Lord Kelvin And The Age Of The Earth:

Lord Kelvin and the Age of the Earth Joe D. Burchfield, 2009-05-11 Burchfield charts the enormous impact made by Lord Kelvin's application of thermodynamic laws to the question of the earth's age and the heated debate his ideas sparked among British Victorian physicists, astronomers, geologists, and biologists. Anyone interested in geologic time and that should include all geologists and a fair smattering of biologists, physicists, and chemists should make Burchfield's commendable and time-tested volume part of their personal library. Brent Darymple, *Quarterly Review of Biology*

The Age of the Earth as an Abode Fitted for Life. By the Right Hon. Lord Kelvin,... William Thomson, Baron Kelvin, 1898 *Lord Kelvin and the Age of the Earth* Ralph C. Bowden, 1965 *The Age of the Earth* Joe D. Burchfield, 1969 **Lord Kelvin's Address on the Age of the Earth as an Abode Fitted for Life** Thomas Chrowder Chamberlin, 1899 *Kelvin, Thermodynamics and the Natural World* M.W. Collins, R.C. Dougal, C. Koenig, I. Ruddock, Strathclyde University, UK, 2015-12-14 This volume looks afresh at the life and works of Lord Kelvin, including his standing and relationships with Charles Darwin, T.S. Huxley, and the X Club, thereby throwing new light on the nineteenth-century conflict between the British energy and biology specialists. It focuses on two principal issues. Firstly, there is the contribution made by Kelvin to the formulation of the Laws of Thermodynamics, both personal and in the content of the scientific communications exchanged with other workers such as Joule and Clausius. Secondly, there is Kelvin's impact on the wider field of science, such as thermoelectricity and geology, determination of the age of the earth. Of late, a number of studies and initiatives, including the Centenary celebrations of Kelvin's death and exhibits such as that of the Revolutionary Scientist in the Hunterian Museum, Glasgow, have been undertaken, aiding the redefinition of Kelvin's greatness and achievements. The book also raises awareness to improve our approach to the teaching of elementary thermodynamics by attempting to empathise with Kelvin's perspective. It is completed by a full biography, overviews of various monuments to his memory, and short stories in pictures on the Atlantic cable, Maxwell's Demon, the universities associated with the development of thermodynamics, and the Royal Society of Edinburgh. Scientists and engineers with an interest in thermodynamics and anyone interested in the work of Lord Kelvin will find benefit in *Kelvin Thermodynamics and the Natural World*

Useless Arithmetic Orrin H. Pilkey, Linda Pilkey-Jarvis, 2007 Writing for the general nonmathematician reader and using examples from throughout the environmental sciences Orrin Pilkey and Linda Pilkey Jarvis show how unquestioned faith in mathematical models can blind us to the hard data and sound judgment of experienced scientific fieldwork They begin with the extinction of the North Atlantic cod on the Grand Banks of Canada and then they discuss the limitations of many models across a broad array of crucial environmental subjects Case studies depict how the seductiveness of quantitative models has led to unmanageable nuclear waste disposal practices poisoned mining sites unjustifiable faith in predicted sea level rise rates bad predictions of future shoreline erosion rates overoptimistic cost estimates of artificial beaches and a host of other problems The authors demonstrate how many modelers have been reckless employing fudge factors to assure correct answers and caring little if their models actually worked

Time And Age: Time Machines, Relativity And Fossils Michael Mark Woolfson, 2015-02-11 *Time and Age* explores how time is defined by man It follows the development of our means for measuring time from early methods using the flow of water or the steady burning of candles through to the atomic clock that records time with incredible precision The classical idea of time as something that progresses at a uniform rate and as something that is the same to all observers was overturned by Einstein's Theory of Relativity The conclusions coming from this theory are described including the anti intuitive twin paradox where one twin returning from a journey to a distant star is younger than his twin brother Also covered is how age can be determined in a wide range of situations such as how we work out the age of the Universe to how we calculate the age of artefacts that are just a few centuries old
