Emergency Vehicle Approaching Kajsa Weibull,2024-10-17 Driving an emergency vehicle can be difficult The driver of the emergency vehicle must navigate communicate with emergency services often drive at high speeds and take surrounding traffic into account Civilian drivers are required by law to give way to emergency vehicles with lights and sirens activated Despite this they sometimes fail to move over One reason is not noticing the emergency vehicle in time This dissertation aims to understand how technology can support civilian drivers in their interactions with emergency vehicles One form of technology used to make drivers move over is emergency vehicle lighting The results of this dissertation show that alternative designs of emergency vehicle lighting can affect driver behavior and that the current designs are not always suited to promote the most desirable driver behavior Another technological approach to supporting drivers in their interactions with emergency vehicles is the use of Cooperative Intelligent Transport Systems C ITS One C ITS service is the Emergency Vehicle Approaching EVA warning An EVA warning is an early in car warning sent out to the driver before being overtaken by an emergency vehicle providing more time to move over Three driving simulator studies with EVA warnings were conducted in this dissertation The results indicate that EVA warnings make drivers move over more quickly and thereby decrease delay time for emergency vehicles Furthermore there is a learning effect when receiving multiple EVA warnings implying that drivers move over more quickly once they are familiar with the system One of the simulator studies used eye tracking and showed that EVA warnings make drivers scan mirrors earlier compared to when not receiving an EVA warning An EVA warning is distributed based on the most probable path of the emergency vehicle If the driver of the emergency vehicle decides on another route there is a risk of false EVA warnings Therefore this dissertation explored how false alarms and false expectations of EVA warnings affect drivers Receiving false alarms makes drivers move over more slowly in future interactions and negatively affects attitudes toward the EVA system Furthermore wrongly expecting an EVA warning makes drivers less attentive to the road ahead In conclusion both emergency vehicle lighting and EVA warnings can support civilian drivers in their interactions with emergency vehicles It can decrease the risks of both collisions and delays However to implement a large scale deployment of C ITS Sweden needs digital infrastructure to support secure data exchange Att framf ra ett utryckningsfordon r utmanande Utryckningsf raren f
