Reproductive Biology Of The Chelonia:

The Reproductive Biology of the Chelonia Gerald Kuchling, 2012-12-06 This book presents a comparative view of chelonian reproduction and discusses ecophysiological implications for their captive breeding Chelonians with their protective rigid armour are a phylogenetically antique group of reptiles which radiated to occupy niches from the open waters of the oceans to rivers creeks swamps forests savannahs and deserts A few North American turtle species have been well studied but until recently reproductive data on other chelonian species have been scarce The way in which chelonians adjust their conservative mode of reproduction to the various requirements of their habitats and life styles is the theme of this book the physiology of reproduction and its interplay with ecological conditions are its central subjects

Reproductive Biology of Captive Green Sea Turtle Chelonia Mydas James R. Wood, 1980 A captive colony of green sea turtles *Chelonia mydas* has been maintained and observed at a commercial sea turtle farm on Grand Cayman Island B W I since 1973 Observations of this breeding colony show that the mating and nesting behaviour of the captive green sea turtle is similar to that observed in wild populations Evidence indicates that mating observed prior to a female's nesting in a given season determines the hatchability of that season's egg production Annual per female egg production of the captive colony appears to be two to five times greater than that reported for wild colonies Observations on the reproductive biology of green sea turtles hatched and raised under farm conditions suggests that the minimum age of sexual maturity is eight to nine years of age The number of eggs per nest the number of nests per season per female and hatch rate tend to increase with successive seasons nesting for these turtles reaching sexual maturity *Hormones and Reproduction of Vertebrates, Volume 3* David O.
