Reproductive Ecology and Human Evolution Peter T. Ellison, 2017-09-04 The study of human reproductive ecology represents an important new development in human evolutionary biology Its focus is on the physiology of human reproduction and evidence of adaptation and hence the action of natural selection in that domain But at the same time the study of human reproductive ecology provides an important perspective on the historical process of human evolution a lens through which we may view the forces that have shaped us as a species In the end all actions of natural selection can be reduced to variation in the reproductive success of individuals Peter Ellison is one of the pioneers in the fast growing area of reproductive ecology He has collected for this volume the research of thirty one of the most active and influential scientists in the field Thanks to recent noninvasive techniques these contributors can present direct empirical data on the effect of a broad array of ecological behavioral and constitutional variables on the reproductive processes of humans as well as wild primates Because biological evolution is cumulative however organisms in the present must be viewed as products of the selective forces of past environments The study of adaptation thus often involves inferences about formative ecological relationships that may no longer exist or not in the same form Making such inferences depends on carefully weighing a broad range of evidence drawn from studies of contemporary ecological variation comparative studies of related taxonomies and paleontological and genetic evidence of evolutionary history The result of this inquiry sheds light not only on the functional aspects of an organism s contemporary biology but also on its evolutionary history and the selective forces that have shaped it through time Encompassing a range of viewpoints controversy along with consensus this far ranging collection offers an indispensable guide for courses in biological anthropology human biology and primatology along with

contemporary ecological variation comparative studies of related taxonomies and paleontological and genetic evidence of evolutionary history The result of this inquiry sheds light not only on the functional aspects of an organism s contemporary biology but also on its evolutionary history and the selective forces that have shaped it through time Encompassing a range of viewpoints controversy along with consensus this far ranging collection offers an indispensable guide for courses in biological anthropology human biology and primatology along with Provided by publisher

Reproduction and Adaptation C. G. N. Mascie-Taylor,Lyliane Rosetta,2014-05-14 Examination of human reproductive ecology focussing on environmental demographic health and family planning issues [The Evolutionary Biology of Human Female Sexuality](#) Randy Thornhill,Steven W. Gangestad,2008 This title introduces a theoretical framework for understanding women s sexuality based on comparative female sexuality across all vertebrate animals It shows that estrus is present in human females contrary to earlier research

Basics in Human Evolution Michael P Muehlenbein,2015-07-24 Basics in Human Evolution offers a broad view of evolutionary biology and medicine The book is written for a non expert audience providing accessible and convenient content that will appeal to numerous readers across the interdisciplinary field From evolutionary theory to cultural evolution this book fills gaps in the

readers knowledge from various backgrounds and introduces them to thought leaders in human evolution research Offers comprehensive coverage of the wide ranging field of human evolution Written for a non expert audience providing accessible and convenient content that will appeal to numerous readers across the interdisciplinary field Provides expertise from leading minds in the field Allows the reader the ability to gain exposure to various topics in one publication *Chimpanzees and Human Evolution* Martin N. Muller, Richard W. Wrangham, David R. Pilbeam, 2017-11-27 Knowledge of wild chimpanzees has expanded dramatically This volume edited by Martin Muller Richard Wrangham and David Pilbeam brings together scientists who are leading a revolution to discover and explain human uniqueness by studying our closest living relatives Their conclusions may transform our understanding of human evolution *Homo Novus - A Human Without Illusions* Ulrich J. Frey, Charlotte Störmer, Kai P. Willführ, 2010-08-24 Converging evidence from disciplines including sociobiology evolutionary psychology and human biology forces us to adopt a new idea of what it means to be a human As cherished concepts such as free will naive realism humans as creation s crowning glory fall and our moral roots in ape group dynamics become clearer we have to take leave of many concepts that have been central to defining our humanness What emerges is a new human the homo novus a human being without illusions Leading authors from many different fields explore these issues by addressing a range of illusions and providing evidence for the need despite considerable reluctance to relinquish some of our most cherished ideas about ourselves *Human Evolutionary Demography* Oskar Burger, Ronald Lee, Rebecca Sear, 2024-06-14 Human evolutionary demography is an emerging field blending natural science with social science This edited volume provides a much needed interdisciplinary introduction to the field and highlights cutting edge research for interested readers and researchers in demography the evolutionary behavioural sciences biology and related disciplines By bridging the boundaries between social and biological sciences the volume stresses the importance of a unified understanding of both in order to grasp past and current demographic patterns Demographic traits and traits related to demographic outcomes including fertility and mortality rates marriage parental care menopause and cooperative behavior are subject to evolutionary processes Bringing an understanding of evolution into demography therefore incorporates valuable insights into this field just as knowledge of demography is key to understanding evolutionary processes By asking questions about old patterns from a new perspective the volume composed of contributions from established and early career academics demonstrates that a combination of social science research and evolutionary theory offers holistic understandings and approaches that benefit both fields Human Evolutionary Demography introduces an emerging field in an accessible style It is suitable for graduate courses in demography as well as upper level undergraduates Its range of research is sure to be of interest to academics working on demographic topics anthropologists sociologists demographers natural scientists working on evolutionary processes and disciplines which cross cut natural and social science such as evolutionary psychology human behavioral ecology cultural evolution and evolutionary medicine As an accessible introduction it should interest readers

whether or not they are currently familiar with human evolutionary demography **Mahale Chimpanzees** Michio Nakamura, Kazuhiko Hosaka, Noriko Itoh, Koichiro Zamma, 2015-09-10 Long term ecological research studies are rare and invaluable resources particularly when they are as thoroughly documented as the Mahale Mountain Chimpanzee Project in Tanzania Directed by Toshisada Nishida from 1965 until 2011 the project continues to yield new and fascinating findings about our closest neighbour species In a fitting tribute to Nishida's contribution to science this book brings together fifty years of research into one encyclopaedic volume Alongside previously unpublished data the editors include new translations of Japanese writings throughout the book to bring previously inaccessible work to non Japanese speakers The history and ecology of the site chimpanzee behaviour and biology and ecological management are all addressed through firsthand accounts by Mahale researchers The authors highlight long term changes in behaviour where possible and draw comparisons with other chimpanzee sites across Africa to provide an integrative view of chimpanzee research today **Medicine and Evolution** Sarah Elton, Paul O'Higgins, 2008-06-02 Can an evolutionary perspective be integrated in day to day practice and is it of value in medical education and training If so when and how Highlighting exciting areas of research into the evolutionary basis of health and disease *Medicine and Evolution Current Applications and Future Prospects* answers these questions and more I **Offspring** National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Population, Panel for the Workshop on the Biodemography of Fertility and Family Behavior, 2003-05-04 Despite recent advances in our understanding of the genetic basis of human behavior little of this work has penetrated into formal demography Very few demographers worry about how biological processes might affect voluntary behavior choices that have demographic consequences even though behavioral geneticists have documented genetics effects on variables such as parenting and divorce *Offspring Human Fertility Behavior in Demographic Perspective* brings together leading researchers from a wide variety of disciplines to review the state of research in this emerging field and to identify promising research directions for the future **The Evolutionary Biology of the Human Pelvis** Cara M. Wall-Scheffler, Helen K. Kurki, Benjamin M. Auerbach, 2020-01-16 Synthesizes and re examines the evolution of the human pelvis which sits at the interface between locomotion and childbirth **The Oxford Handbook of Evolutionary Medicine** Martin Brüne, Wulf Schiefenhövel, 2019-01-31 Medicine is grounded in the natural sciences where biology stands out with regard to our understanding of human physiology and the conditions that cause dysfunction Ironically though evolutionary biology is a relatively disregarded field One reason for this omission is that evolution is deemed a slow process Indeed the macroanatomical features of our species have changed very little in the last 300 000 years A more detailed look however reveals that novel ecological contingencies partly in relation to cultural evolution have brought about subtle changes pertaining to metabolism and immunology including adaptations to dietary innovations as well as adaptations to the exposure to novel pathogens Rapid pathogen evolution and evolution of cancer cells cause major problems for the immune system

Moreover many adaptations to past ecologies have actually turned into risk factors for somatic disease and psychological disorder in our modern worlds i.e. mismatch among which epidemics of autoimmune diseases cardiovascular diseases diabetes and obesity as well as several forms of cancer stand out One could add depression anxiety and other psychiatric conditions to the list The Oxford Handbook of Evolutionary Medicine is a compilation of up to date insights into the evolutionary history of ourselves as a species exploring how and why our evolved design may convey vulnerability to disease Written in a classic textbook style emphasising physiology and pathophysiology of all major organ systems the Oxford Handbook of Evolutionary Medicine is valuable reading for students as well as scholars in the fields of medicine biology anthropology and psychology

Breast-Feeding: Early Influences on Later Health Gail Ruth Goldberg, Andrew Prentice, Ann Prentice, Suzanne Filteau, Kirsten Simondon, 2008-11-27 Breast Feeding Early Influences on Later Health is a new book which draws together areas of research in early life programming of adult health with a unique focus on the post natal period in terms of early life programming particularly the extent to which differences in infant feeding practices can lay an indelible imprint on metabolism and behaviour and hence affect later function and risk of disease This is an area where there is much less information currently available than there is for fetal programming and the book raises many new questions and highlights numerous areas where further research is needed The book chapters are arranged in three core sections Chapters 1-4 lay down some of the basic biology of early life development Chapters 5-9 examine how breast milk and breast feeding might programme these processes by acting as modulators of development Chapters 10-17 examine the epidemiological evidence that such effects do indeed exist In addition the book includes unique chapters on the Evolution of human lactation and complementary feeding The Macy Gyrgy Prize Lecture My Milky Way updates on HIV and Breast Feeding and on Early breastfeeding cessation and infant mortality in low income countries and measuring trace immune factors in human milk all important topics that have such a critical impact on child health and survival in many countries

Human Evolutionary Biology Michael P. Muehlenbein, 2010-07-29 A wide ranging and inclusive text focusing on topics in human evolution and the understanding of modern human variation and adaptability

Family, Ties and Care Hans Bertram, Nancy Ehlert, 2011-11-29 Families international the new milestone How may care be secured particularly in ageing societies how may families relatives and friends support each other and live together beyond market reasons How can social welfare be secured How do different countries and different cultures solve the problems they may or may not now or in days to come share with other countries and cultures Families as is found in this publication by internationally renowned experts are the base and well of society's fortune in a humane paradigm Furthermore it is the very backbone of lifelong solidarity in inter generational relations and the very place where the readiness of taking on care and responsibility are experienced and learned The publication's underlying idea opens up two perspectives on the one hand differences and similarities in family life forms are chiselled out on the base of an international cooperation Simultaneously the international authors are called upon to express their ideas

about their own country's future more distinctly and clearly thus distinctions and similarities of the respective paths of development are rather easily perceived Sexual Coercion in Primates and Humans Martin N. Muller, Richard W. Wrangham, 2009-10-19 This book presents extensive field research and analysis to evaluate sexual coercion in a range of species including all of the great apes and humans and to clarify its role in shaping social relationships among males among females and between the sexes *The Anthropology of Obesity in the United States* Anna Bellisari, 2016-03-17 This volume examines the biocultural dimensions of obesity from an anthropological perspective in an effort to broaden understanding of a growing public health concern The United States of America currently has the highest rates of obesity among developed countries with an alarming rise in prevalence in recent decades which promises to affect the nation for years to come Bellisari helps students to grasp the complex nature of this obesity epidemic demonstrating that it is the consequence of many interacting forces which range from individual genetic and physiological predispositions to national policies and American cultural beliefs and practices As much a social problem as an individual one the development of obesity is in fact encouraged by the pattern of high consumption and physical inactivity that is promoted by American economic political and ideological systems With a range of up to date scientific and medical data *The Anthropology of Obesity in the United States* provides students with a comprehensive picture of obesity its multiple causes and the need for society wide action to address the issue
