Resampling Methods For Dependent Data:

Resampling Methods for Dependent Data S. N. Lahiri, 2013-03-09 This is a book on bootstrap and related resampling methods for temporal and spatial data exhibiting various forms of dependence Like the resampling methods for independent data these methods provide tools for statistical analysis of dependent data without requiring stringent structural assumptions This is an important aspect of the resampling methods in the dependent case as the problem of model misspecification is more prevalent under dependence and traditional statistical methods are often very sensitive to deviations from model assumptions Following the tremendous success of Efron's 1979 bootstrap to provide answers to many complex problems involving independent data and following Singh's 1981 example on the inadequacy of the method under dependence there have been several attempts in the literature to extend the bootstrap method to the dependent case A breakthrough was achieved when resampling of single observations was replaced with block resampling an idea that was put forward by Hall 1985 Carlstein 1986 Kiinsch 1989 Liu and Singh 1992 and others in various forms and in different inference problems There has been a vigorous development in the area of resampling methods for dependent data since then and it is still an area of active research This book describes various aspects of the theory and methodology of resampling methods for dependent data developed over the last two decades There are mainly two target audiences for the book with the level of exposition of the relevant parts tailored to each audience
