Игорь Борисович Кудряшов, 2008 The book is concerned with features analysis of radiation damage to living matter at different levels of its organisation beginning from the molecular level The general theory of the mechanisms of biological action of radiation based on four logically connected principles of radiation biology is presented for the first time The book contains abundant material on primary and secondary processes of the response of living systems to radiation the mechanisms of direct and indirect action of radiation through radiolysis of water and lipids a detailed consideration of the theory of targets DNA and biological membranes and the problems of high and low dose irradiation in the context of present day The systemic response of the cell to irradiation oxidative stress endogenous background radioresistance damage and repair of biological membranes and DNA systemic protection against radiation is approximated Presentation of these

important problems is preceded by an up to date evaluation of some aspects regarding dosimetry of ionising radiation

Integrated Molecular and Cellular Biophysics Valerica Raicu, Aurel Popescu, 2008-06-17 Biophysics represents perhaps one of the best examples of interdisciplinary research areas where concepts and methods from disciplines such as physics biology chemistry colloid chemistry and physiology are integrated It is by no means a new field of study and has actually been around initially as quantitative physiology and partly as colloid science for over a hundred years For a long time biophysics has been taught and practiced as a research discipline mostly in medical schools and life sciences departments and excellent biophysics textbooks have been published that are targeted at a biologically literate audience With a few exceptions it is only relatively recently that biophysics has started to be recognized as a physical science and integrated into physics departments curricula sometimes under the new name of biological physics In this period of crystallization and possible redefinition of biophysics there still exists some uncertainty as to what biophysics might actually represent A particular tendency among physicists is to associate biophysics research with the development of powerful new techniques that should eventually be used not by physicists to study physical processes in living matter but by biologists in their biological investigations There is value in that judgment and excellent books have been published that introduce the interested reader to the use of physical principles for the development of new methods of investigation in life sciences University Curricula in Radiological Health United States.
