Radiation Legacy Of The Soviet Nuclear Complex:

The Radiation Legacy of the Soviet Nuclear Complex Nikolai N. Egorov, Vladimir M. Novikov, Frank L. Parker, Victor K. Popov, 2014-04-08 A study of the legacy of nuclear contamination in the Soviet Union It gives the location and characteristics of the accumulated radioactive material and wastes by each sector from ore and mining to use and disposal It describes types of storage capacity and utilization age and location It gives information on the territories and locations contaminated by normal operations and by accidents from which strategic plans for remediation can be formulated *The Radiation Legacy of the Soviet Nuclear Complex*, 1999 *Risk Methodologies for Technological Legacies* Dennis Bley, Vitaly A. Eremenko, 2012-12-06 The Cold War Era left the major participants the United States and the former Soviet Union FSU with large legacies in terms of both contamination and potential accidents Facility contamination and environmental degradation as well as the accident vulnerable facilities and equipment are a result of weapons development testing and production Although the countries face similar issues from similar activities important differences in waste management practices make the potential environmental and health risks of more immediate concern in the FSU and Eastern Europe In the West most nuclear and chemical waste is stored in known contained locations while in the East much of the equivalent material is unconfined contaminating the environment In the past decade the U S started to address and remediate these Cold War legacies Costs have been very high and the projected cost estimates for total cleanup are still increasing Currently in Russia the resources for starting such major activities continue to be unavailable Radiation Legacy of the 20th Century, 2002 **Cleaning Up Sites Contaminated with Radioactive Materials** Russian Academy of Sciences, National Research Council, Policy and Global Affairs, Development, Security, and Cooperation, Office for Central Europe and Eurasia, Committee on Cleaning Up of Radioactive Contamination: Russian Challenges and U.S. Experience, 2009-02-23 This publication features papers presented at the Workshop on Cleaning Up Sites Contaminated with Radioactive Materials held in Moscow in June 2007 This activity was organized by the National Academies in cooperation with the Russian Academy of Sciences and with funding provided by the Russell Family Foundation The workshop was designed to promote exchanges of information on specific contaminated sites in Russia and elsewhere and to stimulate greater attention to the severity of the problems and the urgent need to clean up sites of concern to the local and international communities *The Soviet Union and Global Environmental Change* Jonathan D. Oldfield, 2021-05-26 This book argues that the Soviet Union was a highly influential actor in furthering understandings of society nature interaction on the international stage and played a key role in helping to shape conceptualize and assess the relationship between humankind and the Earth system It considers how humankind s capacity to affect physical and biological systems at a global scale was acknowledged and studied by Soviet scientists discusses how the interaction between Soviet and Western scientists stimulated the development of new technologies and insights which simultaneously facilitated a more profound understanding of the Earth s physical and biological systems and explores how

Soviet scientists drew upon pre revolutionary intellectual traditions in order to make sense of society nature interaction and did so in collaboration with a range of international initiatives Overall the book provides a deep analysis of how Soviet scientists conceptualized society nature interaction and influenced the understanding of global physical and biological systems Furthermore it is argued that this intellectual legacy remains of importance today with respect to the activities of Russian science and contemporary global environmental challenges **Global Interdependence** Akira Iriye,Jürgen Osterhammel,2014-01-14 Global Interdependence provides a new account of world history from the end of WWII to the present an era when transnational communities challenged the long domination of the nation state Leading scholars elucidate the political economic cultural and environmental forces that have shaped the planet in the past sixty years

Chernobyl - What Have We Learned? Yasuo Onishi,Oleg V. Voitsekhovich,Mark J. Zheleznyak,2007-06-03 Twenty years ago on April 26 1986 Unit 4 of the Chernobyl Nuclear Power Plant experienced a nuclear reactor accident and released six times more radionuclides into the atmosphere than the Hiroshima atomic bomb The accident significantly damaged the environment and is expected to result in as many as 4000 deaths due to leukemia and other cancers The cause of the accident was specific to a particular Soviet built reactor but the environmental and human consequences are applicable to Western nuclear plant accidents Contrary to public perception the former Soviet Union did what they could to protect the public from the Chernobyl accident within funding restrictions They involved the highest level of political and scientific leaders and even conducted public surveys to identify concerns and fears However the secrecy with which the information was treated caused mistrust of the Chernobyl assessment and contributed to the widespread mental health problems associated with the accident Some Chernobyl countermeasures were successful but many were ineffective or made things worse We hope that the details presented in this book may be useful for Western countries in preparing for possible accidents or potential terrorist attacks with nuclear or chemical agents The assessment of the Chernobyl accident its impacts and its count measures and remediation has been published widely in many Western nations but much of the research is still known only in Ukraine and Russia International Seminar on Nuclear War and Planetary Emergencies Richard C.

Ragaini,2004 The proceedings have been selected for coverage in **Environmental Histories of the Cold War** J. R. McNeill,Corinna R. Unger,German Historical Institute (Washington, D.C.),2010-04-30 Explores the links between the Cold War and the global environment ranging from the environmental impacts of nuclear weapons to the political repercussions of environmentalism Engineering Earth Stanley D. Brunn,2011-03-19 This is the first book to examine the actual impact of physical and social engineering projects in more than fifty countries from a multidisciplinary perspective The book brings together an international team of nearly two hundred authors from over two dozen different countries and more than a dozen different social environmental and engineering sciences Together they document and illustrate with case studies maps and photographs the scale and impacts of many megaprojects and the importance of studying these projects in historical

contemporary and postmodern perspectives This pioneering book will stimulate interest in examining a variety of both social and physical engineering projects at local regional and global scales and from disciplinary and trans disciplinary perspectives

Advanced Nuclear Energy Systems Toward Zero Release of Radioactive Wastes M. Saito,T. Sawada,2002-11-11

This volume is a collection of the papers presented at the International Seminar on Advanced Nuclear Energy Systems toward Zero Release of Radioactive Wastes which was held in Japan in November 2000 Scientists and engineers working in academia research organizations and industry came together to discuss the role and contributions of nuclear energy to the environmental issues in the new millennium It provided a forum for open discussions about the pursuit of solutions for the reduction of nuclear wastes based on the accelerator and fusion technologies in addition to the advanced fission technology to harmonize the nuclear energy systems with the global environment It also promoted future international collaboration in the following research fields the role of nuclear energy in the new millennium waste management transmutation of minor actinides and fission products advanced fission systems accelerator driven systems fusion systems nuclear database and advanced nuclear fuel cycles for transmutation of wastes Published originally as a special issue volume 40 3 4 of the international journal Progress in Nuclear Energy *Radiological Risk Assessment and Environmental Analysis* John E. Till,Helen A. Grogan,2008-07-10 A comprehensive book that explains methods used for estimating risk to people exposed to radioactive materials released to the environment by nuclear facilities or in an emergency such as a nuclear terrorist event

Techno-Fixers Sean F. Johnston,2020-03-26 This is the story of a seductive idea Over the past century the potential of new technology to solve social dilemmas has captivated modern culture From apps that encourage physical activity to airport scanners meant to prevent terrorism the concept that clever innovation can improve society is irresistible but faith in such technological fixes is seldom questioned Where did this idea come from what makes it so appealing and how does it endanger our future Techno Fixers traces the source of modern confidence in technology to engineering hubris radical utopian movements science fiction fanzines policy makers soundbites corporate marketing and optimistic consumer culture from the turn of the twentieth century until today Sean Johnston demonstrates that through the promotion of prominent government scientists technocrats entrepreneurs and popular media modern invention became the favourite tool for addressing human problems and society's ills Nonetheless when it comes to assessing the success of cigarette filters as the solution to safe smoking or DDT as the answer for agricultural productivity the evidence is sobering Cautioning that the rhetoric of technological fixes seldom matches reality Johnston examines how employing innovation to bypass traditional methods can foster as many problems as it solves A critical examination of modern faith in technology Techno Fixers evaluates past mistakes present implications and future opportunities for innovating societies The Neutron's Children Sean Johnston,2012-04-26 This account tracks the Allied atomic energy experts who emerged from the Manhattan Project to explore optimistic but distinct paths in the USA UK and Canada Characterized successively as admired atomic scientists

mistrusted spies and heroic engineers their identities were ultimately shaped by nuclear accidents

The Great Acceleration J. R. McNeill, Peter Engelke, 2016-04-04 The Earth has entered a new age the Anthropocene in which humans are the most powerful influence on global ecology Since the mid twentieth century the accelerating pace of energy use greenhouse gas emissions and population growth has thrust the planet into a massive uncontrolled experiment The Great Acceleration explains its causes and consequences highlighting the role of energy systems as well as trends in climate change urbanization and environmentalism More than any other factor human dependence on fossil fuels inaugurated the Anthropocene Before 1700 people used little in the way of fossil fuels but over the next two hundred years coal became the most important energy source When oil entered the picture coal and oil soon accounted for seventy five percent of human energy use This allowed far more economic activity and produced a higher standard of living than people had ever known but it created far more ecological disruption We are now living in the Anthropocene The period from 1945 to the present represents the most anomalous period in the history of humanity's relationship with the biosphere Three quarters of the carbon dioxide humans have contributed to the atmosphere has accumulated since World War II ended and the number of people on Earth has nearly tripled So far humans have dramatically altered the planet's biogeochemical systems without consciously managing them If we try to control these systems through geoengineering we will inaugurate another stage of the Anthropocene Where it might lead no one can say for sure

The Soviet Nuclear Weapon Legacy Marco De Andreis, Francesco Calogero, 1995 The breakup of the Soviet Union left a cold war nuclear legacy consisting of tens of thousands of nuclear weapons and a sprawling infrastructure for their production and maintenance This book examines the fate of this vast nuclear weapon complex and the unprecedented non proliferation challenges associated with the breakup of a nuclear weapon state It describes the high level diplomatic bargaining efforts to consolidate in Russia the nuclear weapons based in newly independent Belarus Kazakhstan and Ukraine and to strengthen central control over these weapons It surveys the problems associated with dismantling nuclear weapons and the difficulties involved in safely storing and disposing of large stockpiles of fissile material It reviews the key provisions of the principal nuclear arms control measures and initiatives including the START I and START II treaties Finally the book assesses the contribution of international assistance programmes to the denuclearization process under way in the former Soviet Union

The Environment Chris C. Park, 2001 The second edition of this fully integrated introductory text for courses in environmental studies and physical geography builds on the resounding success of the first edition providing a comprehensive account of modern environmental issues and the physical and socio economic framework in which they are set It explains the principles and applications of the different parts of the Earth's system the lithosphere atmosphere hydrosphere and the biosphere and explains the interrelationships within and between these systems It explores the present environmental crisis examines how the planet Earth fits into the wider universe and explores human environment interactions

Health Physics Joseph John Bevelacqua, 2016-03-30 The

book bridges the gap between existing health physics textbooks and reference material needed by a practicing health physicist as the 21st century progresses This material necessarily encompasses emerging radiation generating technologies advances in existing technology and applications of existing technology to new areas The book is written for advanced undergraduate and graduate science and engineering courses It is also be a useful reference for scientists and engineers

The Cambridge History of the Cold War: Volume 3, Endings Melvyn P. Leffler, Odd Arne Westad, 2012-01-26 Volume III of The Cambridge History of the Cold War examines the evolution of the conflict from the Helsinki Conference of 1975 until the Soviet collapse in 1991 A team of leading scholars analyzes the economic social cultural religious technological and geopolitical factors that ended the Cold War and discusses the personalities and policies of key leaders such as Brezhnev Reagan Gorbachev Thatcher Kohl and Deng Xiaoping The authors show how events throughout the world shaped the evolution of Soviet American relations and they explore the legacies of the superpower confrontation in a comparative and transnational perspective Individual chapters examine how the Cold War affected and was affected by environmental issues economic trends patterns of consumption human rights and non governmental organizations The volume represents the new international history at its best emphasizing broad social economic demographic and strategic developments while keeping politics and human agency in focus
