Biological Aspects of Radiation Protection T. Sugahara, O. Hug, 1971 In the maintenance and development of sound standards of radiation protection many types of enquiry are important These range from the purely technical examination of the ways in which exposure may occur or radionuclides may enter the body under existing or new conditions of occupational activity to the most fundamental studies of the interaction of high energy particulate radiation with matter or the metabolic localisation and kinetics of unfamiliar radionuclides One of the most important and most basic problems however is to establish a quantitative estimate for the frequency with which various types of injury would be induced in man following exposure to low doses of radiation delivered at low dose rates No sound limits can be proposed for appropriately safe levels of occupational or population exposure unless the associated hazard or its maximum likely value can be at least approximately assessed It is one of the most important tasks of those concerned with radiation protection that these criteria should be kept under constant review in the light of developing knowledge and that the fields in which further information is needed should be defined and described

Understanding Radiation Biology Kenneth Chadwick, 2019-11-15 This book provides a qualitative and quantitative exploration of the action of radiation on living matter which leads to a complete and coherent interpretation of radiation biology It takes readers from radiation induced molecular damage in the nucleus of the cell and links this damage to cellular effects such as cell killing chromosome aberrations and mutations before exploring organ damage organism lethality and cancer induction It also deals with radiological protection concepts and the difficulties of predicting the dose effect relationship for low dose and dose rate radiation risk The book ends with separate chapters dealing with the effects of UV light exposure and risk classification of chemical mutagens both of which are derived by logical extensions of

the radiation model This book will provide the basic foundations of radiation biology for undergraduate and graduate students in medical physics biomedical engineering radiological protection medicine radiology and radiography Features Presents a comprehensive insight into radiation action on living matter Contains important implications for radiological protection and regulations Provides analytical methods for applications in radiotherapy Radiation Protection in Medical Radiography - E-Book Kelli Welch Haynes, Mary Alice Statkiewicz Sherer, Paula J. Visconti, E. Russell Ritenour, 2013-08-07 Sherer's Radiation Protection in Medical Radiography provides vital information on radiation protection and biology in a clear concise and easy to understand manner Building from basic to more complex concepts this book also presents radiation physics cell structure effects of radiation on humans at the cellular and systemic levels regulatory and advisory limits for human exposure to radiation and the implementation of patient and personnel radiation protection practices Historical perspectives explain the effects of low level ionizing radiation and demonstrate the link between radiation and cancer and other diseases Chapter outlines and objectives highlighted key terms bulleted summaries and review questions help you follow and understand the material Full color text and art programs enhance visual appeal reinforce important elements and hold your interest Review questions with answers help you assess your comprehension Student Workbook helps you review important text information presented in the book Companion online products provide you with an online supplement for the Sherer text Updated NCRP and ICRP regulations provide the regulatory perspective you need for practice New information on Chernobyl Auger electrons Expanded discussions about CR and DR especially in respect to mAs Expanded section on CT Evolve Student Resources including web links **Radiation Protection in Nuclear Medicine** Sören Mattsson, Christoph Hoeschen, 2012-09-13 This book explains clearly and in detail all aspects of radiation protection in nuclear medicine including measurement quantities and units detectors and dosimeters and radiation biology Discussion of radiation doses to patients and to embryos fetuses and children forms a central part of the book Phantom models biokinetic models calculations and software solutions are all considered and a further chapter is devoted to quality assurance and reference levels Occupational exposure also receives detailed attention Exposure resulting from the production labeling and injection of radiopharmaceuticals and from contact with patients is discussed and shielding calculations are explained The book closes by considering exposure of the public and summarizing the rules of thumb for radiation protection in nuclear medicine This is an ideal textbook for students and a ready source of useful information for nuclear medicine specialists and medical physics experts *The Future of Low Dose Radiation Research in the United States* National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, 2019-12-13 Exposures at low doses of radiation generally taken to mean doses below 100 millisieverts are of primary interest for setting standards for protecting individuals against the adverse effects of ionizing radiation However there are considerable uncertainties associated with current best estimates of risks and gaps in knowledge on critical scientific issues that relate to low dose radiation The

Nuclear and Radiation Studies Board of the National Academies hosted the symposium on The Future of Low Dose Radiation Research in the United States on May 8 and 9 2019 The goal of the symposium was to provide an open forum for a national discussion on the need for a long term strategy to guide a low dose radiation research program in the United States The symposium featured presentations on low dose radiation programs around the world panel discussions with representatives from governmental and nongovernmental organizations about the need for a low dose radiation research program reviews of low dose radiation research in epidemiology and radiation biology including new directions and lessons to be learned from setting up large research programs in non radiation research fields This publication summarizes the presentation and discussion of the symposium
