Twenty Five Astronomical Observations That Changed the World takes twenty five journeys through space back in time and into human history We begin with the simplest sight of the Tycho Crater on the Moon through a repeat of Galileo s observations of Jupiter s moons and then move out towards the nebulae stars and galaxies The astronomical observations repeat the original groundbreaking discoveries that have changed our understanding of science and ourselves This title contains graded observing challenges from the straightforward to the more difficult in chapter order It offers clear observing tips and lots of practical help presuming no prior in depth knowledge of equipment Binoculars and or a small astronomical telescope are all that is required for most of the observations Secondly it explores for each observation the science of what is seen adding to the knowledge and enjoyment of amateur astronomers and offering lots of reading for the cloudy nights when there is not a star in view Thirdly the book puts the amateur astronomers observations into a wider perspective **Twenty Five Astronomical Observations That Changed the World** makes the observer part of that great story of discovery Each chapter each observing challenge shows how to observe and then how to look with understanding The projects begin with practicalities where the object is how best is it observed and with what appropriate equipment usually a small to medium aperture amateur telescope binoculars even the naked eye **Twenty Five Astronomical Observations that Changed the World** guides even the inexperienced amateur astronomer beginners can use the book around a variety of night sky objects and reminds the more experienced how they can best be seen These practical observations put us in contact with all the history and culture surrounding them through scientific speculation and literature to those first fuzzy images made in 1959 by the Russian space probe Luna 3

How to Do Things with Fictions Joshua Landy, 2012-07-06 Why does Mark's Jesus speak in parables Why does Plato's Socrates make bad arguments Why are Beckett's novels so inscrutable And why don't stage magicians even pretend to summon spirits anymore In a series of captivating chapters on Mark Plato Beckett Mallarm and Chaucer Joshua Landy not only answers these questions but explains why they are worth asking in the first place Witty and approachable *How to Do Things with Fictions* challenges the widespread assumption that literary texts must be informative or morally improving in order to be of any real benefit It reveals that authors are sometimes best thought of not as entertainers or as educators but as personal trainers of the brain putting their willing readers through exercises designed to fortify specific mental capacities from form giving to equanimity from reason to faith Delivering plenty of surprises along the way that moral readings of literature can be positively dangerous that the parables were deliberately designed to be misunderstood that Plato knowingly sets his main character up for a fall that metaphor is powerfully connected to religious faith that we can sustain our beliefs even when we suspect them to be illusions *How to Do Things with Fictions* convincingly shows that our best allies in the struggle for more rigorous thinking deeper faith richer experience and greater peace of mind may well be the imaginative writings sitting on our shelves

Science Fiction: A Critical Guide Patrick Parrinder, 2021-05-18 This book first published in 1979 presents a portrait of science fiction as a distinct form of serious and creative literature Contributors are drawn from Britain America and Europe and range from well known academic critics to young novelists The essays establish the common properties of science fiction writing and assess the history and significance of a field in which critical judgements have often been unreliable The material ranges from the earliest imaginative journeys to the moon to later developments of British American and European science fiction

Time Travel David Wittenberg, 2016-01-01 This stimulating contribution to literary theory reveals the deeply philosophical concerns and developments behind popular time travel sci fi London Review of Books In *Time Travel* literary theorist David Wittenberg argues that time travel fiction is not mere escapism but a narrative laboratory where theoretical questions about

storytelling and by extension about the philosophy of temporality history and subjectivity are presented in story form Drawing on physics philosophy narrative theory psychoanalysis and film theory Wittenberg links innovations in time travel fiction to specific shifts in the popularization of science from nineteenth century evolutionary biology to twentieth century quantum physics and more recent multiverse cosmologies Wittenberg shows how popular awareness of new science led to surprising innovations in the literary time machine which evolved from a vehicle used for sociopolitical commentary into a psychological device capable of exploring the temporal structure and significance of subjects viewpoints and historical events Time Travel draws on classic works of science fiction by H G Wells Edward Bellamy Robert Heinlein Samuel Delany and Harlan Ellison television shows such as The Twilight Zone and Star Trek and other popular entertainments These are read alongside theoretical work ranging from Einstein Schrödinger Stephen Hawking to Gerard Genette David Lewis and Gilles Deleuze Wittenberg argues that even the most mainstream audiences of popular time travel fiction and cinema are vigorously engaged with many of the same questions about temporality identity and history that concern literary theorists media and film scholars and philosophers
