Research In Protozoology Volume 2:

Research Grants Index National Institutes of Health (U.S.). Division of Research Grants, 1969 *The Biochemistry and Physiology of Tetrahymena* Donald G. Hill, 2012-12-02 The Biochemistry and Physiology of Tetrahymena presents a review of the literature covering the physiology and biochemistry of the ciliate genus Tetrahymena of which Tetrahymena pyriformis is the most studied species Organized into 10 parts this book first provides basic information about Tetrahymena which is found in almost any body of water and is so unusual that one can debate quite rationally as to whether it is an animal or a plant Other chapters are restricted to specific subjects about this organism namely carbohydrate lipid energy protein amino acid purine pyrimidine and nucleic acid metabolism The organism's biochemical genetics vitamin and inorganic requirements and evolution are also shown This book also explores the effect of radiation drugs and hydrostatic pressure on Tetrahymena The documented information presented in this book will be sufficient to stimulate even more interest in the organism

Developmental Aspects of the Cell Cycle Ivan Cameron, 2012-12-02 Developmental Aspects of the Cell Cycle discusses the molecular organelle cellular and organismal levels of cell cycle cell proliferation and cell differentiation It addresses the possible antagonism between the ability of cells to proliferate and to differentiate After brief historical theoretical and methodological background information for each cell system this book concentrates on the mechanisms involved in the regulation of cell proliferation and differentiation The book presents systems in which mass cultures of cells can be induced to undergo a synchronous transition from one cell state to another enabling the amplification of cellular and biochemical events to be analyzed with the available morphological and biochemical techniques Some chapters explain the possibility of cell state production by a microenvironment that occurs at the organismal level in which a series of mitotic and growth steps causes cells proliferation The concluding chapters discuss cell proliferation and differentiation in specific cell system such as embryonic chick and male germ cell This book will appeal to investigators in many disciplines teachers and life sciences students particularly to molecular cellular and developmental biologists Ecology and Classification of North American Freshwater Invertebrates James H. Thorp, Alan P. Covich, 2001-05-11 The First Edition of Ecology and Classification of North American Freshwater Invertebrates has been immensely popular with students and researchers interested in freshwater biology and ecology limnology environmental science invertebrate zoology and related fields The First Edition has been widely used as a textbook and this Second Edition should continue to serve students in advanced classes The Second Edition features expanded and updated chapters especially with respect to the cited references and the classification of North American freshwater invertebrates New chapters or substantially revised chapters include those on freshwater ecosystems snails aquatic spiders aquatic insects and crustaceans Most up to date and informative text of its kind Written by experts in the ecology of various invertebrate groups coverage emphasizes ecological information within a current taxonomic framework Each chapter contains both morphological and taxonomic information including keys to North American taxa
