Encyclopedia of Literature and Science Pamela Gossin, 2002-08-30 Science and literature have always been strange bedfellows Like puzzle pieces they fit because they re different Some of the greatest works of world literature have been inspired by the marvels of the scientific world Scientists have written works of the imagination Even formal scientific writings have been known to employ rhetoric There is a tendency to think of literature and the humanities in general as having little to do with science Yet scholars have conducted fruitful studies of the history and philosophy of science With the rise of technology scholars have also applied scientific analysis to the study of literature and the creative process The intersection of scientific and humanistic inquiry is finally being mapped This volume includes more than 650 A Z entries on topics and themes in science and literature significant writers key scientists seminal works and important theories and methodologies This reference defines the rapidly emerging interdisciplinary field of literature and science An introductory essay traces the history of the field its growing reputation and the current state of research Broad in scope the volume covers world literature from its beginnings to the present day and illuminates the role of science in literature and literary studies A wide range of experts contributed entries to this volume each of which concludes with a brief

bibliography The entire volume closes with a list of works for further reading *Readings and Review for Society Today, Third Edition* Michael S. Bassis, 1978 **Ibss: Anthropology: 1975** International Committee for Social Scien, 1978-08-24 First published in 1978 Routledge is an imprint of Taylor Francis an informa company **Information Theory And Evolution (Third Edition)** John Scales Avery, 2021-11-24 This highly interdisciplinary book discusses the phenomenon of life including its origin and evolution against the background of thermodynamics statistical mechanics and information theory Among the central themes is the seeming contradiction between the second law of thermodynamics and the high degree of order and complexity produced by living systems As the author shows this paradox has its resolution in the information content of the Gibbs free energy that enters the biosphere from outside sources Another focus of the book is the role of information in human cultural evolution which is also discussed with the origin of human linguistic abilities One of the final chapters addresses the merging of information technology and biotechnology into a new discipline bioinformation technology This third edition has been updated to reflect the latest scientific and technological advances Professor Avery makes use of the perspectives of famous scholars such as Professor Noam Chomsky and Nobel Laureates John O Keefe May Britt Moser and Edward Moser to cast light on the evolution of human languages The mechanism of cell differentiation and the rapid acceleration of information technology in the 21st century are also discussed With various research disciplines becoming increasingly interrelated today Information Theory and Evolution provides nuance to the conversation between bioinformatics information technology and pertinent social political issues This book is a welcome voice in working on the future challenges that humanity will face as a result of scientific and technological progress Readings on the Development of Children Mary Gauvain, Michael Cole, 2005 Streamlined and thoroughly updated this carefully selected collection of classic and contemporary articles is ideal for use as a supplement in undergraduate developmental psychology courses The collection features 37 primary sourced articles 21 of them new to the fourth edition Written by respected scholars in the field they constitute a representative survey of the prominent issues in the study of child development today Each reading is preceded by a headnote that provides a context for understanding and is followed by new discussion questions that encourage students to think more broadly about key concepts **BOOK JACKET** A Guide to Readings in Civic Education Olive Thompson, 1922 *Essential Readings in Biosemiotics* Donald Favareau, 2010-06-10 Synthesizing the findings from a wide range of disciplines from biology and anthropology to philosophy and linguistics the emerging field of Biosemiotics explores the highly complex phenomenon of sign processing in living systems Seeking to advance a naturalistic understanding of the evolution and development of sign dependent life processes contemporary biosemiotic theory offers important new conceptual tools for the scientific understanding of mind and meaning for the development of artificial intelligence and for the ongoing research into the rich diversity of non verbal human animal and biological communication processes Donald Favareau s *Essential Readings in Biosemiotics* has been designed as a single source overview of the major

works informing this new interdisciplinary and provides scholarly historical and analytical commentary on each of the texts presented The first of its kind this book constitutes a valuable resource to both bioscientists and to semioticians interested in this emerging new discipline and can function as a primary textbook for students in biosemiotics as well Moreover because of its inherently interdisciplinary nature and its focus on the big questions of cognition meaning and evolutionary biology this volume should be of interest to anyone working in the fields of cognitive science theoretical biology philosophy of mind evolutionary psychology communication studies or the history and philosophy of science

Wallesch,2013-01-11 From a contemporary perspective Classic Cases in Neuropsychology Volume II reviews important and significant cases described in historical and modern literature where brain damage has been sustained The single case study has always been of central importance to the discipline of neuropsychology Cognitive neuropsychology and cognitive neurolinguistics search for universal structures in thought processes and single patients are an important means to that end The role of the single case study in the historical development of the field and its increasing contribution to contemporary work is therefore recognised as crucial This follow up to the successful Classic Cases in Neuropsychology 1996 brings together more of the important case investigations which have shaped the way we think about the relationships between brain behaviour and cognition The book includes cases from the rich history of neuropsychology as well as important contemporary case studies in the fields of memory language and perception Some of the cases described are rare some are seminal in the field many were the first of their type to be described and gave rise to new theories and some are still controversial As in the first volume each chapter highlights the relevance of the case to the development of neuropsychology and discusses the theoretical implication of the findings Classic Cases in Neuropsychology Volume II will be essential reading for students and researchers alike in the fields of neuropsychology and neuroscience It will also be of interest to speech and language pathologists therapists and clinicians in this area
