Jožef Stefan: His Scientific Legacy on the 175th Anniversary of His Birth John C. Crepeau, 2013-02-20 Most scientists and engineers are familiar with the name Josef Stefan

primarily from the Stefan Boltzmann law which relates the amount of energy transferred by radiation to the absolute temperature raised to the fourth power Stefan determined this law from experimental data and it was later theoretically verified by his former student Ludwig Boltzmann However it is interesting to know that this is the same Stefan who lent his name to the solid liquid phase change problem and concepts related to molecular diffusion and convective motion driven by surface evaporation or ablation Stefan counted among his students Sigmund Freud who was so inspired by his physics instructor that he incorporated scientific methods into psychoanalysis This invaluable book details not only Josef Stefan's original contributions in these areas but the current state of the art of his pioneering work **Smart Energy Strategies**

,2008 The enormous challenge of creating a longterm sustainable energy system calls for the participation of engineers natural and social scientists They can contribute both through their research and by helping to craft strategies that steer the future development of the system A sustainable energy system cannot be developed by technical fixes alone action is required on a broad front including institutional and regulatory changes There is an abundance of scientific evidence on which to base decisions on how to proceed Still research has a crucial role to play as well Smart Energy Strategies highlights smart solutions advances in technical and social science energy research particularly advances related to new information technology e g control and communication and experience with targeted applications of information technology in the supply and consumption of energy The conference has focused on smart strategies taking into account current technical and institutional systems with their inertia and shortcomings future energy related challenges energy security the growing energy needs of the disadvantaged and unintended consequences of energy systems particularly climate change but also uncontrolled money flows smart technical institutional and regulatory mechanisms for meeting these challenges
