Transport Terminals and Modal Interchanges Christopher Blow, 2012-05-23 This is the first book to review a trend in transport systems which has only recently come of age the multi modal interchange Separate modes of transport are being linked through joined up thinking and transport designers and authorities are only now able to exploit interchange opportunities This book presents examples of how these new opportunities have been planned and designed and outlines how transfer and mobility can be improved in the future Blow takes the airport as the focal point of true multi modal passenger terminals and presents the development of these buildings as representing a new experience in travel The book shows that the success of the experience of transferring from one mode of transport to another depends on the many factors including congestion in an already overloaded system and the way that designers and managers have addressed contingency planning International examples are drawn from areas where mobility is most concentrated and the demands on design are at their highest The book also addresses important issues of rebuilding and redevelopment where once separate modes of transport are being linked to each other and where short term inconveniences rectify past wrongs in the long term It is a compendium of architectural and engineering achievement

Railways, Urban Development and Town Planning in Britain: 1948-2008 Russell Haywood, 2016-03-23 This book provides a critical overview of the relationships between planning and railway management and development during the key period in the 20th Century when the railway was in public ownership 1948-94 It assesses the strength of the relationships when working in collaboration with the private sector The book then focuses on the interplay between planning and railway since privatization in 1994 and points to best practice for the future in institutional structures and policy development to secure improved outcomes

Spatial Implications and Planning Criteria for High-Speed Rail Cities and Regions José Maria de Ureña, Chia-Lin Chen, Anastasia Loukaitou-Sideris, Roger Vickerman, 2021-03-29 Spatial Implications and Planning Criteria for High speed Rail Cities and Regions evaluates the varied experiences that HSR systems have brought about to different station cities and their regional territories around the world with an eye towards better future planning and policy of such systems This edited volume draws from examples of high speed rail operations in different cities in Europe and Asia to depict the various impacts of this major transportation infrastructure It attempts to distinguish the short and long term impacts described in the literature classifying them into regional and inter urban effects urban effects and wider economic impacts Planning challenges appear at two major points 1 during the initial planning stage that includes the route and location of stations and 2 during the development process that follows The case studies in the book concentrate on a variety of topics from the impact of high speed rail on population growth in some station cities to the regional economic impacts that an HSR system can bring about to the larger territories it passes through to the

potential of station cities to better attract firms or to experience increases in tourism and commerce They also assess planning strategies and experiences from station cities to draw lessons for future HSR planning policies The Chapters in this book were originally published in a special issue of European Planning Studies

New Architecture and Technology Gyula Sebestyen, Christopher Pollington, 2007-06-07 Many books have covered the topics of architecture materials and technology New Architecture and Technology is the first to explore the interrelation between these three subjects It illustrates the impact of modern technology and materials on architecture The book explores the technical progress of building showing how developments both past and present are influenced by design methods It provides a survey of contemporary architecture as affected by construction technology It also explores aspects of building technology within the context of general industrial social and economic developments The reader will acquire a vocabulary covering the entire range of structure types and learn a new approach to understanding the development of design

Sustainability and the Design of Transport Interchanges Brian Edwards, 2011-01-24 The interchange is a new form of transport building which integrates into a single whole various modes of public transport putting the passenger first rather than the infrastructure This book presents design principles for transport interchanges and offers analysis of best practice in the UK and abroad The author demonstrates how this complex new building type integrates with the city on the one hand and with different types of transport on the other In this integration design in both plan and section are important as is urban and landscape design The idea of interchange is increasingly relevant as town planners engineers and architects address the question of sustainable development with its emphasis on energy efficiency social cohesion access for the elderly and urban regeneration

Improving Interchanges Asian Development Bank, 2015-01-01 The interchange hub is the gateway to the city and is a critical element in developing a sustainable and efficient public transport system This publication presents ideas for improving interchanges by enhancing the quality of the journey experience for passengers It draws upon international best practice and explains how ease and speed of mode transfers coupled with the availability of amenities and user facilities can make a journey more enjoyable The lessons and innovations presented here may be used for designing the next generation of interchange hubs in the People's Republic of China

Improving Energy Efficiency and Reducing Emissions through Intelligent Railway

Station Buildings Asian Development Bank, 2015-09-01 Buildings in the People's Republic of China PRC consume 21% of the total energy produced in the country This study analyzes and proposes feasible energy saving and emission reducing solutions for domestic railway stations in the PRC The use of intelligent building controls support reduction of energy consumption minimization or elimination of energy wastes and cost savings Strong institutional mechanisms and railway building management methods and policies also promote technological innovation Moreover these are necessary to balance the interests of multiple parties to be able to achieve energy efficiency in railway station buildings in the PRC

Transporting Moments: Mobility, Australian Railways and the Trained Society Colin Symes, 2015-04-06 Sociologists have suggested that being on the move entails a complex choreography comprised of passenger comportment signage announcements and posters Employing insights from mobility theory Transporting moments provides an account of railway culture from a passenger's perspective The book uses the context of commuting in Sydney at a time when elements of its intra urban rail network were being upgraded as its principal case study This upgrade covers its rolling stock infrastructure and linguistic landscape It is argued that understanding the rationale behind these changes requires an understanding of the historical and policy context in which the railways of Sydney's New South Wales and Australia are embedded This is also the case with the nation's long distance trains whose operators have fought hard to stave off competition from airliners and cars Transporting moments therefore presents strong case for preserving public transport as a more equitable and sustainable form of mobility Governments Australian or otherwise can use these insights for productive

investment in their rail networks and public transportation service in general and for reducing the nation's addiction to the automobile. With its invaluable insights into travelling on trains, *Transporting Moments* is a fascinating addition to the growing corpus of literature on day-to-day mobility. Education and the Mobility Turn Kalervo N. Gulson, Colin Symes, 2018-12-18. The mobile turn in human geography, sociology, and cultural studies has resulted in a hitherto unparalleled focus on the critical role that mobility plays in conserving and regenerating society and culture. In this instance, mobility refers not just to the physical movement of goods and people's ideas and symbols; it can also be analytically applied to the technologies used to facilitate their movement. One such technology is education, which has yet to fall under the purview of the mobility lens. Something that this collection endeavours to redress. Its contributing authors, drawn from Canada, Australia, the United States, and the United Kingdom, explore salient issues relating to education and mobility. These include studies of the career implications for academics of moving across borders, the impact of university study on prison populations, policy mobility, and the charter school movement. Affect theory and policy development in Canada, educational advertising on Sydney trains and stations, and the employment of mobile approaches to track policy development and implementation. One notable feature of the mobility turn is the willingness of its adoptees to explore innovative research methods. Various demonstrations of the efficacy and cogency of autoethnography, affect theory, textual ethnography, and human geography for a mobility-empowered education analytics. This collection is no exception. This book was originally published as a special issue of *Critical Studies in Education*. **Blueprint**, 2001. *Rail Infrastructure Resilience* Rui Calçada, Sakdirat Kaewunruen, 2022-06-28. Economic growth, security, and sustainability across Europe are at risk due to ageing railway infrastructure systems. At present, the majority of such systems are aging, and some have even reached their initial design lives. These issues align with a major challenge in civil engineering: how to restore and improve urban infrastructure and built environments. Policy, environmental, and physical barriers must be addressed and overcome. The complex and interconnected nature of the problem means that there is a need for academia, industry, communities, and governments to work collaboratively. The challenges posed by extreme events from natural and man-made disasters are urgent. *Rail Infrastructure Resilience: A Best Practices Handbook* presents developed improvement methods for rail infrastructure systems toward resilience to extreme conditions. It shows how best to use new information in the engineering design, maintenance, construction, and renewal of rail infrastructure resilience through knowledge exchange and capability development. The book presents the outcome of a major European research project known as the RISEN project. RISEN aimed to enhance knowledge creation and transfer using both international and intersectoral secondment mechanisms among European Advanced Rail Research Universities and SMEs and Non-EU leading rail universities, providing methodological approaches and practical tools for restoring and improving railway infrastructure systems for extreme events. Edited and written by members of this project, this book will be essential reading for researchers and practitioners hoping to find practical solutions to the

challenges of rail infrastructure resilience Offers a best practices handbook for rail infrastructure resilience from the leaders in the field Paints a holistic picture of the rail transport system showing that infrastructure maintenance intervention can be enhanced through advanced monitoring systems and resilience design Presents rail infrastructure resilience and advanced condition monitoring allowing a better understanding of the critical maintenance renewal and retrofit needs of railways Considers how academia industry communities and governments can work collaboratively in order to tackle aggregated problems in rail infrastructure resilience Presents the findings from the RISEN project the leading European project on enhancing knowledge creation and transfer of expertise on rail infrastructure resilience **Transit-friendly Streets**

Project for Public Spaces,National Research Council (U.S.).
