From the origins of animals to the evolution of rap music, from ancient mass extinctions to the current biodiversity crisis, and from the Snowball Earth to present-day climate change, this book covers it with an eye towards showing how past life on Earth puts the modern world into its proper context. The history of life and the patterns and processes of evolution are especially emphasized, as are the interconnections between our planet, its climate system, and its varied life forms. The book does not just describe the history of life but uses actual examples from life's history to illustrate important concepts and theories. **Tracing the History of Eukaryotic Cells** Betsey Dexter Dyer, 1994 This study draws evidence from the fossil record and from molecular biology to develop and support the theory that complex cells are symbiotic unions of bacterial cells. *Life (Loose Leaf)* David E.
