*Radiation Damage in DNA* Alfred F. Fuciarelli, John D. Zimbrick, 1995      **Radiation Damage in Biomolecular Systems** Gustavo García Gómez-Tejedor, Martina Christina Fuss, 2012-01-04 Since the discovery of X rays and radioactivity ionizing radiations have been widely applied in medicine both for diagnostic and therapeutic purposes The risks associated with radiation exposure and handling led to the parallel development of the field of radiation protection Pioneering experiments done by Sanche and co workers in 2000 showed that low energy secondary electrons which are abundantly generated along radiation tracks are primarily responsible for radiation damage through successive interactions with the molecular constituents of the medium Apart from ionizing processes which are usually related to radiation damage below the ionization level low energy electrons can induce molecular fragmentation via dissociative processes such as internal excitation and electron attachment This prompted collaborative projects between different research groups from European countries together with other specialists from Canada the USA and Australia This book summarizes the advances achieved by these research groups after more than ten years of studies on radiation damage in biomolecular systems An extensive Part I deals with recent experimental and theoretical findings on radiation induced damage at the molecular level It includes many contributions on electron and positron collisions with biologically relevant molecules X ray and ion interactions are also covered Part II addresses different approaches to radiation damage modelling In Part III biomedical aspects of radiation effects are treated on different scales After the physics oriented focus of the previous parts there is a gradual transition to biology and medicine with the increasing size of the object studied Finally Part IV is dedicated to current trends and novel techniques in radiation reserach and the applications hence arising It includes new developments in radiotherapy and related cancer therapies as well as technical optimizations of accelerators andtotally new equipment designs giving a glimpse of the near future of radiation based medical treatments      *Electron Paramagnetic Resonance* Bruce C Gilbert, N M Atherton, M J Davies, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have

had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume

**Effects of X-ray and Computed Tomography Exposure on the Amplification of DNA from Bone** Britta May Grieshaber, 2003 Consequences of the Chernobyl Catastrophe on Human Health Elena Borisovna Burlakova, 1999 This important book delineates experimental studies of effects of low dose irradiation on biological objects organisms cells and biomolecules and presents theoretical concepts related to this issue The problem of low dose irradiation has many aspects theoretical what is truth populist political and bureaucratic low doses versus the atomic industry The book contains important works dealing with the serious effects of low dose irradiation an adaptive response It is known that a subsequent high dose irradiation of cells and organisms irradiated earlier with low doses causes lesser damages than after irradiation with a high dose Some of the authors consider a dependence of an adaptive response on the radiation dose and dose rate and on the time span between the first exposure to an adaptive dose and the second one Scientists who believe in a radiobiological dogma that the higher dose and the dose rate the stronger the effect cannot explain the observed changes in the state of health by the irradiation effects and try to discover other factors responsible for these changes It is concluded that low doses of radiation are indeed dangerous because low doses above all affect our sensitivity to the action of other damaging factors of the endogenic and exogenic nature A number of these environmental factors is considerable Their effect is evidently not fatal and we can be protected from them by making efforts to study the specific effects of low doses instead of verbal discussion about whether low doses affect the organism cells and population or not BOOK COVER *Environmental Health Perspectives*, 1993 Chemical Abstracts Service Source Index American Chemical Society. Chemical Abstracts Service, 1907 A key source to journal and conference abbreviations in the sciences Although it focuses on chemistry other scientific and engineering disciplines are also well represented In addition to the abbreviation and full title each entry also contains publishing info title changes language and frequency of publication and libraries owning that title Over 130 000 entries representing more than 70 000 publications dating back to 1907 are included
