Radiolabeled Monoclonal Antibodies For Imaging And Therapy:

Radiolabeled Monoclonal Antibodies for Imaging and Therapy Suresh C. Srivastava, 2013-03-14 The advent of hybridoma technology leading to the successful production of monoclonal antibodies against a variety of tumor associated antigens has during the last decade provided a very powerful tool for research and clinical investigations These highly specific reagents have essentially replaced the polysera of the earlier days The successful demonstration of the many wide ranging capabilities of the monoclonal antibody technique has already begun to exert an enormous impact on diverse areas of research in basic science and medicine In particular the potential of monoclonal antibodies to serve as carriers for selective targeting of radionuclides to tumors for diagnosis or therapy has stimulated an intense surge of research interest and even revived hopes of realizing Ehrlich's concept of the magic bullet Indeed the technology appears to be on the threshold of a revolution in diagnosing and treating malignant disease Much work remains to be done however and even though the progress has been impressive results to date have shown only moderate success There is no question that the limited success we have achieved thus far is merely a prelude to the many more exciting developments yet to come

Radiolabeled Monoclonal Antibodies for Imaging and Therapy, 1986 This meeting focused on areas of research on radiolabeled monoclonal antibodies Topics covered included the production purification and fragmentation of monoclonal antibodies and immunochemistry of hybridomas the production and the chemistry of radionuclides the radiohalogenation and radiometal labeling techniques the in vivo pharmacokinetics of radiolabeled antibodies the considerations of immunoreactivity of radiolabeled preparations the instrumentation and imaging techniques as applied to radioimmunodetection the radiation dosimetry in diagnostic and therapeutic use of labeled antibodies the radioimmunoscintigraphy and radioimmunotherapy studies and perspectives and directions for future research Tutorial as well as scientific lectures describing the latest research data on the above topics were presented Three workshop panels were convened on Methods for Determining Immunoreactivity of Radiolabeled Monoclonal Antibodies Problems and Pitfalls Radiobiological and Dosimetric Considerations for Immunotherapy with Labeled Antibodies and The Human Anti Mouse Antibody Response in Patients

Cancer Therapy with Radiolabeled Antibodies David M. Goldenberg, 2018-01-18 Cancer Therapy with Radiolabeled Antibodies explores the most current experimental and clinical advances in the newly emerging field of cancer radioimmunotherapy RAIT Providing a multidisciplinary and international context some of the world's leading experts examine the problems and prospects of RAIT from radiation immunological chemical physical physiological and clinical perspectives with both overviews and original research Discussions cover the up to date clinical results in the RAIT of ovarian breast colorectal and brain cancers as well as the current status of RAIT in the management of B cell lymphomas Radiobiology dosimetry radiochemistry targeting biology in experimental models clinical experiences in hematopoietic and solid tumors and new approaches to improve cancer radioimmunotherapy are also discussed In addition new dosimetry

concepts new labeling methods new concepts of antibody pharmacokinetics and new methods to enhance selective cancer radioimmunotherapy are included *Monoclonal Antibody Therapy of Human Cancer* Kenneth A. Foon, Alton C. Morgan, 2012-12-06 KENNETH A FOON and ALTON C MORGAN JR Passive immunotherapy using heteroantisera for the treatment of cancer in animals and humans has been studied for over 50 years Attempts have been made to treat animal tumors with sera from immunized syngeneic allogeneic or xenogeneic animals A number of studies of passive immunotherapy using heterologous antisera in humans have also been performed These studies have generally been attempted in patients with large tumor burdens and as would be expected results have been transient at best A wide variety of solid tumors as well as leukemias and lymphomas have been treated with antisera raised in sheep horses rabbits and goats Problems such as anaphylaxis serum sickness and severe cytopenias have been encountered with these antisera There are a number of potential mechanisms by which unconjugated antibodies might be cytotoxic to tumor cells Antibodies bound to the cell surface membrane of tumor cells may lead to cell lysis by complement dependent or antibody dependent cellular cytotoxicity Circulating tumor cells bound by antibody may be more susceptible to phagocytosis by the reticuloendothelial system Antibody bound to the cell surface membrane of tumor cells may enhance immunogenicity of the tumor cell leading to activation of the host's immune system **Biomedical Index to PHS-supported Research: pt. F. (Russ) Knapp, Ashutosh Dash, 2016-01-20 This book provides detailed information on therapeutic radiopharmaceuticals and discusses emerging technologies which have potential for broad clinical implementation Recent advances in molecular biology radiopharmaceutical chemistry and radioisotope production have stimulated a new era for the

use of radiopharmaceuticals for targeted radionuclide therapy TRT Emerging clinical trials include use of peptides and monoclonal antibodies radiolabeled with therapeutic radionuclides for cancer therapy In addition small molecules are used for the treatment of chronic diseases such as metastatic bone pain palliation and radiation synovectomy of inflammatory joints In the interventional arena therapy of primary and metastatic liver cancer and arterial restenosis following angioplasty of both the coronary and peripheral arteries are being explored Reactor and accelerator production of therapeutic radioisotopes is also integrated into these discussions The development and use of radiopharmaceutical targeting characteristics required for treatment of specific disease processes and how these are implemented for radiopharmaceutical design strategies are also described Radiopharmaceuticals for Therapy will benefit audiences in nuclear medicine and radionuclide therapy and will thus prove an invaluable source of up to date information for students radiopharmaceutical scientists and professionals working in the radiopharmacy and nuclear medicine specialties *Targeted Radionuclide*

Therapy Tod W. Dillman, 2009-08-29 At the time of the first edition of Principles of Cancer Biotherapy in 1987 this book represented the first comprehensive textbook on biological therapy In 1991 when the second edition was published there was still some doubt on the part of many oncologists and cancer researchers as to the therapeutic value of these new approaches By 2003 and the fourth edition it was generally agreed that biopharmaceuticals were producing major opportunities for new cancer therapies Cancer biotherapy has now truly matured into the fourth modality of cancer treatment This fifth revised edition describes the tremendous progress that has been made in recent years using biologicals in cancer treatment This book summarizes an evolving science and a rapidly changing medical practice in biotherapy In this new millennium it is now possible to envision a much more diversified system of cancer research and treatment that will afford greater opportunities for a patient s personalized cancer treatment This was first envisioned in the 1987 initial edition of this textbook and is now a new and popular approach to cancer treatment Some forms of cancer biotherapy use the strategy of tumor stabilization and control through continued biological therapy akin to the use of insulin in the treatment of diabetes This textbook illustrates new methods of thinking and new strategies for control of cancer It is always difficult to move from past dogma to future

opportunity but this fifth edition of Principles of Cancer Biotherapy illustrates why it is so important to the patients for researchers and clinicians to explore and quickly apply these new opportunities in cancer biotherapy

Cancer Imaging with Radiolabeled Antibodies David M. Goldenberg, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology text books are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good in depth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes that aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date and easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion first by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc and second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more
