

The background of the slide features a faint, yellow-toned illustration. On the right side, there is a full-body anatomical drawing of a human figure, showing internal organs and skeletal structure. On the left side, there is a depiction of a large, domed building, likely a government or institutional structure, with a prominent dome and arched windows.

Under the Radar Ellen Leopold, 2008-09-03 At the end of the Second World War a diagnosis of cancer was a death sentence Sixty years later it is considered a chronic disease rather than one that is invariably fatal Although survival rates have improved the very word continues to evoke a special terror and guilt inspiring

scientists and politicians to wage war against it In *Under the Radar* Ellen Leopold shows how nearly every aspect of our understanding and discussion of cancer bears the imprint of its Cold War entanglement The current biases toward individual rather than corporate responsibility for rising incidence rates research that promotes treatment rather than prevention and therapies that can be patented and marketed all reflect a largely hidden history shaped by the Cold War Even the language we use to describe the disease such as the guiding metaphor for treatment fight fire with fire can be traced back to the middle of the twentieth century Writing in a lucid style Leopold documents the military governmental industrial and medical views of radiation and atomic energy to examine the postwar response to cancer through the prism of the Cold War She explores the role of radiation in cancer therapies today using case studies and mammogram screening in particular to highlight the surprising parallels Taking into account a wide array of disciplines this book challenges our understanding of cancer and how we approach its treatment Examines the postwar response to cancer through the prism of the Cold War Goes beyond medical science to look at the influence of Cold War policies on the way we think about cancer today Links the experience of postwar cancer patients with the broader evolution of what have become cancer industries Traces the history of human made radiation as a state sponsored environmental toxin
