Self Assessment in Axial Skeleton Musculoskeletal Trauma X-rays Karen Sakthivel-Wainford, 2009 Many practitioners are now continuing to expand their reporting skills from appendicular skeleton to include the axial skeleton in trauma Other allied profession may also be reviewing axial skeleton trauma radiographs for instance nurse practitioners such as in cases of hip trauma Many practitioners initially fear reviewing axial skeleton radiographs understandably as missing an injury may have dire consequences but with training audit and care this fear can be overcome and one can look forward to the challenge of axial radiograph reporting As axial trauma radiographs can be a difficult to review the book starts with several chapters to

introduce or revise specific axial trauma The first chapter discusses mechanisms of injury of major trauma Followed by a chapter on pelvic trauma The next chapter looks at reviewing trauma cervical spine radiographs Then is presented a series of trauma cases of the axial skeleton on which you are asked to write reports plus sometimes answer a few questions the answers are over the page This section is divided into six chapters trauma cases of the pelvis of the hip and femur the cervical spine dorsal and lumbar spine the skull facial bones and mandible 15 cases in each chapter the last chapter being 25 mixed cases Although it is preferably to work your way through the book from start to finish if you feel you need revision on say cervical spine radiographs then you can flick to the chapter on reviewing the cervical spine and next to the cases on cervical spine Each case has appropriate clinical history although this may not be the original history in order to anonymous the case Some of the cases may not have side markers these may have been removed whilst removing patients OCO details

Accidental Injury Alan M. Nahum, John W. Melvin, 2013-03-09 Writing on accidental injury often seems to occur from one of two perspectives. One perspective is that of those involved in aspects of injury diagnosis and treatment and the other is that of those in the engineering and biologic sciences who discuss mechanical principles and simulations. From our point of view, significant information problems exist at the interface. Persons in the business of diagnosis and treatment do not know how to access, use, and evaluate theoretical information that does not have obvious practical applications; persons on the theoretical side do not have enough real-life field data with which to identify problems or to evaluate solutions. The ideal system provides a constant two-way flow of data that permits continuous problem identification and course correction. This book attempts to provide a state-of-the-art look at the applied biomechanics of accidental injury causation and prevention. The authors are recognized authorities in their specialized fields. It is hoped that this book will stimulate more applied research in the field of accidental injury causation and prevention. Alan M. Nahum, John W.
