Zadeh, 2013-03-09 These two volumes consisting of Foundations and Applications provide the current status of theoretical and empirical developments in computing with words In philosophy the twentieth century is said to be the century of language This is mainly due to Wittgenstein who said The meaning of a word is its use in the language game The concept game is a concept with blurred edges In the first phrase the language game implies the everyday human activity with language and in the latter game simply implies an ordinary word Thus Wittgenstein precisely stated that a word is fuzzy in real life Unfortunately this idea about a word was not accepted in the conventional science We had to wait for Zadeh's fuzzy sets theory Remembering Wittgenstein's statement we should consider on the one hand the concept of computing with words from a philosophical point of view It deeply relates to the everyday use of a word in which the meaning of a word is fuzzy in its nature *Lexical Semantic Gene Structure of Modern Chinese* Dan Hu, 2025-07-26 This book draws on genetic theory to explore the microstructure of lexical meaning the operating mechanism of the lexical semantic system and its formal representation and methods for large scale lexical computing resource construction At the theoretical level the basic framework of lexical semantic gene theory is proposed and elaborated In this context a lexical semantic gene is a basic structural unit of lexical meaning that controls a semantic feature of a word and can be inherited and recombined to construct a new word Lexical meaning has multiple dimensions and each dimension is regarded as a semantic feature composed of several lexical semantic genes according to certain semantic relations The generation of new words is the result of the inheritance reorganization and mutation of lexical semantic genes Drawing on this basis the book subsequently explores the techniques of lexical semantic gene extraction and formalized description of lexical semantic genetic structure at the level of engineering technology Bearing in mind the dual needs of formalized representation of semantic computation on the one hand and traditional language teaching research and lexicography on the other the book employs language fact analysis to define strategies methods and operational procedures for a lexical semantic gene depiction meta language system lexical semantic genetic structure analysis and lexical semantic gene extraction At the application level the computational and traditional applications of the lexical semantic gene database are discussed
