Reproductive Behaviour Of Insects:

Reproductive Behaviour of Insects W. Bailey, T.J. Ridsdill-Smith, 1991-02-28 *The Evolution of Insect Mating Systems* David Shuker, Leigh Simmons, 2014-07-31 Insects display a staggering diversity of mating and social behaviours. Studying these systems provides insights into a wide range of evolutionary and behavioural questions such as the evolution of sex, sexual selection, sexual conflict and parental care. This edited volume provides an authoritative update of the landmark book in the field *The Evolution of Insect Mating Systems* Thornhill and Alcock 1983 which had such a huge impact in shaping adaptationist approaches to the study of animal behaviour and influencing the study of the evolution of reproductive behaviour far beyond the taxonomic remit of insects. This accessible new volume brings the empirical and conceptual scope of the original book fully up to date incorporating the wealth of new knowledge and research of the last 30 years. It explores the evolution of complex forms of sex determination in insects and the role of sexual selection in shaping the evolution of mating systems. Selection arising via male contest competition and female choice both before and after copulation are discussed as are the roles of parasites and pathogens in mediating the strength of sexual selection and the role that parental care plays in successful reproduction. *The Evolution of Insect Mating Systems* is suitable for both graduate students and researchers interested in insect mating systems or behaviour from an evolutionary, genetical, physiological or ecological perspective. Due to its interdisciplinary and concept driven approach it will also be of relevance and use to a broad audience of evolutionary biologists.

Experimental Analysis of Insect Behaviour L.B. Browne, 2012-12-06 This volume has come about as a direct result of a Symposium entitled *Experimental Analysis of Insect Behaviour* which was an important contribution to the 14th International Congress of Entomology held in Canberra, Australia in August 1972 under the joint sponsorship of the Australian Academy of Science and the Australian Entomological Society. It is not however strictly Symposium proceedings. I have included in this volume contributions from several workers who had to withdraw from the Symposium at a fairly late stage. Furthermore quite intentionally a number of the contributions bear only a general relationship to the papers given at the Congress. To permit this the deadline for contributions was set at some six months after the Symposium. I imposed no restrictions on the form of the contributions. I did however indicate that speculative reviews highlighting the author's own recent research or that of his immediate colleagues would be particularly acceptable and a number of the contributors have taken the opportunity to write this kind of paper. Several contributors notably those whose task it was to give more general papers in the Symposium itself have written reviews of somewhat greater scope.

Reproductive Strategies in Insects Omkar, Geetanjali Mishra, 2022-02-15 Reproduction is one of the most inherent tasks that all living organisms are actively involved in. It forms the backbone of their existence with all evolutionary energies directed over billion years of creation into maximizing reproductive effort. For so simple and directed a need such as maximizing reproduction it is interesting to see how much diversity and complexity exists in this task. Each organism despite having the same end goal employs different

strategies The complexities intricacies and strategies of successful reproduction while being extremely fascinating are equally baffling Reproductive Strategies in Insects provides an expansive critical look at the reproductive strategies of the most diverse group of animals the insects Insects which inhabit myriad niches in all ecosystems except the oceans show the most diverse reproductive strategies ranging from simplest to most complex Reproductive strategies viz search for mates number of mates display of mate quality assessment of mate quality acceptance of mate rejection of mates forced copulations the fight for paternity pre during and post copula the modulation of paternity ovipositional strategies and parental care are described in detail in this book Also each strategy is analyzed in relation to its morphological physiological ethological ecological and evolutionary aspects Features Covers a wide variety of reproductive strategies A detailed step by step description of reproductive strategies Discusses morphological physiological ethological ecological and evolutionary aspects Modulation of these strategies and responsible modulatory factors are also discussed Well illustrated Recent research results and probable future research directions This is a niche reference book for ethologists biologists studying behavioural evolution and entomologists It may also be used as a textbook for a graduate level course in behaviour

The Evolution of Social Behavior in Insects and Arachnids Jae C. Choe, Bernard J. Crespi, 1997 Social insects and arachnids exhibit complex forms of behavior that involve cooperation in building a nest defending against attackers or rearing offspring This book is a comprehensive up to date guide to sociality and its evolution in a wide range of taxa

Sexual Selection and Reproductive Competition in Insects Murray Blum, 2012-12-02 Sexual Selection and Reproductive Competition in Insects explores the biological mechanisms underlying intrasexual reproductive competition as a driving force in sexual selection in insects The book contains papers presented at a symposium on reproductive behavior in insects held at the 15th International Congress of Entomology in Washington D C in 1976 Organized into 13 chapters this volume begins with a historical background on sexual selection theory and some of the principal conceptual advances that have been made since Charles Darwin 1871 posited that a sexual character was a characteristic possessed by only one sex and not the other It then introduces the reader to differences in patterns of sexual selection and how they affect the reproductive success of individuals male female mating relationships and mate choice by females The book also discusses the evolution of mating strategies in insects touching on concepts such as parental investment female choice and sexual conflict Later chapters focus on winglessness fighting and dimorphism in male fig wasps and other insects along with agonistic behavior among males of *Achias australis* the function of horns in beetles and the evolution of alternative male reproductive strategies in field crickets The book also looks into the courtship and mating behavior of insects and then concludes with an analysis of insect life histories in order to elucidate the biological aspects of the male female phenomenon This book is an essential reading for biologists and chemists

The Evolution of Insect Mating Systems David Shuker, Leigh Simmons, 2014-07-31 Insects display a staggering diversity of mating and social behaviours Studying these systems provides insights into a wide range of

evolutionary and behavioural questions such as the evolution of sex sexual selection sexual conflict and parental care This edited volume provides an authoritative update of the landmark book in the field *The Evolution of Insect Mating Systems* Thornhill and Alcock 1983 which had such a huge impact in shaping adaptationist approaches to the study of animal behaviour and influencing the study of the evolution of reproductive behaviour far beyond the taxonomic remit of insects This accessible new volume brings the empirical and conceptual scope of the original book fully up to date incorporating the wealth of new knowledge and research of the last 30 years It explores the evolution of complex forms of sex determination in insects and the role of sexual selection in shaping the evolution of mating systems Selection arising via male contest competition and female choice both before and after copulation are discussed as are the roles of parasites and pathogens in mediating the strength of sexual selection and the role that parental care plays in successful reproduction *The Evolution of Insect Mating Systems* is suitable for both graduate students and researchers interested in insect mating systems or behaviour from an evolutionary genetical physiological or ecological perspective Due to its interdisciplinary and concept driven approach it will also be of relevance and use to a broad audience of evolutionary biologists

Acoustic Behaviour of Insects W. Bailey, 1991 This book considers research on insect acoustic behaviour from two divergent approaches to insect behaviour The first approach involves the current rediscovery of sexual selection and involves the testing of many hypotheses concerning the relative importance of different behavioural strategies to the fitness of the individual The other approach considers the role of specific neurones within the insect s auditory system This book aims to integrate these aspects of evolutionary biology and neurophysiology

Insect Behavior Alex Córdoba-Aguilar, Daniel González-Tokman, Isaac González-Santoyo, 2018-07-19 Insects display a staggering diversity of behaviors Studying these systems provides insights into a wide range of ecological evolutionary and behavioral questions including the genetics of behavior phenotypic plasticity chemical communication and the evolution of life history traits This accessible text offers a new approach that provides the reader with the necessary theoretical and conceptual foundations at different hierarchical levels to understand insect behavior The book is divided into three main sections mechanisms ecological and evolutionary consequences and applied issues The final section places the preceding chapters within a framework of current threats to human survival climate change disease and food security before providing suggestions and insights as to how we can utilize an understanding of insect behavior to control and or ameliorate them Each chapter provides a concise authoritative review of the conceptual theoretical and methodological foundations of each topic

Genomics, Physiology and Behaviour of Social Insects, 2015-03-26 *Physiology Behavior Genomics of Social Insects* provides comprehensive information on the social insect groups described including new and unique reviews on emerging model social organisms The book s interdisciplinary approach integrates behavior genomics and physiology providing readers with great insights into the present state of a rapidly expanding area of research It also discusses areas where new research tools will bring hope to longstanding problems

Provides the latest research on the genomics behavior and physiology of social insects Presents diverse and authoritative syntheses on the relationship between genomics physiology and the fascinating behavior of social insects Takes an in depth look of the current state of social insect research and its future path *Insect Defenses* David L. Evans,Justin O. Schmidt,1990-01-01 This work takes a fresh modern approach to investigate and explain the predator and prey relationships of insects and spiders the major terrestrial fauna on earth Devoted to broad and in depth analysis of arthropod defenses against predators the book s approach is both experimentally and theoretically based with major emphasis on evolution predator strategies and tactics and prey defensive adaptations and behaviors The authors explain such topics as cryptic and aposematic coloration the conflict between sexual and survival needs web spider prey choice and evolution of prey counter defenses predator prey interactions and the origins of intelligence bird predatory tactics and caterpillar defense strategies Also examined is the use of timing for fitness and survival evolutionary gamesmanship in the predatory bat moth relationship colony defense by aper wasps startle as a defense by moths aggregation as a defense chemicals as defenses plant chemicals as defenses and venoms as defenses The authors illustrate each topic with numerous specific well documented examples presented in a clear readable style **Courtship and Mate-finding in Insects** Raymond J.C. Cannon,2023-06-30 This book explores mate finding and courtship behaviour in the insect world in all its subtlety and diversity Insects engage in courtship as much or as little as any other animal they have songs and dances and all manner of instruments and ornaments to attract and court the opposite sex Insects have evolved complex chemical and acoustic communication systems sending fragrant messages visual signals and subtle vibrations to attract and persuade Insects also have many different ways and means of choosing or rejecting mating partners This beautifully illustrated book shows the incredible variety of courtship behaviours and celebrates the wonderful natural history of a wide range of insects Varieties of courtship can occur before during and even after copulation and numerous examples of the different mating strategies used are presented This landmark volume will be of interest to students of biology entomologists naturalists and anyone with a desire to know more about the love lives of the small creatures with which we share the planet *Insect Reproduction* S. Hardy, Eric Wajnberg, 2023-11-09

There has been a dramatic increase in theoretical and practical studies on insect natural enemies over the last decades The appeal of insect predators and in particular parasitoids as research animals derives from the relative ease with which many species may be cultured and experimented on in the laboratory the simple life cycles of most parasitoid species and the increasing demand for biological pest control as a key component of the integrated pest management approach There is now a very substantial literature on insect natural enemies and thus a great need for a general text that enquiring students or research workers can use in deciding on approaches and techniques that are appropriate to the study and evaluation of such insects This book fulfils that demand It is a considerably updated and expanded version of a previous best seller and provides an account of major aspects of the biology of predators and parasitoids punctuated with information and advice on which experiments or observations to conduct and importantly how to carry them out Guidance is provided where necessary on the most recent further literature that may need to be consulted on given topics While researchers can now refer to several books on parasitoids and predators Jervis s Insects as Natural Enemies is unique in emphasising practicalities It is aimed at students and professionals working in universities and both government and commercial institutes in the fields of integrated pest management agriculture horticulture and forestry as well as those interested in fundamentals of behavioural population community and evolutionary ecology
