Compounds for Optoelectronic and Electromagnetic Applications Peter Capper,1997-10-31 The field of narrow gap II VI materials is dominated by the compound mercury cadmium telluride MCT or $\text{Hg}_{1-x}\text{Cd}_x\text{Te}$ By varying the x value material can be made to cover all the important infrared IR ranges of interest It is probably true to say that MCT is the third most studied semiconductor after silicon and gallium arsenide As current epitaxial layers of MCT are mainly grown on bulk CdTe family substrates these materials are included in this book although strictly of course they are not narrow gap This book is intended for readers who are either new to the field or are experienced workers in the field who need a comprehensive and up to date view of this rapidly expanding area To satisfy the needs of the first group each chapter discusses the principles underlying each topic and some of the historical background before bringing the reader the most recent information available For those currently in the field the book can be used as a collection of useful data as a guide to the literature and as an overview of topics covering the wide range of work areas **Physics and Properties of Narrow Gap Semiconductors**

Junhao Chu,Arden Sher,2007-11-21 Narrow gap semiconductors obey the general rules of semiconductor science but often exhibit extreme features of these rules because of the same properties that produce their narrow gaps Consequently these materials provide sensitive tests of theory and the opportunity for the design of innovative devices For example narrow gap semiconductors are the most important materials for the preparation of advanced modern infrared systems In this book the authors offer clear descriptions of crystal growth and the fundamental structure and properties of these unique materials Topics covered include band structure optical and transport properties and lattice vibrations and spectra A thorough treatment of the properties of low dimensional systems and their relation to infrared applications is provided In addition to covering the technology of photoconductive detectors photovoltaic detectors metal insulator semiconductor devices quantum well infrared photodetectors infrared lasers and single photon detectors **Physics and Properties of Narrow Gap Semiconductors** helps readers to understand semiconductor physics and related areas of materials science and how they relate to advanced opto electronic devices **Soil Resource Inventories and Development Planning** ,1979

Advanced Materials '93 H. Aoki,2013-09-24 **Advanced Materials 93 IIA Biomaterials Organic and Intelligent Materials** contains the proceedings of the Third International Union of Materials Research Societies International Conference on Advanced Materials held in Tokyo Japan from August 31 to September 4 1993 The conference provided a forum for reviewing the state of the art in advanced materials such as biomaterials and organic and intelligent materials Topics covered range from catalytic materials and ordered polymers to biosensors and photo and electro responsive materials The construction and functions of organic thin films are also discussed Comprised of 154 chapters this volume first examines the in vitro

interaction of carcinostatic substances adsorbed on hydroxyapatite microcrystals with cells derived from cancers The reader is then introduced to hydrothermal synthesis of plate like hydroxyapatite crystals biocompatibility and mechanical properties of all ceramic crowns and catalytic activity of zeolite supported noble metals for hydrodesulfurization of thiophene Subsequent chapters focus on the functionalization of propane by the catalytic oxidation process block copolymers synthesized by free radical polymerization mechanical properties of polyvinyl acetate incorporated with silica gel by sol gel process and alignment of liquid crystal molecules using chemically adsorbed monolayers This book will appeal to practitioners and researchers in the fields of materials science and biotechnology *Infrared Photography: a DDC*
