Treatment of Parkinson's Disease and Aging-Related Movement Disorders Kailiang Wang, Fangang Meng, Yuqing Zhang, Adolfo Ramirez-Zamora, Shin-Yuan Chen, 2024-04-22 Parkinson's disease PD is an age related neurodegenerative disorder characterized by progressive motor disability with a spectrum of non motor symptoms Similar to Parkinson's disease essential tremor dystonia Huntington's disease and other aging related movement disorders are widespread in the elderly with relatively unideal medicine treatment effects In recent years deep brain stimulation DBS has been established as an effective treatment for PD and other aging related movement disorders especially with motor symptoms However there are still many problems to be solved in research work and clinical practice in this field For example it is unclear regarding the most effective stimulation targets or the underlying mechanism of DBS And it is still unknown how to choose the optimal targets among STN GPi PSA VIM etc or if we could choose the nerve fiber for stimulation besides the nuclei And despite wearable sensors could be a powerful tool for the digital evaluation of movement disorders or provide the feedback biomarkers for DBS the closed loop biomarkers for DBS are still lacking Furthermore apart from PD the DBS treatment in gene related dystonia Huntington's disease and other movement disorders also needs to be further explored **Catalog of Publications** United States. Birkmayer, P. Riederer, 2012-12-06 Parkinson's disease is one of the major causes of neurological disability in adult life It has been encountered in all races in every region of the world and shows no preference for either sex In general its initial manifestations begin in the fifth decade of life With the world population showing an increase in numbers of people in the older age groups Parkinson's disease will undoubtedly be encountered with increased frequency in the years to come Though its cause is unknown significant strides in understanding its nature and controlling its symptoms have been made during the

past two decades Contained in this volume is a comprehensive review of the present knowledge of Parkinson s disease Though James Parkinson is credited with the uncovering the illness which now bears his name and his monograph on the Shaking Palsy written in 1817 is truly a medical classic descriptions of this disease can be found in medical writings going back to the time of Galen Indeed he himself was the first to admit that he was not describing a new disease but bringing an old one to the attention of the medical researchers of his time so that it would become a subject of interest and investigation Specifically his objective was the morbid anatomist whose efforts he hoped would bring to light the cause and nature of the disorder This then would become a basis for treatment or even cure *Developments in Aging* United States.
