Weiner,2016-09-16 In this new fifth edition there is a strong focus on the increasing concern over infrastructure resilience
from the threat of serious storms human activity and population growth The new edition also looks technologies that urban
transportation planners are increasingly focused on such as vehicle to vehicle communications and driver less cars which
have the potential to radically improve transportation This book also investigates the effects of transportation on the health
of travelers and the general public and the ways in which these concerns have become additional factors in the
transportation and infrastructure planning and policy process The development of U S urban transportation policy over the
past half century illustrates the changing relationships among federal state and local governments This comprehensive text
examines the evolution of urban transportation planning from early developments in highway planning in the 1930s to today
s concerns over sustainable development security and pollution control Highlighting major national events the book examines

The volume provides in depth coverage of the most significant event in transportation planning the Federal Aid Highway Act

 Transportation Research Board,1975 The Evaluation of Transportation Investment Projects Joseph
 Berechman,2010-05-26 Throughout the world the use of some kind of a formal transportation project evaluation procedure is
 a requirement Yet by and large these are partial in fact much weight is often placed on the initial pre engineering phases of
 the planning process when vital information such as accurate costs and demand projections is largely missing Moreover
 many of these procedures neglect to consider key issues such as project s risks capital costs financing latent demand market
 imperfections labor force availability and various incompatibilities between trip rates travel times and activity location As a
 result projects which are judged as viable under such deficient evaluation schemes may have had a significantly different
 projection of capital costs and demand should a well founded thorough and efficient evaluation process be used Against this
 background this book s main objective is to construct a comprehensive and methodical economic planning and decision
 making framework for the evaluation of proposed transportation infrastructure investment projects Such a framework is
 founded on four key principles It is based on well established economic transportation and policy analysis theoretical
 principles it is comprehensive enough to encompass all relevant evaluation issues it is applicable to a wide range of
 transportation investment projects and it is amenable to empirical application including a sensitivity analysis and alternative
 scenarios regarding urban regional and national developments **Scientific and Technical Aerospace Reports** ,1977
