example is given by the acquisition of an exhausted state of cytotoxic CD8 T cells CTLs responding to chronic infections or tumors that are associated with elevated expression of inhibitory receptors and impaired cytokine response Targeting these major inhibitory pathways by immune checkpoint blockers represents a prime example of successful clinical translation of tumor specific immunotherapies Understanding the mechanisms behind mal adaptations of the immune system is crucial for achieving therapeutic benefits The establishment and co evolution of a dynamic microenvironment niche constituted by the recruitment of numerous cell types dampen immune responses and thus contribute to the development of neoplastic transformation as well as infection Although there are examples of successful immunotherapeutic approaches CAR T cells immune checkpoint inhibitors or mRNA vaccination a large percentage of patients with cancer or chronic infections still do not benefit from these therapies or develop severe immune related adverse events The reasons for these failures are not well understood A possible explanation might be that current immunotherapies target predominantly the effector arm of the immune system by trying to reactivate dysfunctional T cells but do not sufficiently address the influence of the innate immune system and the contributions of the tumor microenvironment TME niche The main problem we would like to address in this special issue is how inappropriate function of the innate immune system affects adaptive immunity and contributes to inefficient anti cancer immunity and chronification of infections The central goal is to provide a more precise understanding of the various common and novel immune evasion mechanisms in cancers and in chronic infections to obtain a detailed map of common and disease specific immune escape checkpoints To that aim we want to compile a wide array of interdisciplinary studies exploring a comparative and multi layered analysis of mechanisms responsible for inefficient immune responses including novel approaches i e multi omics or epigenetic signaling We would also like to combine studies from different fields including basic and clinical immunology oncology and virology microbiology We welcome the submission of Original Research Review Mini Review Methods Case report and Perspective articles that cover but are not limited to the following topics Convergent mechanisms supporting immune escape in preclinical models tumors and chronic infections Convergent evasion mechanisms mediated by tumor infiltrating suppressive cells Treg MDSC macro phages soluble mediators signaling metabolism Convergent immune evasion mechanisms mediated by chronic infection viral or parasite Novel strategies to modulate the TME by direct or indirect targeting of immune suppressor cells Approaches to enhance persistence and resilience of anticancer T cells Combinatorial therapeutic strategies mRNA antibodies immune checkpoint blockers that target convergent immune evasion mechanisms Manuscripts consisting solely of bioinformatics or computational analysis of public genomic or transcriptomic databases which are not accompanied by robust and relevant validation clinical cohort or biological validation in vitro or in vivo are out of scope for this topic

D.), Jennifer Gray, 2012-01-01 Nancy Burns is first named author on previous edition **Novel Strategies Targeting Obesity and Metabolic Diseases, Volume II** Xinran Ma, Lingyan Xu, Yan Lu, Dechun Feng, Nuo Sun, Jiqiu Wang, 2024-02-08 This Research Topic is part of the Novel Strategies Targeting Obesity and Metabolic Diseases series Volume I The 21st century features excessive food availability and prevalent sedentary lifestyle Unsurprisingly obesity has become one of the most serious problems threatening public health with a staggering morbidity mortality rate Obesity is the leading risk factor for a series of metabolic diseases i.e. diabetes cardiovascular disease hypertension non alcoholic hepatic steatosis osteoporosis and certain types of cancer Although

theoretically body weight could be easily controlled by the balance of food intake and caloric burning the rapid and stressful pace of modern society has made the healthy life style of eating less and exercising more hard to achieve its popularity Pharmacotherapeutic solutions targeting appetite or energy expenditure are limited and often with undesired and sometimes dangerous side effects The problem becomes even more complicated when genetic susceptibility for obesity is taken into account In result till now the long and intense battle for obesity intervention still wages and we are in urgent need for effective weight losing strategies
