Narcolepsy Meeta Goswami, Seithikurippu Ratnas Pandi-Perumal, Michael J. Thorpy, 2011-04-08 Narcolepsy serves as a prototype of how the interaction of high quality clinical research and groundbreaking basic science can collaborate to define the cause of a disease and change forever how we evaluate and treat it There is scarcely a topic in this book that would have been covered in the same way 10 years ago as it is discussed today We are also fortunate that many of the players in this dramatic turnaround have contributed to this volume so that the result is a tapestry of the events that have transformed the field over the last decade that is both authentic and detailed The first section of the book provides much of the basic science background As described in the first two chapters the dramatic convergence of lines of evidence from two different laboratories first demonstrated in 1999 that narcolepsy is a disease of loss of neurotransmission by lateral hypothalamic neurons making the peptides that have been called orexins or hypocretins These findings did much to clarify and unify a field that had puzzled for decades over the fundamental nature of this puzzling disease as reflected in the chapters that review its epidemiology and neuroanatomical and imaging findings

The Sleep of Others and the Transformations of Sleep Research Kenton Kroker, 2007-01-01 We tend to think of sleep as a private concern a night time retreat from the physical world into the realm of the subconscious Yet sleep also has a public side it has been the focal point of religious ritual philosophic speculation political debate psychological research and more recently neuroscientific investigation and medical practice In this first ever history of sleep research Kenton Kroker draws on a wide range of material to present the story of how an investigative field at one time dominated by the study of dreams slowly morphed into a laboratory based discipline The result of this transformation Kroker argues has changed the very meaning of sleep from its earlier conception to an issue for public health and biomedical intervention Examining a vast historical period of 2500 years Kroker separates the problems associated with the history of dreaming from those associated with sleep itself and charts sleep related diseases such as narcolepsy insomnia and sleep apnea He describes the discovery of rapid eye movement REM during the 1950s and shows

how this discovery initiated the creation of dream laboratories that later emerged as centres for sleep research during the 1960s and 1970s Kroker's work is unique in subject and scope and will be enormously useful for both sleep researchers medical historians and anybody who's ever lost a night's sleep **The Terror That Comes in the Night** David J.

Hufford, 2015-05-05 David Hufford's work exploring the experiential basis for belief in the supernatural focusing here on the so-called Old Hag experience a psychologically disturbing event in which a victim claims to have encountered some form of malign entity while dreaming or awake Sufferers report feeling suffocated held down by some force paralyzed and extremely afraid The experience is surprisingly common the author estimates that approximately 15 percent of people undergo this event at some point in their lives Various cultures have their own name for the phenomenon and have constructed their own mythology around it the supernatural tenor of many Old Hag stories is unavoidable Hufford as a folklorist is well placed to investigate this puzzling occurrence **Sleep Disorders and Sleep Promotion in Nursing Practice** Nancy

Sutcliffe, 2007-04-25 The first report that rapid eye movements occur in sleep in humans was published in 1953 The research journey from this point to the realization that sleep consists of two entirely independent states of being eventually labeled REM sleep and non REM sleep was convoluted but by 1960 the fundamental duality of sleep was well established including the description of REM sleep in cats associated with wide awake EEG patterns and EMG suppression The first report linking REM sleep to a pathology occurred in 1961 and a clear association of sleep onset REM periods cataplexy hypnagogic hallucinations and sleep paralysis was fully established by 1966 When a naïve individual happens to observe a full-blown cataplexy attack it is both dramatic and unnerving Usually the observer assumes that the loss of muscle tone represents

syncope or seizure In order to educate health professionals and the general public Christian Guilleminault and I made movies of full blown cataplectic episodes not an easy task We showed these movies of cataplexy attacks to a number of professional audiences and were eventually rewarded with the report of a similar abrupt loss of muscle tone in a dog We were able to bring the dog to Stanford University and with this as the trigger we were able to develop the Stanford Canine Narcolepsy Colony Breeding studies revealed the genetic determinants of canine narcolepsy an autosomal recessive gene we termed canarc1 Emmanuel Mignot took over the colony in 1986 and began sequencing DNA finally isolating canarc1 in 1999

Zen and the Brain James H. Austin, 1999-06-04 A neuroscientist and Zen practitioner interweaves the latest research on the brain with his personal narrative of Zen Aldous Huxley called humankind s basic trend toward spiritual growth the perennial philosophy In the view of James Austin the trend implies a perennial psychophysiology because awakening or enlightenment occurs only when the human brain undergoes substantial changes What are the peak experiences of enlightenment How could these states profoundly enhance and yet simplify the workings of the brain Zen and the Brain presents the latest evidence In this book Zen Buddhism becomes the opening wedge for an extraordinarily wide ranging exploration of consciousness In order to understand which brain mechanisms produce Zen states one needs some understanding of the anatomy physiology and chemistry of the brain Austin both a neurologist and a Zen practitioner interweaves the most recent brain research with the personal narrative of his Zen experiences The science is both inclusive and rigorous the Zen sections are clear and evocative Along the way Austin examines such topics as similar states in other disciplines and religions sleep and dreams mental illness consciousness altering drugs and the social consequences of the advanced stage of ongoing enlightenment
