The Art Instinct Denis Dutton, 2009 The Dinka have a connoisseur's appreciation of the patterns and colours of the markings on their cattle The Japanese tea ceremony is regarded as a performance art Some cultures produce carving but no drawing others specialize in poetry Yet despite the rich variety of artistic expression to be found across many cultures we all share a deep sense of aesthetic pleasure The need to create art of some form is found in every human society In *The Art Instinct* Denis Dutton explores the idea that this need has an evolutionary basis how the feelings that we all share when we see a wonderful landscape or a beautiful sunset evolved as a useful adaptation in our hunter gather ancestors and have been passed on to us today manifest in our artistic natures Why do people indulge in displaying their artistic skills How can we understand artistic genius Why do we value art and what is it for These questions have long been asked by scholars in the humanities and in literature but this is the first book to consider the biological basis of this deep human need This sparking and intelligent book looks at these deep and fundamental questions and combines the science of evolutionary psychology with aesthetics to shed new light on longstanding questions about the nature of art

[Handbook of Data Processing Management: Advanced technology-systems concepts.](#) M. L. Rubin, editor Martin L. Rubin, 1970 *The Oxford Handbook of Empirical Aesthetics* Marcos Nadal, Oshin Vartanian, 2022-09-22 Humans have engaged in artistic and aesthetic activities since the appearance of our species Our ancestors have decorated their bodies tools and utensils for over 100 000 years The expression of meaning using color line sound rhythm or movement among other means constitutes a fundamental aspect of our species biological and cultural heritage Art and aesthetics therefore contribute to our species identity and distinguish it from its living and extinct relatives Science is faced with the challenge of explaining the natural foundations of such a unique trait and the way

cultural processes nurture it into magnificent expressions historically and ethnically unique How do the human mind and brain bring about these sorts of behaviors What psychological and neural processes underlie the appreciation of painting music and dance How does training modulate these processes Are humans the only species capable of aesthetic appreciation or are other species endowed with the rudiments of this capacity Empirical examinations of such questions have a long and rich history in the discipline of psychology the genesis of which can be traced back to the publication of Gustav Theodor Fechner s *Vorschule der Aesthetik* in 1876 making it the second oldest branch in experimental psychology The Oxford Handbook of Empirical Aesthetics brings together leading experts in psychology neuroimaging art history and philosophy to answer these questions It provides the most comprehensive coverage of the domain of empirical aesthetics to date With sections on visual art dance music and many other art forms and aesthetic phenomena the breadth of this volume s scope reflects the richness and variety of topics and methods currently used today by scientists to understand the way our mind and brain endow us with the faculty to produce and appreciate art and aesthetics

A Theory of the Microdynamics of Occurrent Thought Herbert S. Demmin, 2015-08-13 A Theory of the Microdynamics of Occurrent Thought T2 is based on a reflective analysis of occurrent thoughts OTs in the spirit of phenomenological philosophy and proposes that such thoughts consist of a specific combination of ten or fewer micro phases possessing phenomenal contents that are so brief that most of us are unaware of their existence The theory specifies the

movements of an operating I or central executive in as and among these phases in the service of processing their contents by fleetingly becoming them followed by one of several transitions of attention that bring about different degrees of their objectification The relatively fixed sequences of the phases of OTs along with an operating I s immersion in and face up or face down surfacing from their phenomenal contents form a structure that carries and drives on line cognition supporting the view that they play a causal role in human information processing Two categories two forms and fifteen different types of OTs are defined based on the transitions of an operating I therein This book includes detailed illustrations of the different types of OTs
