Advanced Abnormal Child Psychology Michel Hersen, Robert T. Ammerman, 2000-02 There was a time when abnormal child psychology was the stepchild of abnormal psychology with perhaps one or two chapters in an entire advanced textbook devoted to children Given the explosive amount of new research on child development in general since the 1980s stepchild is obviously no longer a valid characterization Indeed in the last 15 years many new journals devoted to childhood problems have made their appearance on library bookshelves The first edition of this book was assembled in an effort to integrate the empirical and clinical literatures and show the advanced undergraduate and beginning graduate student the breadth and depth of our existing knowledge about the disorders that manifest themselves early in development Now since its publication in 1995 a great deal more work has been done This revised and expanded second edition includes much new material from the first edition authors and from several new ones all respected experts in the field Part I offers an overview It outlines historical developments with documentation of the neglect and abuse that children suffered at the hands of society well into the 20th century developmental psychopathology as a theoretical framework to guide research and clinical efforts psychophysiological determinants of behavior with special attention focused on childhood autism and attention deficit and antisocial conduct disorders theoretical methodological and practical considerations involved in determining investigatory paths including sampling design selection measurement data analysis and pragmatics and the reactions of children families and society to complex and diverse child health problems Part II addresses assessment and treatment issues It discusses behavioral treatment of childhood disorders and multiple case examples of commonly used techniques new developments in pharmacological treatment and sound guidelines for the consideration of pharmacotherapy and formulations and a review of preventive interventions Part III examines specific disorders of childhood and adolescence It discusses anxiety disorders affective and mood disorders mental retardation autism specific developmental disorders conduct disorder attention deficit hyperactivity disorder ADHD and eating disorders psychological aspects of pediatric disorders interventions tailored to the needs of the child and family to maximize adaptation and recovery and substance use disorders ranging from models emphasizing social influences to those focusing on biological vulnerabilities Each chapter in Part III has an identical structure clinical description causes course familial contributions psychological and genetic influences current treatments summary and includes numerous case illustrations

book Developmental psychopathology Children's and adolescents behaviors are on a continuum from very adaptive to very maladaptive with only the very severe ends of the spectrum being conceptualized as disorders Diversity inclusion and understanding Special attention is given to issues of race ethnicity gender family constellation religious orientation primary language socioeconomic status and physical differences to help students see the commonalities and differences of abnormal child behavior within a cross cultural and international context New to the 4th edition Completely revised in both structure and content to reflect the DSM 5 Increase coverage of risk factors related to long term effects of sexual abuse and bullying Increased coverage of diversity to include new diversities that have emerged as important i.e. transgender children New research on suicide and suicide prevention Advanced Abnormal Psychology Michel Hersen, Vincent B. Van Hasselt, 2012-12-06 Although senior undergraduate psychology students and first year master's and doctoral level students frequently take courses in advanced abnormal psychology it has been almost two decades since a book by this title has appeared Professors teaching this course have had a wide variety of texts to select from that touch on various aspects of psychopathology but none has been as comprehensive for the student as the present volume Not only are basic concepts and models included but there are specific sections dealing with childhood and adolescent disorders adult and geriatric disorders child treatment and adult treatment We believe the professor and advanced student alike will benefit from having all the requisite material under one cover Our book contains 26 chapters presented in five parts each part preceded by an editor's introduction The chapters reflect updates in the classification of disorders i.e. DSM IV In Part I Basic Concepts and Models the chapters include diagnosis and classification assessment strategies research methods the psychoanalytic model the behavioral model and the biological model Parts II Childhood and Adolescent Disorders and III Adult and Older Adult Disorders bulk of the book To ensure cross each containing seven chapters represent the chapter consistency each of these chapters on psychopathology follows an identical format with the following basic sections description of the disorder epidemiology clinical picture with case description course and prognosis familial and genetic patterns and diagnostic considerations
