with the Greeks with perhaps a mention of the Islamic world as a trans lator of Greek scientific works The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures science Our aim is not to claim the superiority of other cultures but to engage in a mutual exchange of ideas The Western aca demic divisions of science technology and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected This work contributes to redressing the balance in the number of reference

works devoted to the study of Western science and encourages awareness of cultural diversity The Encyclopaedia is the first compilation of this sort and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today There is nothing that crosses disciplinary and geographic boundaries dealing with both scientific and philosophical issues to the extent that this work does xi PERSONAL NOTE FROM THE EDITOR Many years ago I taught African history at a secondary school in Central Africa **Research in History and Philosophy of Mathematics** Maria Zack,David Waszek,2024-12-04 This volume contains 8 papers that have been collected by the Canadian Society for History and Philosophy of Mathematics It showcases rigorously reviewed contemporary scholarship on an interesting variety of topics in the history and philosophy of mathematics Some of the topics explored include The work of Alfred Clebsch and Adolph Mayer on the theory of the second variation a topic in the calculus of variations The history of The Analyst the journal that would eventually become the Annals of Mathematics and its founding editor Joel Hendricks An examination of early attempts at introducing transformations into the geometry curriculum at the secondary level Anna Sfard s commognitive theory of learning and how it can be applied to gain insights into certain aspects of the history of mathematics Analyzing archaeological data from Rapa Nui Easter Island and the kinship system of the Natchez tribe of the Mississippi Valley as examples of utilizing ethnomathematics in mathematics education Written by leading scholars in the field these papers are accessible not only to mathematicians and students of the history and philosophy of mathematics but also to anyone with a general interest in mathematics Introduction to Mathematics Hollis Raymond Cooley,1949 *Mathematics of Computation 1943-1993: A Half-Century of Computational Mathematics* Walter Gautschi,1994 Proceedings of an International Conference held in Vancouver B C August 1993 to commemorate the 50th anniversary of the founding of the journal Mathematics of Computation It consisted of a Symposium on Numerical Analysis and a Minisymposium of Computational Number Theory This proceedings contains 14 invited papers including two not presented at the conference an historical essay on integer factorization and a paper on componentwise perturbation bounds in linear algebra The invited papers present surveys on the various subdisciplines covered by Mathematics of Computation in a historical perspective and in a language accessible to a wide audience The 46 contributed papers address contemporary specialized work Annotation copyright by Book News Inc Portland OR *Martin Davis on Computability, Computational Logic, and Mathematical Foundations* Eugenio G. Omodeo,Alberto Policriti,2017-01-27 This book presents a set of historical recollections on the work of Martin Davis and his role in advancing our understanding of the connections between logic computing and unsolvability The individual contributions touch on most of the core aspects of Davis work and set it in a contemporary context They analyse discuss and develop many of the ideas and concepts that Davis put forward including such issues as contemporary satisfiability solvers essential unification quantum computing and generalisations of Hilbert s tenth problem The book starts out with a scientific autobiography by Davis and ends with his responses to comments included in the contributions In

addition it includes two previously unpublished original historical papers in which Davis and Putnam investigate the decidable and the undecidable side of Logic as well as a full bibliography of Davis work As a whole this book shows how Davis scientific work lies at the intersection of computability theoretical computer science foundations of mathematics and philosophy and draws its unifying vision from his deep involvement in Logic **A History of Mathematics in the United States and Canada: Volume 1: 1492–1900** David E.
