Carpenter, 2003 Containing 202 hand drawn color maps of every railroad line in Pennsylvania New Jersey Delaware Maryland Virginia West Virginia and the District of Columbia this book provides a unique record of a time when passenger trains still made stops in every town and freight trains carried the bulk of the nation's cargo Drawn at a scale of 1 inch to 4 miles the maps include main and branch passenger and freight lines former steam locomotive and manual signal tower stations towns that functioned as crew change points track pans coaling stations and a variety of indexes of railroad features Carpenter is a longtime observer and collector of railroad history This is the first volume in a series that eventually will provide the first comprehensive atlas of the U S post World War II railroad system Annotation c 2003 Book News Inc Portland OR booknews com **Historical Atlas of Canada: The land transformed, 1800-1891** Geoffrey J. Neu, 1956 Rapid population growth in the Great Plains and the American West after the Civil War was the result not only of railroad expansion but of a collaboration among competing railroads to adopt a uniform width for track This title shows how the consolidation of smaller railroads and the growth of capitalism worked to unify the railroad industry *The Universal Atlas, Including County and Railroad Maps of the United States*, 1894 *Catalogue of the Library of the Parliament of Ontario* Ontario. Representing the Republic John R. Short, 2001 Representing the Republic provides an intriguing account of the mapping of America from its colonial origins to 1900 The most significant maps and mapmakers are discussed in a survey that begins with the first European mappings of New Netherlands in the early seventeenth century and concludes with the Rand McNally atlases of the 1890s Maps tell us a great deal about the transformation of America's national identity Having undertaken extensive research in map collections including work with rare archival materials prominent geographer John Rennie Short provides an account of how maps have both embodied and reflected power conflict and territorial expansion over time opening a new perspective on North American history and geography **Cartographies of Travel and Navigation** James R. Akerman, 2010-11-15 Finding one's way with a map is a relatively recent phenomenon In premodern times maps were used if at all mainly for planning journeys in advance not for guiding travelers on the road With the exception of navigational sea charts the use of maps by travelers only became common in the modern era indeed in the last two hundred years maps have become the most ubiquitous and familiar genre of modern cartography Examining the historical relationship between travelers navigation and maps Cartographies of Travel and Navigation considers the

cartographic response to the new modalities of modern travel brought about by technological and institutional developments in the twentieth century Highlighting the ways in which the travelers operators and planners of modern transportation systems value maps as both navigation tools and as representatives of a radical new mobility this collection brings the cartography of travel by road sea rail and air to the forefront placing maps at the center of the history of travel and movement Richly and colorfully illustrated Cartographies of Travel and Navigation ably fills the void in historical literature on transportation mapping
